**National Highway
Traffic Safety
Administration**

400 Seventh Street, S.W.
Washington, D.C. 20590

Dear Crash Data Researchers/Users:

Thank you for choosing crash data from the National Highway Traffic Safety Administration (NHTSA) for your research or other use. The information contained in this motor vehicle crash report is collected, maintained and distributed in accordance with Public Law 89-564. In accordance with this Public Law, NHTSA is required not to release any case information until completion of quality control procedures. These procedures include a review of the case material to extract all names, licenses and registration numbers, non-coded interview material, non-research related researcher comments in the margins, non-factual data, and the production number portion of the vehicle identification number (VIN).

If you requested NHTSA to query its database files in order to identify a specific crash, then that query was made using non-personal descriptors you provided for use in our search. This motor vehicle crash may have been identified from a data search and matches the general, non-personal descriptors you provided, but we cannot confirm that this is the specific crash report you requested.

If you have any questions with regard to the above procedures, please contact the Field Operations Branch, Crash Investigation Division, National Center for Statistics and Analysis at 202-366-4820. Again, please be advised that we cannot confirm that this is the case that you have specifically requested nor can we certify the information to be correct.

 1993

TECHNICAL SUMMARY

CONTRACTOR: Dynamic Science, Inc.
CONTRACT NUMBER: DTNH22-87C-47169
CASE NUMBER: Case DSI-93-AB-007

[REDACTED]

This two vehicle collision occurred on a six-lane, divided, urban roadway on an early spring weekday afternoon in [REDACTED], North Carolina. It was raining and the roadway was wet.

Vehicle 1, a 1990 Lincoln Town Car, was being driven west in westbound travel lane two at a speed estimated to be between 64 and 72 KPH (40 and 45 MPH) by the restrained, 35 year old female driver (the case occupant). Sitting in the right front seating position was a restrained 11 year old male.

Vehicle 2, a 1979 Ford Mustang three-door, was being driven east in eastbound travel lane two by the unrestrained 21 year old male driver at a speed estimated to be between 72 and 80 KPH (45 and 50 MPH).

The driver of Vehicle 2, in an attempt to change lanes, lost control of his vehicle and began a left side leading skid. Vehicle 2, in this configuration, crossed the raised concrete median and slid into the travel path of Vehicle 1. The entire front plane of Vehicle 1 impacted the left rear side plane of Vehicle 2. At impact the passenger side airbag deployed, but the driver's side airbag did not.

The Delta V for Vehicle 1 was computed, using CRASH III PC, as 16.3 KPH (10.1 MPH) using a CDC of 12FDEW1 and a PDOF of 350 degrees. The combined direct and induced damage width was 175 cm (69 in) and the maximum crush depth was 32 cm (12.6 in) at C₁. The Delta V for Vehicle 2 was computed, using CRASH III PC, as 25.8 KPH (16.1 MPH) using a CDC of 09LZEW3 and a PDOF of 263 degrees. The combined direct and induced damage width was 152 cm (60 in) and the maximum crush depth was 44 cm (17.4 in) at C₄.

After impact, both vehicles came to final rest on the raised concrete median facing south.

The driver of Vehicle 1 (case occupant) sustained minor injuries consisting of contusions and strains; maximum AIS = AIS-1. She was transported to a local hospital where she was treated and released. The right front seating position occupant sustained minor injuries consisting of abrasions and strains; maximum AIS = AIS-1. He was transported to a local hospital where he was treated and released.

The driver of Vehicle 2, according to police, sustained non-incapacitating injuries of unknown nature or severity. His course of treatment could not be determined.

Both vehicles were towed from the scene due to damage sustained in this collision.

This document is disseminated under the sponsorship of the Department of Transportation in the interest of information exchange. The United States Government assumes no responsibility for the contents or use thereof.

The opinions, findings, and conclusions expressed in this publication are those of the authors and not necessarily those of the National Highway Traffic Safety Administration.

The crash investigation process is an inexact science which requires that physical evidence such as skid marks, vehicular damage measurements, and occupant contact points be coupled with the investigator's expert knowledge and experience of vehicle dynamics and occupant kinematics in order to determine the pre-crash, crash, and post-crash movements of involved vehicles and occupants.

Because each crash is a unique sequence of events, generalized conclusions cannot be made concerning the crash-worthiness performance of the involved vehicle(s) or their safety systems.

ACCIDENT DATA:

Location: [REDACTED], North Carolina
Area/Type: Urban/Commercial
Date/Time: Spring/Afternoon
Accident Type: Car/Car - Right Angle

Injury Severity:

Vehicle 1: Driver (case occupant), AIS-1
R/F Occupant, AIS-1
Vehicle 2: Driver, reported non-incapacitating injuries of
unknown nature or severity

AMBIENCE:

Viewing Conditions: Fair, restricted by rain and traffic mist
Cloud Cover: Heavy
Precipitation: Moderate to heavy rain
Temperature: 21 to 24 ° C (70 to 75 ° F)
Road Surface: Wet with standing water

ROADWAY:

	VEHICLE 1	VEHICLE 2
Type:	6-lane, divided with dedicated left turn lanes.	6-lane, divided with dedicated left turn lanes.
Width:	29.6 m (97.2 ft)	29.6 m (97.2 ft)
Traffic Density:	Moderate to heavy	Moderate to heavy
Median:	Raised concrete	Raised concrete
Edge:	1.5 m (5 ft) asphalt paved shoulder	1.2 m (4 ft) asphalt paved shoulder
Surface:	Asphalt paved	Asphalt paved
Reported Defects:	None	None
Co-efficient of Friction (est.):	.80 (wet)	.80 (wet)
Vertical Alignment:	Level	Level
Horizontal Alignment:	Straight	Straight

Traffic Controls:

	VEHICLE 1	VEHICLE 2
Signals:	None	None
Signs:	None	None
Speed Limit:	80 KPH (50 MPH)	80 KPH (50 MPH)
Markings:	Single, solid, white painted line separating shoulder from westbound travel lane 1. Single, broken, white painted line separating westbound travel lanes 1 and 2. Single, solid yellow painted line separating westbound travel lane 2 and raised concrete median. Standard solid, white painted railroad crossing warning in both westbound travel lanes.	Single, solid, white painted line separating shoulder from eastbound travel lane 1. Single, broken, white painted lines separating eastbound travel lanes 1, 2 and 3. Single, broken white painted line separating eastbound travel lane 3 and dedicated left turn lane.

VEHICLES:

	VEHICLE 1	VEHICLE 2
Description:	1990 Lincoln Town Car	1979 Ford Mustang II
Odometer:	123,827 km (76,959 mi)	179,748 km (111,714 mi)
Engine:	V8 / 5.0 L	L4 / 2.3L
Vehicle Modifications:	None	None
Tire Condition:	Good, approximately 40 percent of tread remained. No abnormal tread wear patterns.	Poor, less than 10 percent of tread remained. Tread wear patterns indicate faulty wheel alignment.
Manual Restraints:	3-point, manual lap/shoulder restraints at L/F, R/F, L/R and R/R seating positions. 2-point manual lap restraints at C/F and C/R seating positions.	3-point, manual lap/shoulder restraints at L/F, R/F seating positions. 2-point manual lap restraints at L/R, C/R and R/R seating positions.
Automatic Restraints:	Driver's and passenger's side airbag	None

Object Struck:	Vehicle 2	Vehicle 1
Event Number:	1	1
CDC:	12FDEW1	09LZEW3
Maximum Crush:	32 cm (12.6 in) at C ₁	44 cm (17.4 in) at C ₄

VEHICLE VELOCITY ESTIMATES:

	VEHICLE 1	VEHICLE 2
Impact Speed: (estimated)	64-72 KPH (40-45 MPH)	56-64 KPH (35-40 MPH)
Total Delta V:	16.3 KPH (10.1 MPH)	25.8 KPH (16.1 MPH)
Longitudinal Delta V:	-16.0 KPH (-10.0 MPH)	-3.1 KPH (-2.0 MPH)
Lateral Delta V:	2.8 KPH (1.8 MPH)	25.6 KPH (15-9 MPH)
Energy Dissipation:	34,952.7 joules (25,776.4 ft-lb)	48,023.1 joules (35,415.3 ft-lb)

Calculations based upon: CRASH III PC, damage only routine.
No other calculations due to lack of residual scene evidence.

COLLISION SEQUENCE:

Pre-Crash:

This two vehicle collision occurred during the afternoon hours of a spring weekday on an east/west six-lane, divided, asphalt paved, urban/commercial roadway in [REDACTED], North Carolina. The weather was cloudy, it was raining, the roadway was wet and there was standing water on the road surface. Viewing conditions were restricted by the moderate to heavy rainfall. Traffic density was moderate to heavy. The posted speed limit is 80 KPH (50 MPH).

The westbound road consists of a 1.5m (5 ft) asphalt paved shoulder separated from the north edge of westbound travel lane one by a single, solid, white painted line. Westbound travel lanes one and two are separated by single, broken, white painted lines. The south edge of travel lane two is separated from the yellow painted, raised concrete median by a single, solid, yellow painted line. In each westbound travel lane there is a white painted 2.4m x 4.9m (8 ft. x 16 ft.) railroad crossing warning applied to the road surface.

The eastbound roadway consists of a 1.2m (4 ft) asphalt paved shoulder separated from the south edge of eastbound travel lane one by a single, solid, white painted line. Eastbound travel lanes one, two and three are separated by single, broken, white painted lines. The north edge of eastbound travel lane three is separated from the dedicated left turn lane by single, broken, white painted lines and a yellow painted, raised concrete traffic channelizer. The north edge of the left turn lane is the yellow painted, raised concrete median.

Vehicle 1, a 1990 Lincoln Town Car, was being driven west in westbound travel lane two at a speed estimated to be between 64 and 72 KPH (40 and 45 MPH) by the 35 year old female driver (the case occupant), who was restrained by the available 3-point manual lap/shoulder safety restraint. Seated in the right front seating position was an 11 year old male who was restrained by the available 3-point manual lap/shoulder safety restraint.

Vehicle 2, a 1979 Ford Mustang three-door, was being driven east in eastbound travel lane two at a speed estimated to be between 72 and 80 KPH (45 and 50 MPH) by the 21 year old male driver who was not wearing the available 3-point manual lap/shoulder safety restraint.

While in the process of moving from eastbound travel lane two to eastbound travel lane three, the back wheels of Vehicle 2 lost traction on the wet roadway surface and the vehicle began a yaw to the right. The driver over-corrected and Vehicle 2 began a left side leading slide across

the eastbound left turn lane, the raised concrete median and into westbound travel lane two and the travel path of Vehicle 1.

As Vehicle 2 entered the travel path of Vehicle 1, the driver of Vehicle 1 steered right and braked in an effort to avoid Vehicle 2.

Crash:

The avoidance actions by the driver of Vehicle 1 were unsuccessful and the front plane of Vehicle 1 impacted the left rear side plane of Vehicle 2 in a right angle configuration. The Delta V for Vehicle 1 was computed, using CRASH III PC, as 16.3 KPH (10.1 MPH) using a CDC of 12FDEW1 and a PDOF of 350 degrees. The combined direct and induced damage width was 175 cm (69 in) and the maximum crush depth was 32 cm (12.6 in) at C₁. The Delta V for Vehicle 2 in this impact was computed, using CRASH III PC, as 25.8 KPH (16.1 MPH) using a CDC of 09LZEW3 and a PDOF of 263 degrees. The combined direct and induced damage width was 152 cm (60 in) and the maximum crush depth was 44 cm (17.4 in) at C₄.

The forces in this impact apparently equaled or exceeded the manufacturer's minimum threshold in the supplemental restraint system and the passenger side airbag deployed. However, the forces were apparently insufficient to trigger the driver's airbag and it DID NOT deploy.

Post Crash:

After impact, Vehicle 1 rotated approximately 105 degrees counter-clockwise and came to final rest facing south-southeast astraddle the raised concrete median approximately 15.2 m (50 ft) west of POI. Vehicle 2, which was astraddle the median at impact, did not rotate and came to final rest facing south approximately 9.8 m (32 ft) west of POI.

Occupant Kinematics:

The 35 year old female driver of Vehicle 1 was seated on a split bench seat with separate backs in a normal, upright position with her right foot on the brake pedal and her left foot on the floor/toe pan. Both hands were on the steering wheel rim at the 10:00 and 2:00 o'clock positions. The driver is 163 cm (64 in) in height and weighs 61 kg (135 lb).

During the on-site vehicle inspection the driver's six-way power seat was found to be adjusted to the full forward and full upward positions. The seat back was adjusted to a normal, upright configuration. During the interview with the driver, she confirmed that the seat was in its normal position for her when she was driving and had not been changed since the accident.

The driver of Vehicle 1 (the case occupant) was wearing the available manual lap/shoulder safety restraint in a normal manner - the shoulder restraint across the left shoulder and chest, and the lap restraint across the lower abdomen and upper thighs. At impact, the driver was projected forward, loading the shoulder restraint which resulted in a contusion of the lower right chest. Her head continued forward and downward resulting in a cervical strain. The driver's hips slid forward on the leather covered seat and she began to submarine the lap restraint which resulted in a contusion to the lower abdomen and strains to the muscles in the right hip and lower back.

In addition, as Vehicle 1 began the counter-clockwise rotation, the driver's head contacted the left front window glazing resulting in a contusion to the left jaw.

Occupant 2, sitting in the right front seating position, was wearing the available manual lap/shoulder restraints in a normal manner. The right front seat was adjusted to a point midway between the full forward and the center positions. The seat back was reclined approximately 5 degrees. This occupant is 147 cm (58 in) in height and weighs 39 kg (86 lb) and he had both feet on the right front floor pan. The position of his hands is unknown. At impact, Occupant 2 was projected forward loading the lap/shoulder restraints and as his head continued forward his face made contact with the passenger side airbag as it deployed. He sustained abrasions to his chin and lower lip from this contact. In addition, as his head continued forward as he loaded the safety restraints, he sustained a cervical strain.

Airbag System:

Vehicle 1 was a 1990 Lincoln Town Car equipped with a driver and passenger side airbag. At impact with Vehicle 2, the passenger side airbag deployed while the driver's side airbag did not. The owner of Vehicle 1 contends that if the passenger's airbag deploys so then should the driver's side airbag deploy. The owner further contends that the supplemental restraint system installed in his vehicle was defective.

During the on-site inspection by Dynamic Science, Inc. 22 days post accident and within 72 hours of notification, it was determined that the passenger side airbag was manufactured by TRW. Imprinted on the top side of the airbag, in red ink, was the number 002511 and a capital letter "I" over the number. The deployed airbag width measured 68.6 cm (27 in) from seam to seam and had an inflated volume of approximately .24 m³ (8 ft³). Imprinted on the backside of the module trim cover were two codes - TRW91317C and CAV9. Also, during this initial inspection, the deployed airbag had four vertical fold creases, two at each edge of the airbag, near the edge seam stitching.

The airbag was vented by two ports located on each side of the bag near the instrument panel and away from the right front passenger. Each port measured approximately 4.8 cm (1.9 in) in diameter. The airbag did not appear to be tethered, and there was no evidence of occupant contact found on the airbag fabric.

During the initial vehicle inspection, the SRS light on the instrument panel flashed seven times when the ignition switch was turned on. Section 41-58, Restraint System - Supplemental Airbag, of the Ford Motor Company Repair Manual states on page 41-58-40 that seven flashes of the SRS light indicates that the "... passenger airbag circuit is inoperative." As the passenger side airbag had deployed, this appear to be a correct diagnosis.

At the completion of the field inspection of Vehicle 1, the vehicle was removed to a local Lincoln-Mercury services facility for a more complete diagnostic test and an in-depth inspection of the Supplemental Restraint System. These tests were monitored by this investigator, a representative of the Ford Motor Company, and the service facility manager. A Ford Motor Company engineer assisted in the various tests by telephone.

The Supplemental Restraint System was tested for voltage and resistance levels as were the individual components of the system. The results of each test were well within the manufacturer's specifications. At the completion of these various tests, each component was removed for a visual inspection and their condition, part numbers and serial numbers are listed below. All components, except the driver's side undeployed airbag module and the wiring harness, are submitted with this report.

- 1) Driver's side airbag module. - Not deployed
Serial and part numbers: [REDACTED]

This component was re-attached to Vehicle 1 - the service facility refused to deploy the module for transport.

- 2) Passenger side airbag module. - Deployed
Codes on airbag fabric: [REDACTED]
Codes on module trim cover: [REDACTED]

Serial and part numbers: [REDACTED]

▽ [REDACTED]

Upper right corner of instrument panel, behind the module, was broken.

- 3) Right front sensor. - in R/F fender, no apparent damage.
Serial and part numbers: [REDACTED]
[REDACTED]
- 4) Center front sensor. - on hood latch support, no apparent damage.
Serial and part numbers: [REDACTED]
[REDACTED]
- 5) Left front sensor. - in L/F fender - mounting flanges are deformed.
Serial and part numbers: [REDACTED]
[REDACTED]
- 6) Rear sensor. - Left cowl side panel - no apparent damage.
Serial and part numbers: [REDACTED]
[REDACTED]
- 7) Diagnostic module - Behind center instrument panel - no apparent damage.
Serial and part numbers: [REDACTED]
▽ [REDACTED] w/foam
▽ [REDACTED]
- 8) Timer Delay. - Behind center instrument panel - no apparent damage.
Serial and part numbers: [REDACTED]
[REDACTED]

While conducting the tests at the service facility, Vehicle 1 was placed on a vehicle lift and raised for an undercarriage inspection. This inspection revealed no scrapes, scratches or other damage that could be attributed to the events of the collision. The Energy Absorbing Devices (EADs) on the front bumper were inspected at this time. The right front EAD appeared to be at its normal extension and there was no evidence of compression. The left front EAD had "stroked" 2.5 cm (1.0 in) during the collision.

Based on vehicle inspection, reconstruction data, and interviews with engineers in the airbag industry and [REDACTED], the following information was developed:

- 1) the maximum crush for Vehicle 1 was 32 cm (12.6 in) at C₁;
- 2) The Delta V for Vehicle 1 was 16.3 KPH (10.1 MPH);
- 3) The manufacturer's SRS threshold for the 1990 Lincoln Town Car is 13 to 23 KPH (8 to 14 MPH);
- 4) In early Lincoln Town Cars with double airbags, there was a higher impedance at the driver's side airbag module than at the passenger side airbag module and an approximately two millisecond overlap at the diagnostic module.

It would appear that, based upon the manufacturer's SRS threshold and the Delta V for Vehicle 1, the forces in this collision were marginal and that, coupled with the mismatched impedance of the two airbags, when the pulse was sent, only enough "trickled" through to activate and deploy the passenger side airbag. The pulse was not strong enough, or long enough, to overcome the stronger resistance in the driver's side airbag and it did not deploy.

It is this investigator's opinion that the Supplemental Restraint System in Vehicle 1 was not defective, and that it performed within design parameters.

Scene Clearance: The driver of Vehicle 1 (the case occupant) sustained minor injuries consisting of contusions and muscle strains; maximum AIS = AIS-1. She did not require assistance in exiting the vehicle, and was transported to a local hospital where she was treated and released. Occupant 2 sustained minor injuries consisting of abrasions and a muscle strain; maximum AIS = AIS-1. He did not require assistance in exiting the vehicle, and was transported to a local hospital where he was treated and released. No extrication procedures were required to gain access to the occupants of Vehicle 1.

The driver of Vehicle 2 would not cooperate with this investigation due to pending litigation. However, according to police officers, the driver sustained non-incapacitating injuries of unknown nature or severity. He was transported to a local hospital, but his course of treatment could not be determined.

Both Vehicle 1 and Vehicle 2 were towed from the scene due to damage sustained in this collision.

Safety Standards: There were no violations of Federal Motor Vehicle Safety Standards and Regulations found during the complete inspections of Vehicle 1 and Vehicle 2.

Prior Vehicle Damage:

Vehicle 1 had been involved in two prior accidents according to the owner. This was confirmed by a local body repair shop and the local Lincoln-Mercury service facility.

The first confirmed accident damage was in [REDACTED] 1992. Vehicle 1 sustained damage to the back bumper and the two back fenders when it was involved in a rear-end collision. Repair costs were approximately \$1,300 and included replacing the rear bumper and bumper facia. There were stress buckles to the right and left back fenders as a result of this collision that were not repaired.

The second confirmed collision occurred on or about [REDACTED] 1992. Vehicle 1 sustained damage to the left front that included the left front bumper, left front fender, hood, grille and headlight/side marker light assembly. The repair costs for this damage were \$2,262.55 and the repairs were completed in [REDACTED] 1993. In addition, the owner had the engine and drive train inspected for possible damage by the local Lincoln-Mercury service facility. No damage to the engine or drive train was found during the inspection.

The auto body repair shop manager stated in an interview that neither airbag deployed in the two prior accidents, and that he personally had inspected the vehicle's SRS components and had found no apparent damage. He further stated that he had not personally conducted any diagnostic tests to the SRS, but that the local Lincoln-Mercury service facility may have. The Lincoln-Mercury service facility had no record of any diagnostic test on the system after either of the accidents.

DRIVER AND OTHER OCCUPANTS:

CODES FOR CLASS OF VEHICLE

- (00) Not a motor vehicle
- (01) Subcompact/mini (wheelbase < 254 cm)
- (02) Compact (wheelbase ≥ 254 but < 265 cm)
- (03) Intermediate (wheelbase ≥ 265 but < 278 cm)
- (04) Full size (wheelbase ≥ 278 but < 291 cm)
- (05) Largest (wheelbase ≥ 291 cm)
- (09) Unknown passenger car size
- (11) Compact utility vehicle
- (12) Large utility vehicle (≤ 4,500 kgs GVWR)
- (13) Passenger van (≤ 4,500 kgs GVWR)
- (14) Other van (≤ 4,500 kgs GVWR)
- (15) Pickup truck (≤ 4,500 kgs GVWR)
- (18) Other truck (≤ 4,500 kgs GVWR)
- (19) Unknown light truck type
- (20) School bus
- (21) Other bus
- (22) Truck (> 4,500 kgs GVWR)
- (23) Tractor without trailer
- (24) Tractor-trailer(s)
- (25) Motored cycle
- (28) Other vehicle
- (99) Unknown

CODES FOR GENERAL AREA OF DAMAGE (GAD)

CDS APPLICABLE AND OTHER VEHICLES

- (O) Not a motor vehicle
- (N) Noncollision
- (F) Front
- (R) Right side
- (L) Left side
- (B) Back
- (T) Top
- (U) Undercarriage
- (9) Unknown

TDC APPLICABLE VEHICLES

- (O) Not a motor vehicle
- (N) Noncollision
- (F) Front
- (R) Right side
- (L) Left side
- (B) Back of unit with cargo
area (rear of trailer or
straight truck)
- (D) Back (rear of tractor)
- (C) Rear of cab
- (V) Front of cargo area
- (T) Top
- (U) Undercarriage
- (9) Unknown

CODES FOR VEHICLE NUMBER OR OBJECT CONTACTED

(01-30) — Vehicle Number

Noncollision

- (31) Overturn — rollover
- (32) Fire or explosion
- (33) Jackknife
- (34) Other intraunit damage (specify):

(35) Noncollision injury

(38) Other noncollision (specify):

(39) Noncollision — details unknown

Collision With Fixed Object

- (41) Tree (≤ 10 cm in diameter)
- (42) Tree (> 10 cm in diameter)
- (43) Shrubbery or bush
- (44) Embankment

(45) Breakaway pole or post (any diameter)

Nonbreakaway Pole or Post

- (50) Pole or post (≤ 10 cm in diameter)
- (51) Pole or post (> 10 cm but ≤ 30 cm in
diameter)
- (52) Pole or post (> 30 cm in diameter)
- (53) Pole or post (diameter unknown)

(54) Concrete traffic barrier

(55) Impact attenuator

(56) Other traffic barrier (includes guardrail)
(specify):

(57) Fence

(58) Wall

(59) Building

(60) Ditch or culvert

(61) Ground

(62) Fire hydrant

(63) Curb

(64) Bridge

(68) Other fixed object (specify):

(69) Unknown fixed object

Collision with Nonfixed Object

(71) Motor vehicle not in-transport

(72) Pedestrian

(73) Cyclist or cycle

(74) Other nonmotorist or conveyance

(75) Vehicle occupant

(76) Animal

(77) Train

(78) Trailer, disconnected in transport

(88) Other nonfixed object (specify):

(89) Unknown nonfixed object

(98) Other event (specify):

(99) Unknown event or object

GENERAL VEHICLE FORM

1. Primary Sampling Unit Number
2. Case Number - Stratum DSE-93-AB-007
3. Vehicle Number 01

VEHICLE IDENTIFICATION

4. Vehicle Model Year 90
Code the last two digits of the model year
(99) Unknown
5. Vehicle Make (specify): 13
LINCOLN
Applicable codes are found in your
NASS Data Collection, Coding and
Editing Manual.
(99) Unknown
6. Vehicle Model (specify): 001
TOWN CAR
Applicable codes are found in your
NASS Data Collection, Coding and
Editing Manual.
(999) Unknown
7. Body Type 04
Note: Applicable codes may be found on
the back of this page.
8. Vehicle Identification Number
1LNLMB1F5LY * * * * *
Left justify; Slash zeros and letter Z (0 and Z)
No VIN—Code all zeros
Unknown—Code all nine's

OFFICIAL RECORDS

9. Police Reported Vehicle Disposition 1
(0) Not towed due to vehicle damage
(1) Towed due to vehicle damage
(9) Unknown
10. Police Reported Travel Speed 072
Code to the nearest kph (NOTE: 000 means
less than 0.5 kph)
(160) 159.5 kph and above
(999) Unknown
45 mph X 1.6093 = 072 kph

11. Police Reported Alcohol Presence 0
(0) No alcohol present
(1) Yes (alcohol present)
(7) Not reported
(8) No driver present
(9) Unknown

Note: See variables 37 through 55
(Page 4) for information on Other Drugs

12. Alcohol Test Result For Driver 96
Code actual value (decimal implied
before first digit—0.xx)
(95) Test refused
(96) None given
(97) AC test performed, results unknown
(98) No driver present
(99) Unknown

Source: PAR

ACCIDENT RELATED

13. Speed Limit 080
(000) No statutory limit
Code posted or statutory speed limit
in kph
(999) Unknown
50 mph X 1.6093 = 080 kph
14. Attempted Avoidance Maneuver 09
(00) No impact
(01) No avoidance actions
(02) Braking (no lockup)
(03) Braking (lockup)
(04) Braking (lockup unknown)
(05) Releasing brakes
(06) Steering left
(07) Steering right
(08) Braking and steering left
(09) Braking and steering right
(10) Accelerating
(11) Accelerating and steering left
(12) Accelerating and steering right
(97) No driver present
(98) Other action (specify):
(99) Unknown
15. Accident Type 65
Applicable codes may be found on the
back of page two of this field form
(00) No impact
Code the number of the diagram that
best describes the accident circumstance
(98) Other accident type (specify):
(99) Unknown

**** SKIP TO VARIABLE GV37 IF GV07 DOES NOT EQUAL 01-49 ****

CODES FOR BODY TYPE

BEST AVAILABLE COPY

CDS APPLICABLE VEHICLES

Automobiles

- (01) Convertible (excludes sun-roof, t-bar)
- (02) 2-door sedan, hardtop, coupe
- (03) 3-door/2-door hatchback
- (04) 4-door sedan, hardtop
- (05) 5-door/4-door hatchback
- (06) Station wagon (excluding van and truck based)
- (07) Hatchback, number of doors unknown
- (08) Other automobile type (specify):

- (09) Unknown automobile type

Automobile Derivatives

- (10) Auto based pickup (includes El Camino, Caballero, Ranchero, Brat, and Rabbit pickup)
- (11) Auto based panel (cargo station wagon, auto based ambulance/hearse)
- (12) Large limousine - more than four side doors or stretched chassis
- (13) Three-wheel automobile or automobile derivative

Utility Vehicles ($\leq 4,500$ kgs GVWR)

- (14) Compact utility (Jeep CJ-2 - CJ-7, Scrambler, Golden Eagle, Renegade, Laredo, Wrangler, Cherokee [84 and after], Dispatcher, Raider, Bronco II, Bronco [76 and before], Explorer, S-10 Blazer, Geo Tracker, Bravada, S-15 Jimmy, Thing, Pathfinder, Trooper, Trooper II, Rodeo, Amigo, Navajo, 4-Runner, Montero, Samurai, Sidekick, Rocky)
- (15) Large utility (includes Jeep Cherokee [83 and before], Ramcharger, Trailduster, Bronco-fullsize [78 and after], fullsize Blazer, fullsize Jimmy, Landcruiser, Rover, Scout)
- (16) Utility station wagon (Chevy Suburban, GMC Suburban, Travelall, Grand Wagoneer, includes suburban limousine)
- (19) Utility, unknown body type

Van Based Light Trucks ($\leq 4,500$ kgs GVWR)

- (20) Minivan (Chrysler Town and Country, Caravan, Grand Caravan, Voyager, Grand Voyager, Mini-Ram, Dodge/Plymouth Vista, Aerostar, Villager, Lumina APV, Trans Sport, Silhouette, Astro, Safari, Toyota Van, Toyota Minivan, Previa, Nissan Minivan, Quest, Mitsubishi Minivan, Vanagon/Camper.)
- (21) Large van (B150-B350, Sportsman, Royal, Maxiwagon, Ram, Tradesman, Voyager [83 and before], E150-E350, Econoline, Clubwagon, Chateau, G10-G30, Chevy Van, Beauville, Sport Van, G15-G35, Rally Van, Vandura.)
- (22) Step van or walk-in van ($\leq 4,500$ kgs GVWR)
- (23) Van based motorhome ($\leq 4,500$ kgs GVWR)
- (24) Van based school bus ($\leq 4,500$ kgs GVWR)
- (25) Van based other bus ($\leq 4,500$ kgs GVWR)
- (28) Other van type (Hi-Cube Van, Kary) (specify):

- (29) Unknown van type

Light Conventional Trucks (Pickup style cab, $\leq 4,500$ kgs GVWR)

- (30) Compact pickup (D50, Colt P/U, Ram 50, Dakota, Arrow Pickup [foreign], Ranger, Courier, S-10, T-10, LUV, S-15, T-15, Sonoma, Datsun/Nissan Pickup, P'up, Mazda Pickup, Toyota Pickup, Mitsubishi Pickup)
- (31) Large Pickup (Jeep Pickup, Comanche, Ram Pickup, D100-D350, W100-W350, F100-F350, C10-C35, K10-K35, R10-R35, V10-V35, Silverado, Sierra, R100-R500.)

- (32) Pickup with slide-in camper
- (33) Convertible pickup
- (39) Unknown pickup style light conventional truck type

Other Light Trucks ($\leq 4,500$ kgs GVWR)

- (40) Cab chassis based (includes rescue vehicles, light stake, dump, and tow truck)
- (41) Truck based panel
- (42) Light truck based motorhome (chassis mounted)
- (45) Other light conventional truck type
- (48) Unknown light truck type
- (49) Unknown light vehicle type (automobile, utility, van, or light truck)

OTHER VEHICLES

Buses (Excludes Van Based)

- (50) School bus (designed to carry students, not cross country or transit)
- (58) Other bus type (e.g., transit, intercity, bus based motorhome) (specify):

- (59) Unknown bus type

Medium/Heavy Trucks ($> 4,500$ kgs GVWR)

- (60) Step van ($> 4,500$ kgs GVWR)
- (61) Single unit straight truck ($4,500$ kgs $<$ GVWR $\leq 8,850$ kgs)
- (62) Single unit straight truck ($8,850$ kgs $<$ GVWR $\leq 12,000$ kgs)
- (63) Single unit straight truck ($> 12,000$ kgs GVWR)
- (64) Single unit straight truck, GVWR unknown
- (65) Medium/heavy truck based motorhome
- (67) Truck-tractor with no cargo trailer
- (68) Truck-tractor pulling one trailer
- (69) Truck-tractor pulling two or more trailers
- (70) Truck-tractor (unknown if pulling trailer)
- (78) Unknown medium/heavy truck type
- (79) Unknown truck type (light/medium/heavy)

Motored Cycles (Does Not Include All-Terrain Vehicles/Cycles)

- (80) Motorcycle
- (81) Moped (motorized bicycle)
- (82) Three-wheel motorcycle or moped
- (88) Other motored cycle (minibike, motorscooter) (specify):
- (89) Unknown motored cycle type

Other Vehicles

- (90) ATV (All-Terrain Vehicle) and ATC (All-Terrain Cycle)
- (91) Snowmobile
- (92) Farm equipment other than trucks
- (93) Construction equipment other than trucks
- (97) Other vehicle type
- (99) Unknown body type

24. Rollover 0

- (0) No rollover (no overturning)
- Rollover (primarily about the longitudinal axis)*
- (1) Rollover, 1 quarter turn only
- (2) Rollover, 2 quarter turns
- (3) Rollover, 3 quarter turns
- (4) Rollover, 4 or more quarter turns (specify):
-
- (5) Rollover--end-over-end (i.e., primarily about the lateral axis)
- (9) Rollover (overturn), details unknown

OVERRIDE/UNDERRIDE (THIS VEHICLE)

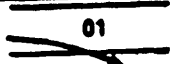

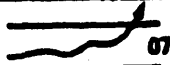

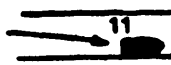

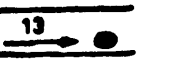

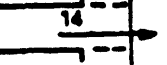

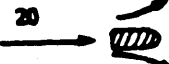

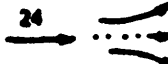

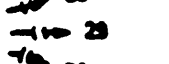

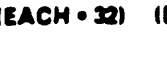

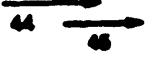

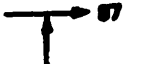

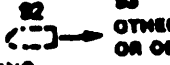

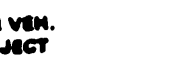

25. Front Override/Underride (this Vehicle) φ
26. Rear Override/Underride (this Vehicle) φ
- (0) No override/underride, or
not an end-to-end impact
- Override (see specific CDC)*
- (1) 1st CDC
- (2) 2nd CDC
- (3) Other not automated CDC (specify):

- Underride (see specific CDC)*
- (4) 1st CDC
- (5) 2nd CDC
- (6) Other not automated CDC (specify):

- (7) Medium/heavy truck or bus override
- (9) Unknown

HEADING ANGLE AT IMPACT FOR HIGHEST DELTA V

- Values: (000)-(359) Code actual value
(997) Noncollision
(998) Impact with object
(999) Unknown
27. Heading Angle For This Vehicle 2 7 3
28. Heading Angle For Other Vehicle 1 7 3

29. Basis for Total Delta V (highest)

1*Delta V Calculated*

- (1) CRASH program—damage only routine
- (2) CRASH program—damage and trajectory routine
- (3) Missing vehicle algorithm

Delta V Not Calculated

- (4) At least one vehicle (which may be this vehicle) is beyond the scope of an acceptable reconstruction program, regardless of collision conditions.
- (5) All vehicles within scope (CDC applicable) of CRASH program but one of the collision conditions is beyond the scope of the CRASH program or other acceptable reconstruction technique, regardless of adequacy of damage data.
- (6) All vehicle and collision conditions are within scope of one of the acceptable reconstruction programs, but there is insufficient data available.

Codes For DEC Test Results

- (0) No DEC test given
- (1) Passed DEC test
- (2) Failed DEC test
- (3) DEC test given—results unknown
- (8) No driver present
- (9) Unknown if DEC test given

Codes for Specimen Test Results

- (0) No specimen test given
- (1) Drug not found in specimen
- (2) Drug found in specimen
- (7) Specimen test given, results unknown or not obtained
- (8) No driver present
- (9) Unknown if specimen test given

38. Police Reported Drug Evaluation Classification (DEC) Test For Driver ϕ

- (0) No DEC process available or given
- (1) DEC process given, results known
- (2) DEC process given, results unknown
- (3) DEC process available, unknown if given
- (8) No driver present

39. Other Drug Specimen Test Type For Driver ϕ

- (0) No specimen test given
- (1) Blood test
- (2) Urine test
- (3) Other specimen tests (specify):

- (7) Unspecified specimen test
- (8) No driver present
- (9) Unknown if specimen test given

OTHER DATA56. Driver's Zip Code

- (00000) Driver not present
(00001) Driver not a resident of U.S. or territories
Code actual 5-digit zip code
(99999) Unknown

57. Driver's Race/Ethnic Origin 1

- (0) Driver not present
(1) White (non-Hispanic)
(2) Black (non-Hispanic)
(3) White (Hispanic)
(4) Black (Hispanic)
(5) American Indian, Eskimo or Aleut
(6) Asian or Pacific Islander
(8) Other (specify): _____
(9) Unknown

58. Vehicle Special Use (This Trip) φ

- (0) No special use
(1) Taxi
(2) Vehicle used as school bus
(3) Vehicle used as other bus
(4) Military
(5) Police
(6) Ambulance
(7) Fire truck or car
(8) Other (specify): _____
(9) Unknown

ROLLOVER DATA

If GV07 (Body Type) ≠ 1-49, leave GV59-GV63 blank.
If GV24 (Rollover) = 0, then GV59-GV63 must equal 0.
If GV24 = 9, then GV59-GV63 must equal 9.

59. Rollover Initiation Type φ

- (0) No rollover
(1) Trip-over
(2) Flip-over
(3) Turn-over
(4) Climb-over
(5) Fall-over
(6) Bounce-over
(7) Collision with another vehicle
(8) Other rollover initiation type specify): _____
(9) Unknown rollover initiation type

60. Location of Rollover Initiation φ

- (0) No rollover
(1) On roadway
(2) On shoulder—paved
(3) On shoulder—unpaved
(4) On roadside or divided trafficway median
(9) Unknown

61. Rollover Initiation Object Contacted φ φ 62. Location on Vehicle Where Initial Principal Tripping Force Is Applied φ

- (0) No rollover
(1) Wheels/tires
(2) Side plane
(3) End plane
(4) Undercarriage
(5) Other location on vehicle (specify): _____
(8) Non-contact rollover forces (specify): _____
(9) Unknown

63. Direction of Initial Roll φ

- (0) No rollover
(1) Roll right - primarily about the longitudinal axis
(2) Roll left - primarily about the longitudinal axis
(5) End-over-end (i.e., primarily about the lateral axis)
(9) Unknown roll direction

PRECRASH DATA64. Pre-Event Movement (Prior to Recognition of Critical Event) φ 1

- (01) Going straight
(02) Slowing or stopping in traffic lane
(03) Starting in traffic lane
(04) Stopped in traffic lane
(05) Passing or overtaking another vehicle
(06) Disabled or parked in travel lane
(07) Leaving a parking position
(08) Entering a parking position
(09) Turning right
(10) Turning left
(11) Making a U-turn
(12) Backing up (other than for parking position)
(13) Negotiating a curve
(14) Changing lanes
(15) Merging
(16) Successful avoidance maneuver to a previous critical event
(97) Other (specify): _____
(98) No driver present
(99) Unknown

CODES FOR ROLLOVER INITIATION OBJECT CONTACTED

- (00) No rollover
- (01-30) — Vehicle Number

Noncollision

- (31) Turn-over — fall-over
- (33) Jackknife

Collision With Fixed Object

- (41) Tree (≤ 10 cm in diameter)
- (42) Tree (> 10 cm in diameter)
- (43) Shrubbery or bush
- (44) Embankment

- (45) Breakaway pole or post (any diameter)

Nonbreakaway Pole or Post

- (50) Pole or post (≤ 10 cm in diameter)
- (51) Pole or post (> 10 cm but ≤ 30 cm in diameter)
- (52) Pole or post (> 30 cm in diameter)
- (53) Pole or post (diameter unknown)

- (54) Concrete traffic barrier
- (55) Impact attenuator
- (56) Other traffic barrier (includes guardrail)
(specify): _____

- (57) Fence
- (58) Wall
- (59) Building
- (60) Ditch or culvert
- (61) Ground
- (62) Fire hydrant
- (63) Curb
- (64) Bridge
- (68) Other fixed object (specify):

- (69) Unknown fixed object

Collision with Nonfixed Object

- (71) Motor vehicle not in-transport
- (76) Animal
- (77) Train
- (78) Trailer, disconnected in transport
- (88) Other nonfixed object (specify):

- (89) Unknown nonfixed object

- (98) Other event (specify):

- (99) Unknown event or object

PRECRASH DATA (Continued)

65. Critical Precrash Event 6 2*This Vehicle Loss of Control Due To:*

- (01) Blow out or flat tire
- (02) Stalled engine
- (03) Disabling vehicle failure (e.g., wheel fell off) (specify): _____
- (04) Non-disabling vehicle problem (e.g., hood flew up) (specify): _____
- (05) Poor road conditions (puddle, pot hole, ice, etc.) (specify): _____
- (06) Traveling too fast for conditions
- (08) Other cause of control loss (specify): _____
- (09) Unknown cause of control loss

This Vehicle Traveling

- (10) Over the lane line on left side of travel lane
- (11) Over the lane line on right side of travel lane
- (12) Off the edge of the road on the left side
- (13) Off the edge of the road on the right side
- (14) End departure
- (15) Turning left at intersection
- (16) Turning right at intersection
- (17) Crossing over (passing through) intersection
- (19) Unknown travel direction

Other Motor Vehicle In Lane

- (50) Stopped
- (51) Traveling in same direction with lower speed (i.e., lower steady speed or decelerating)
- (52) Traveling in same direction with higher speed
- (53) Traveling in opposite direction
- (54) In crossover
- (55) Backing
- (59) Unknown travel direction of other motor vehicle in lane

Other Motor Vehicle Encroaching Into Lane

- (60) From adjacent lane (same direction)—over left lane line
- (61) From adjacent lane (same direction)—over right lane line
- (62) From opposite direction—over left lane line
- (63) From opposite direction—over right lane line
- (64) From parking lane
- (65) From crossing street, turning into same direction
- (66) From crossing street, across path
- (67) From crossing street, turning into opposite direction
- (68) From crossing street, intended path not known
- (70) From driveway, turning into same direction
- (71) From driveway, across path
- (72) From driveway, turning into opposite direction
- (73) From driveway, intended path not known
- (74) From entrance to limited access highway
- (78) Encroachment by other vehicle—details unknown

Pedestrian or Pedalcyclist, or Other Nonmotorist

- (80) Pedestrian in roadway
- (81) Pedestrian approaching roadway
- (82) Pedestrian - unknown location
- (83) Pedalcyclist or other nonmotorist in roadway (specify): _____
- (84) Pedalcyclist or other nonmotorist approaching roadway (specify): _____
- (85) Pedalcyclist or other nonmotorist—unknown location (specify): _____

Object or Animal

- (87) Animal in roadway
- (88) Animal approaching roadway
- (89) Animal—unknown location
- (90) Object in roadway
- (91) Object approaching roadway
- (92) Object—unknown location

(98) Other critical precrash event (specify): _____

(99) Unknown

For Corrective Actions Attempted see variable GV14
(Attempted Avoidance Maneuver)66. Precrash Stability After Avoidance Maneuver 2

- (0) No avoidance maneuver
- (1) Tracking
- (2) Skidding longitudinally—rotation less than 30 degrees
- (3) Skidding laterally—clockwise rotation
- (4) Skidding laterally—counterclockwise rotation
- (7) Other vehicle loss-of-control (specify): _____
- (8) No driver present
- (9) Precrash stability unknown

67. Precrash Directional Consequences of Avoidance Maneuver (Corrective Action) 1

- (0) No avoidance maneuver
- (1) Vehicle stayed in travel lane where avoidance maneuver was initiated
- (2) Vehicle stayed on roadway but left travel lane where avoidance maneuver was initiated
- (3) Vehicle stayed on roadway, not known if left travel lane where avoidance maneuver was initiated
- (4) Vehicle departed roadway
- (5) Avoidance maneuver initiated off roadway
- (8) No driver present
- (9) Directional consequences unknown

THE EXTERIOR VEHICLE, INTERIOR VEHICLE,
OCCUPANT ASSESSMENT, AND OCCUPANT INJURY FORMS.

EXTERIOR VEHICLE FORM

1. Primary Sampling Unit Number _____

3. Vehicle Number 01

2. Case Number - Stratum DSI-93-AB-007

VEHICLE IDENTIFICATION

VIN 1 L N L M B 1 F 5 L Y * * * * * Model Year 90

Vehicle Make (specify): LINCOLN

Vehicle Model (specify): TOWN CAR

LOCATOR

Locate the end of the damage with respect to the vehicle longitudinal center line or bumper corner for end impacts or an undamaged axle for side impacts.

Specific Impact No.	Location of Direct Damage	Location of Field L
<u>01</u>	<u>BEGINS LEFT FRONT BUMPER CORNER</u>	<u>FULL FRONTAL</u>

CRUSH PROFILE IN CENTIMETERS

NOTES: Identify the plane at which the C-measurements are taken (e.g., at bumper, above bumper, at sill, above sill, etc.) and label adjustments (e.g., free space).

Measure and document on the vehicle diagram the location of maximum crush.

Measure C1 to C6 from driver to passenger side in front or rear impacts and rear to front in side impacts.

Free space value is defined as the distance between the baseline and the original body contour taken at the individual C locations. This may include the following: bumper lead, bumper taper, side protrusion, side taper, etc. Record the value for each C-measurement and maximum crush.

Use as many lines/columns as necessary to describe each damage profile.

Specific Impact Number	Plane of Impact C-Measurements	Direct Damage		Field L	C ₁	C ₂	C ₃	C ₄	C ₅	C ₆	±D

MEASUREMENTS IN CENTIMETERS

NOTES: Sketch new perimeter and cross hatch direct damage and single hatch induced damage on all views. Annotate observations which might be useful in reconstructing the accident (e.g., grass in tire bead, direction of striations, scuff on sidewalls, etc.). If pulling trailer, sketch type of trailer and damage received on the back of CRASH.

Annotate any damage caused by extrication such as component removal by torching, prying, or hydraulic shears.

STEERING COLUMN87. Steering Column Type 2

- (1) Fixed column
 (2) Tilt column
 (3) Telescoping column
 (4) Tilt and telescoping column
 (8) Other column type (specify): _____

(9) Unknown

88. Blank X X

(This variable is left blank so that numbering consistency can be maintained with the 1988-93 CDS.

89. Blank X X X

(This variable is left blank so that numbering consistency can be maintained with the 1988-93 CDS.

90. Blank X X X

(This variable is left blank so that numbering consistency can be maintained with the 1988-93 CDS.

91. Blank X X X

(This variable is left blank so that numbering consistency can be maintained with the 1988-93 CDS.

92. Steering Rim/Spoke Deformation φ φ

Code actual measured

deformation to the nearest centimeter

- (00) No steering rim deformation
 (01-14) Actual measured value in centimeters
 (15) 15 centimeters or more
 (98) Observed deformation cannot be measured
 (99) Unknown

93. Location of Steering Rim/Spoke Deformation φ φ

(00) No steering rim deformation

Quarter Sections

- (01) Section A
 (02) Section B
 (03) Section C
 (04) Section D

*Half Sections*

- (05) Upper half of rim/spoke
 (06) Lower half of rim/spoke
 (07) Left half of rim/spoke
 (08) Right half of rim/spoke

- (09) Complete steering wheel collapse
 (10) Undetermined location
 (99) Unknown

INSTRUMENT PANEL94. Odometer Reading 1 2 4,000

_____ kilometers—Code to the nearest 1,000 kilometers

- (000) No odometer
 (001) Less than 1,500 kilometers
 (500) 499,500 kilometers or more
 (999) Unknown

φ 76 2 5 9 miles X 1.6093 = 1 2 3 8 2 7 kilometers

Source: INSPECTION

95. Instrument Panel Damage from Occupant Contact? φ

- (0) No
 (1) Yes
 (9) Unknown

96. Knee Bolsters Deformed from Occupant Contact? 8

 (8) Not present
 (9) Unknown

97. Did Glove Compartment Door Open During Collision(s)? φ

- (0) No
 (1) Yes
 (8) Not present
 (9) Unknown

VEHICLE INTERIOR SKETCHES

Note area of ejection/entrapment

Sketch windshield contact(s) and the damaged area(s) on the instrument panel outline (e.g., radio, glove compartment, damage to instrument panel structure).
 Cross hatch contact points, draw spider webs or use other annotation as may be appropriate.
 Annotate the contacted area with a letter (begin with A) and list on the Points of Occupant Contact page.

POINTS OF OCCUPANT CONTACT

Contact	Interior Component Contacted	Occupant No. If Known	Body Region If Known	Supporting Physical Evidence	Confidence Level of Contact Point

CODES FOR INTERIOR COMPONENTS

FRONT

- (01) Windshield
- (02) Mirror
- (03) Sunvisor
- (04) Steering wheel rim
- (05) Steering wheel hub/spoke
- (06) Steering wheel (combination of codes 04 and 05)
- (07) Steering column, transmission selector lever, other attachment
- (08) Add on equipment (e.g., CB, tape deck, air conditioner)
- (09) Left instrument panel and below
- (10) Center instrument panel and below
- (11) Right instrument panel and below
- (12) Glove compartment door
- (13) Knee bolster
- (14) Windshield including one or more of the following: front header, A (A1/A2)-pillar, instrument panel, mirror, or steering assembly (driver side only)
- (15) Windshield including one or more of the following: front header, A (A1/A2)-pillar, instrument panel, or mirror (passenger side only)
- (16) Driver side air bag compartment cover
- (17) Passenger side air bag compartment cover
- (18) Windshield reinforced by exterior object (specify): _____
- (19) Other front object (specify): _____

LEFT SIDE

- (20) Left side interior surface, excluding hardware or armrests
- (21) Left side hardware or armrest
- (22) Left A (A1/A2)-pillar

- (23) Left B-pillar
- (24) Other left pillar (specify): _____
- (25) Left side window glass or frame
- (26) Left side window glass including one or more of the following: frame, window sill, A (A1/A2)-pillar, B-pillar, or roof side rail.
- (27) Other left side object (specify): _____
- (28) Left side window sill

RIGHT SIDE

- (30) Right side interior surface, excluding hardware or armrests
- (31) Right side hardware or armrest
- (32) Right A (A1/A2)-pillar
- (33) Right B-pillar
- (34) Other right pillar (specify): _____
- (35) Right side window glass or frame
- (36) Right side window glass including one or more of the following: frame, window sill, A (A1/A2)-pillar, B pillar, or roof side rail.
- (37) Other right side object (specify): _____
- (38) Right side window sill

INTERIOR

- (40) Seat, back support
- (41) Belt restraint webbing/buckle
- (42) Belt restraint B-pillar attachment point
- (43) Other restraint system component (specify): _____
- (44) Head restraint system
- (45) Air bag (use codes "16" and "17" for injuries sustained from air bag compartment covers)

- (46) Other occupants (specify): _____

- (47) Interior loose objects
- (48) Child safety seat (specify): _____

- (49) Other interior object (specify): _____

ROOF

- (50) Front header
- (51) Rear header
- (52) Roof left side rail
- (53) Roof right side rail
- (54) Roof or convertible top

FLOOR

- (56) Floor (including toe pan)
- (57) Floor or console mounted transmission lever, including console
- (58) Parking brake handle
- (59) Foot controls including parking brake

REAR

- (60) Backlight (rear window)
- (61) Backlight storage rack, door, etc.
- (62) Other rear object (specify): _____

CONFIDENCE LEVEL OF CONTACT POINT

- (1) Certain
- (2) Probable
- (3) Possible
- (9) Unknown

AUTOMATIC RESTRAINTS

NOTES: Encode the data for each applicable front seat position. The attribute for the variables may be found below. Restraint systems should be assessed during the vehicle inspection then coded on the Occupant Assessment Form.

AIR BAGS

		Left	Right
FIRST	Availability/Function	1	1
	Deployment	4	1
	Failure	1	1

Air Bag System Availability/Function

- (0) Not equipped/not available
(1) Air bag

Non-functional

- (2) Air bag disconnected (specify): _____

- (3) Air bag not reinstalled

- (9) Unknown

Air Bag System Deployment

- (0) Not equipped/not available

- (1) Air bag deployed during accident (as a result of impact)

- (2) Air bag deployed inadvertently just prior to accident

- (3) Air bag deployed, accident sequence undetermined

- (4) Nondeployed

- (5) Unknown if deployed

- (6) Air bag deployed as a result of a noncollision event during accident sequence (e.g., fire, explosion, electrical)

- (9) Unknown

Did Air Bag System Fail?

- (0) Not equipped/not available

- (1) No

- (2) Yes (specify): _____

- (9) Unknown

AUTOMATIC BELTS

		Left	Right

Proper Use of Automatic (Passive) Belt System

- (0) Not equipped/not available/not used
(1) Automatic belt used properly
(2) Automatic belt used properly with child safety seat

Automatic Belt Used Improperly

- (3) Automatic shoulder belt worn under arm
(4) Automatic shoulder belt worn behind back
(5) Automatic belt worn around more than one person
(6) Lap portion of automatic belt worn on abdomen
(7) Automatic lap and shoulder belt or automatic shoulder belt used improperly with child safety seat (specify): _____
(8) Other improper use of automatic belt system (specify): _____
(9) Unknown

Automatic (Passive) Belt Failure Modes During Accident

- (0) Not equipped/not available/not in use
(1) No automatic belt failure(s)
(2) Torn webbing (stretched webbing not included)
(3) Broken buckle or latchplate
(4) Upper anchorage separated
(5) Other anchorage separated (specify): _____
(6) Broken retractor
(7) Combination of above (specify): _____
(8) Other automatic belt failure (specify): _____
(9) Unknown

MANUAL RESTRAINTS

NOTES: Encode the applicable data for **each seat position** in the vehicle. The attribute for the variable may be found below. Restraint systems should be assessed during the vehicle inspection then coded on the Occupant Assessment Form.

If a Child safety seat is present, encode the data on the back of this page.

If the vehicle has automatic restraints available, encode the appropriate data on the back of the previous page.

Manual (Active) Belt System Availability

- (0) None available
- (1) Belt removed/destroyed
- (2) Shoulder belt
- (3) Lap belt
- (4) Lap and shoulder belt
- (5) Belt available - type unknown

Integral Belt Partially Destroyed

- (6) Shoulder belt (lap belt destroyed/removed)
- (7) Lap belt (shoulder belt destroyed/removed)

(8) Other belt (specify): _____

(9) Unknown

Manual (Active) Belt System Use

- (00) None used, not available, or belt removed/destroyed
- (01) Inoperable (specify): _____
- (02) Shoulder belt
- (03) Lap belt
- (04) Lap and shoulder belt
- (05) Belt used - type unknown

(08) Other belt used (specify):

- (12) Shoulder belt used with child safety seat
- (13) Lap belt used with child safety seat
- (14) Lap and shoulder belt used with child safety seat
- (15) Belt used with child safety seat - type unknown
- (18) Other belt used with child safety seat (specify): _____
- (99) Unknown if belt used

Manual (Active) Belt Failure Modes During Accident

- (0) No manual belt used or not available
- (1) No manual belt failure(s)
- (2) Torn webbing (stretched webbing not included)
- (3) Broken buckle or latchplate
- (4) Upper anchorage separated
- (5) Other anchorage separated (specify): _____
- (6) Broken retractor
- (7) Combination of above (specify): _____
- (8) Other manual belt failure (specify): _____
- (9) Unknown

CHILD SAFETY SEAT FIELD ASSESSMENT

When a child safety seat is present enter the occupant's number in the first row and complete the column below the occupant's number using the codes listed below. Complete a column for each child safety seat present.

Occupant Number						
1. Type of Child Safety Seat						
2. Child Safety Seat Orientation						
3. Child Safety Seat Harness Usage				2		
4. Child Safety Seat Shield Usage						
5. Child Safety Seat Tether Usage						
6. Child Safety Seat Make/Model	Specify Below for Each Child Safety Seat					

1. Type of Child Safety Seat

- (0) No child safety seat
- (1) Infant seat
- (2) Toddler seat
- (3) Convertible seat
- (4) Booster seat
- (7) Other type child safety seat (specify):

- (8) Unknown child safety seat type
- (9) Unknown if child safety seat used

2. Child Safety Seat Orientation

- (00) No child safety seat

Designed for Rear Facing for This Age/Weight

- (01) Rear facing
- (02) Forward facing
- (08) Other orientation (specify):

- (09) Unknown orientation

Designed for Forward Facing for This Age/Weight

- (11) Rear facing
- (12) Forward facing
- (18) Other orientation (specify):

- (19) Unknown orientation

Unknown Design or Orientation For This Age/Weight, or Unknown Age/Weight

- (21) Rear facing
- (22) Forward facing
- (28) Other orientation (specify):

- (29) Unknown orientation

- (99) Unknown if child safety seat used

3. Child Safety Seat Harness Usage

4. Child Safety Seat Shield Usage

5. Child Safety Seat Tether Usage

Note: Options Below Are Used for Variables 3-5.

- (00) No child safety seat

Not Designed with Harness/Shield/Tether

- (01) After market harness/shield/tether added, not used
- (02) After market harness/shield/tether used
- (03) Child safety seat used, but no after market harness/shield/tether added
- (09) Unknown if harness/shield/tether added or used

Designed With Harness/Shield/Tether

- (11) Harness/shield/tether not used
- (12) Harness/shield/tether used
- (19) Unknown if harness/shield/tether used

Unknown If Designed With Harness/Shield/Tether

- (21) Harness/shield/tether not used
- (22) Harness/shield/tether used
- (29) Unknown if harness/shield/tether used

- (99) Unknown if child safety seat used

6. Child Safety Seat Make/Model

(Specify make/model and occupant number)

HEAD RESTRAINTS/SEAT EVALUATION

NOTES: Encode the applicable data for each seat position in the vehicle. The attribute for these variables may be found at the bottom of the page. Head restraint type/damage and seat type/performance should be assessed during the vehicle inspection then coded on the Occupant Assessment Form.

		Left	Center	Right
FIRST	Head Restraint Type/Damage	3	φ	3
	Seat Type	φ 6	φ 6	φ 6
	Seat Performance	1	1	1
	Seat Orientation	1	1	1

	Seat Type	φ 3	φ 3	φ 3
	Seat Performance	1	1	1
	Seat Orientation	1	1	1
THIRD	Head Restraint Type/Damage			
	Seat Type			
	Seat Performance			
	Seat Orientation			
OTHER	Head Restraint Type/Damage			
	Seat Type			
	Seat Performance			
	Seat Orientation			

Head Restraint Type/Damage by Occupant at This Occupant Position

- (0) No head restraints
- (1) Integral — no damage
- (2) Integral — damaged during accident
- (3) Adjustable — no damage
- (4) Adjustable — damaged during accident
- (5) Add-on — no damage
- (6) Add-on — damaged during accident
- (8) Other Specify: _____

(9) Unknown

Seat Type (this Occupant Position)

- (00) Occupant not seated or no seat
- (01) Bucket
- (02) Bucket with folding back
- (03) Bench
- (04) Bench with separate back cushions
- (05) Bench with folding back(s)
- (06) Split bench with separate back cushions
- (07) Split bench with folding back(s)
- (08) Pedestal (i.e., column supported)
- (09) Other seat type (specify): _____

(10) Box mounted seat (i.e., van type)
 (99) Unknown

Seat Performance (this Occupant Position)

- (0) Occupant not seated or no seat
- (1) No seat performance failure(s)
- (2) Seat adjusters failed
- (3) Seat back folding locks or "seat back" failed specify: _____
- (4) Seat tracks/anchors failed
- (5) Deformed by impact of occupant
- (6) Deformed by passenger compartment intrusion (specify): _____

(7) Combination of above (specify): _____

(8) Other (specify): _____

(9) Unknown

Seat Orientation (this Occupant Position)

- (0) Occupant not seated or no seat
- (1) Forward facing seat
- (2) Rear facing seat
- (3) Side facing seat (inward)
- (4) Side facing seat (outward)
- (8) Other (specify): _____

(9) Unknown

DESCRIBE ANY INDICATION OF ABNORMAL OCCUPANT POSTURE (I.E., UNUSUAL OCCUPANT CONTACT PATTERN)

EJECTION/ENTRAPMENT DATA

Complete the following if the researcher has any indication that an occupant was either ejected from or entrapped in the vehicle. Code the appropriate data on the Occupant Assessment Form.

EJECTION No [☒] Yes []

Describe indications of ejection and body parts involved in partial ejection(s):

Occupant Number						
Ejection						
(Note on Vehicle Interior Sketch) Ejection Area						
Ejection Medium						
Medium Status						

Ejection

- (1) Complete ejection
(2) Partial ejection
(3) Ejection, Unknown degree
(9) Unknown

Ejection Area

- (1) Windshield
(2) Left front
(3) Right front
(4) Left rear
(5) Right rear
(6) Rear

(7) Roof

- (8) Other area (e.g., back of pickup, etc.) (specify):

(9) Unknown**Ejection Medium**

- (1) Door/hatch/tailgate
(2) Nonfixed roof structure
(3) Fixed glazing
(4) Nonfixed glazing (specify):

(5) Integral structure

- (8) Other medium (specify):

(9) Unknown**Medium Status (Immediately Prior to Impact)**

- (1) Open
(2) Closed
(3) Integral structure
(9) Unknown

ENTRAPMENT No [☒] Yes []

Describe entrapment mechanism: _____

Component(s): _____

(Note in vehicle interior diagram)

OCCUPANT ASSESSMENT FORM

OCCUPANT'S SEATING

1. Primary Sampling Unit Number _____
2. Case Number - Stratum DST-93-AB-007
3. Vehicle Number 01
4. Occupant Number 01

OCCUPANT'S CHARACTERISTICS

5. Occupant's Age 35
Code actual age at time of accident.
(00) Less than one year old (specify by month): _____
(97) 97 years and older _____
(99) Unknown
6. Occupant's Sex 2
(1) Male
(2) Female
(9) Unknown
7. Occupant's Height 163
Code actual height to the nearest centimeter.
(999) Unknown
64 inches X 2.54 = 163 centimeters
8. Occupant's Weight 061
Code actual weight to the nearest kilogram.
(999) Unknown
135 pounds X .4536 = 061 kilograms
9. Occupant's Role 1
(1) Driver
(2) Passenger
(9) Unknown

10. Occupant's Seat Position 11
Front Seat
(11) Left side
(12) Middle
(13) Right side
(14) Other (specify): _____
(15) On or in the lap of another occupant

Second Seat
(21) Left side
(22) Middle
(23) Right side
(24) Other (specify): _____
(25) On or in the lap of another occupant

Third Seat
(31) Left side
(32) Middle
(33) Right side
(34) Other (specify): _____
(35) On or in the lap of another occupant

Fourth Seat
(41) Left side
(42) Middle
(43) Right side
(44) Other (specify): _____
(45) On or in the lap of another occupant

(97) In or on unenclosed area
(98) Other seat (specify): _____
(99) Unknown
11. Occupant's Posture 0
(0) Normal posture

Abnormal posture
(1) Kneeling or standing on seat
(2) Lying on or across seat
(3) Kneeling, standing or sitting in front of seat
(4) Sitting sideways or turned to talk with another occupant or to look out a rear window
(5) Sitting on a console
(6) Lying back in a reclined seat position
(7) Bracing with feet or hands on a surface in front of seat
(8) Other abnormal posture (specify): _____
(9) Unknown

EJECTION/ENTRAPMENT

12. Ejection φ

- (0) No ejection
- (1) Complete ejection
- (2) Partial ejection
- (3) Ejection, unknown degree
- (9) Unknown

13. Ejection Area φ

- (0) No ejection
- (1) Windshield
- (2) Left front
- (3) Right front
- (4) Left rear
- (5) Right rear
- (6) Rear
- (7) Roof
- (8) Other area (e.g., back of pickup, etc.)
(specify): _____
- (9) Unknown

14. Ejection Medium φ

- (0) No ejection
- (1) Door/hatch/tailgate
- (2) Nonfixed roof structure
- (3) Fixed glazing
- (4) Nonfixed glazing (specify): _____
- (5) Integral structure
- (8) Other medium (specify): _____
- (9) Unknown

15. Medium Status (Immediately Prior To Impact) φ

- (0) No ejection
- (1) Open
- (2) Closed
- (3) Integral structure
- (9) Unknown

16. Entrapment φ

(NOTE: Entrapped means that part of the person was in the vehicle and mechanically restrained; jammed doors and immobilizing injuries by themselves are not sufficient to constitute entrapment.)

- (0) Not entrapped
- (1) Entrapped
- (9) Unknown

RESTRAINT SYSTEM EVALUATION

17. Manual (Active) Belt System Availability 4

- (0) None available
- (1) Belt removed/destroyed
- (2) Shoulder belt
- (3) Lap belt
- (4) Lap and shoulder belt
- (5) Belt available—type unknown

Integral Belt Partially Destroyed

- (6) Shoulder belt (lap belt destroyed/removed)
- (7) Lap belt (shoulder belt destroyed/removed)

(8) Other belt (specify): _____

(9) Unknown _____

18. Manual (Active) Belt System Use 4

- (00) None used, not available, or belt removed/destroyed
- (01) Inoperative (specify): _____

(02) Shoulder belt _____

(03) Lap belt _____

(04) Lap and shoulder belt _____

(05) Belt used—type unknown _____

(08) Other belt used (specify): _____

(12) Shoulder belt used with child safety seat _____

(13) Lap belt used with child safety seat _____

(14) Lap and shoulder belt used with child safety seat _____

(15) Belt used with child safety seat—type unknown _____

(18) Other belt used with child safety seat (specify): _____

(99) Unknown if belt used _____

19. Proper Use of Manual (Active) Belts 1

- (0) None used or not available
- (1) Belt used properly
- (2) Belt used properly with child safety seat

Belt Used Improperly

- (3) Shoulder belt worn under arm
- (4) Shoulder belt worn behind back or seat
- (5) Belt worn around more than one person
- (6) Lap belt worn on abdomen
- (7) Lap belt or lap and shoulder belt used improperly with child safety seat (specify): _____

(8) Other improper use of manual belt system (specify): _____

(9) Unknown _____

20. Manual (Active) Belt Failure Modes During Accident 1

- (0) No manual belt used
- (1) No manual belt failure(s)
- (2) Torn webbing (stretched webbing not included)
- (3) Broken buckle or latchplate
- (4) Upper anchorage separated
- (5) Other anchorage separated (specify): _____

(6) Broken retractor _____

(7) Combination of above (specify): _____

(8) Other manual belt failure (specify): _____

(9) Unknown _____

21. Air Bag System Availability/Function 1

- (0) Not equipped/not available
- (1) Air bag

Non-functional

(2) Air bag disconnected (specify): _____

(3) Air bag not reinstalled _____

(9) Unknown _____

22. Air Bag System Deployment 4

- (0) Not equipped/not available
- (1) Air bag deployed during accident (as a result of impact)
- (2) Air bag deployed inadvertently just prior to accident
- (3) Air bag deployed, accident sequence undetermined
- (4) Nondeployed
- (5) Unknown if deployed
- (6) Air bag deployed as a result of a noncollision event during accident sequence (e.g., fire, explosion, electrical)
- (9) Unknown

23. Are There Indications of Air Bag System Failure? 1

- (0) Not equipped/not available

(1) No

(2) Yes (specify): _____

(9) Unknown _____

Note: See Variables 44 through 48 (Page 5) for Information on Automatic Belts

24. Police Reported Restraint Use 4

- (0) None used
- (1) Police did not indicate restraint use
- (2) Shoulder belt
- (3) Lap belt
- (4) Lap and shoulder belt
- (5) Belt used, type not specified
- (6) Child safety seat
- (7) Other or automatic restraint (specify): _____

(8) Restrained, type unknown _____

(9) Police indicated "unknown"

HEAD RESTRAINT AND SEAT EVALUATION

25. Head Restraint Type/Damage by Occupant at This Occupant Position 3

- (0) No head restraints
- (1) Integral—no damage
- (2) Integral—damaged during accident
- (3) Adjustable—no damage
- (4) Adjustable—damaged during accident
- (5) Add-on—no damage
- (6) Add-on—damaged during accident
- (8) Other (specify): _____

(9) Unknown

26. Seat Type (this Occupant Position) 6

- (00) Occupant not seated or no seat
- (01) Bucket
- (02) Bucket with folding back
- (03) Bench
- (04) Bench with separate back cushions
- (05) Bench with folding back(s)
- (06) Split bench with separate back cushions
- (07) Split bench with folding back(s)
- (08) Pedestal (i.e., column supported)
- (09) Other seat type (specify): _____

(10) Box mounted seat (i.e., van type)

(99) Unknown

27. Seat Performance (this Occupant Position) 1

- (0) Occupant not seated or no seat
- (1) No seat performance failure(s)
- (2) Seat adjusters failed
- (3) Seat back folding locks or "seat back" failed
- (4) Seat track/anchors failed
- (5) Deformed by impact of occupant
- (6) Deformed by passenger compartment intrusion (specify): _____

(7) Combination of above (specify): _____

(8) Other (specify): _____

(9) Unknown

CHILD SAFETY SEAT

28. Child Safety Seat Make/Model φ φ φ
 (000) No child safety seat
 Applicable codes are found in your NASS CDS
 Data Collection, Coding and Editing
 (950) Built-in child safety seat
 (997) Other make/model (specify):

 (998) Unknown make/model
 (999) Unknown if child safety seat used

29. Type of Child Safety Seat φ
 (0) No child safety seat
 (1) Infant seat
 (2) Toddler seat
 (3) Convertible seat
 (4) Booster seat
 (7) Other type child safety seat (specify):

 (8) Unknown child safety seat type
 (9) Unknown if child safety seat used

30. Child Safety Seat Orientation φ φ
 (00) No child safety seat

Designed for Rear Facing for This Age/Weight
 (01) Rear facing
 (02) Forward facing
 (08) Other orientation (specify):

 (09) Unknown orientation

Designed For Forward Facing for This Age/Weight
 (11) Rear facing
 (12) Forward facing
 (18) Other orientation (specify):

 (19) Unknown orientation

Unknown Design or Orientation For This Age/Weight, or Unknown Age/Weight
 (21) Rear facing
 (22) Forward facing
 (28) Other orientation (specify):

 (29) Unknown orientation

(99) Unknown if child safety seat used

31. Child Safety Seat Harness Usage φ φ

32. Child Safety Seat Shield Usage φ φ

33. Child Safety Seat Tether Usage φ φ

Note: Options below applicable to
 Variables OA31-OA33.
 (00) No child safety seat

Not Designed With Harness/Shield/Tether

(01) After market harness/shield/tether
 added, not used
 (02) After market harness/shield/tether used
 (03) Child safety seat used, but no after market
 harness/shield/tether added
 (09) Unknown if harness/shield/tether
 added or used

Designed With Harness/Shield/Tether

(11) Harness/shield/tether not used
 (12) Harness/shield/tether used
 (19) Unknown if harness/shield/tether used

Unknown If Designed With Harness/Shield/Tether

(21) Harness/shield/tether not used
 (22) Harness/shield/tether used
 (29) Unknown if harness/shield/tether used

 (99) Unknown if child safety seat used

INJURY CONSEQUENCES34. Injury Severity (Police Rating) 2

- (0) O - No injury
- (1) C - Possible injury
- (2) B - Nonincapacitating injury
- (3) A - Incapacitating injury
- (4) K - Killed
- (5) U - Injury, severity unknown
- (6) Died prior to accident
- (9) Unknown

35. Treatment - Mortality 4

- (0) No treatment
- (1) Fatal
- (2) Fatal - ruled disease (specify):

Nonfatal

- (3) Hospitalization
- (4) Transported and released
- (5) Treatment at scene - nontransported
- (6) Treatment later
- (8) Treatment - other (specify):
- (9) Unknown

36. Type Of Medical Facility (for Initial Treatment) 2

- (0) Not treated at a medical facility
- (1) Trauma center
- (2) Hospital
- (3) Medical clinic
- (4) Physician's office
- (5) Treatment later at medical facility
- (8) Other (specify):
- (9) Unknown

37. Hospital Stay φ φ

- (00) Not Hospitalized
- Code the number of days (up through 60) that the occupant stayed in hospital.
- (61) 61 days or more
 - (99) Unknown

99. Case Occupant 1

- (0) Not the Case Occupant
- (1) This is the Case Occupant
- (2) This is the Case Occupant in another case.

38. Working Days Lost 6 1

- Code the number of days (up through 60) that the occupant lost from work due to the accident
- (00) No working days lost
 - (61) 61 days or more
 - (62) Fatally injured
 - (97) Not working prior to accident
 - (99) Unknown

STOP - GO TO VARIABLE 44 ON PAGE 7**VARIABLES 39 THROUGH 43 ARE COMPLETED BY THE ZONE CENTER**39. Time to Death φ φ

- Code number of hours from time of accident to time of death up through 24 hours. If time of death is greater than 24 hours, code number of days. (Note: 1 day = 31, 2 days = 32, ... n days = 30 + n up through 30 days = 60)
- (00) Not fatal
 - (96) Fatal - ruled disease
 - (99) Unknown

40. 1st Medically Reported Cause of Death φ φ41. 2nd Medically Reported Cause of Death φ φ42. 3rd Medically Reported Cause of Death φ φ

- Code the Occupant Injury from line number(s) for the medically reported injury(s) which reportedly contributed to this occupant's death
- (00) Not fatal or no additional causes
 - (96) Mode of death given but specific injuries are not linked to cause of death. (specify):

- (97) Other result (includes fatal ruled disease) (specify):

- (99) Unknown

43. Number of Recorded Injuries for This Occupant φ 6

- Code the actual number of injuries recorded for this occupant.
- (00) No recorded injuries
 - (97) Injured, details unknown
 - (99) Unknown if injured

AUTOMATIC BELT SYSTEM44. Automatic (Passive) Belt System Availability/ Function φ

- (0) Not equipped/not available
- (1) 2 point automatic belts
- (2) 3 point automatic belts
- (3) Automatic belts - type unknown

Non-functional

- (4) Automatic belts destroyed or rendered inoperative
- (9) Unknown

45. Automatic (Passive) Belt System Use φ

- (0) Not equipped/not available/destroyed or rendered inoperative
- (1) Automatic belt in use
- (2) Automatic belt not in use (manually disconnected, motorized track inoperative) (specify): _____

- (3) Automatic belt use unknown
- (9) Unknown

46. Automatic (Passive) Belt System Type φ

- (0) Not equipped/not available
- (1) Non-motorized system
- (2) Motorized system
- (9) Unknown

47. Proper Use of Automatic (Passive) Belt System φ

- (0) Not equipped/not available/not used
- (1) Automatic belt used properly
- (2) Automatic belt used properly with child safety seat

Automatic Belt Used Improperly

- (3) Automatic shoulder belt worn under arm
- (4) Automatic shoulder belt worn behind back
- (5) Automatic belt worn around more than one person
- (6) Lap portion of automatic belt worn on abdomen
- (7) Automatic lap and shoulder belt or automatic shoulder belt used improperly with child safety seat (specify): _____

- (8) Other improper use of automatic belt system (specify): _____
- (9) Unknown

48. Automatic (Passive) Belt Failure Modes During Accident φ

- (0) Not equipped/not available/not in use
- (1) No automatic belt failure(s)
- (2) Torn webbing (stretched webbing not included)
- (3) Broken buckle or latchplate
- (4) Upper anchorage separated
- (5) Other anchorage separated (specify): _____

- (6) Broken retractor
- (7) Combination of above (specify): _____
- (8) Other automatic belt failure (specify): _____

- (9) Unknown

49. Seat Orientation (this Occupant Position) 1

- (0) Occupant not seated or no seat
- (1) Forward facing seat
- (2) Rear facing seat
- (3) Side facing seat (inward)
- (4) Side facing seat (outward)
- (8) Other (specify): _____

- (9) Unknown

STOP - VARIABLES 50 THROUGH 52 ARE COMPLETED BY THE ZONE CENTER

TRAUMA DATA50. Glasgow Coma Scale (GCS) Score (at Medical Facility) φ 2

- (00) Not injured
- (01) Injured - not treated at medical facility
- (02) No GCS Score at medical facility
- (03-15) Code the actual value of the initial GCS Score recorded at medical facility.
- (97) Injured, details unknown
- (99) Unknown if injured

51. Was the Occupant Given Blood? 1

- (1) No - blood not given
- (2) Yes - blood given (specify units): _____
- (9) Unknown if blood given

52. Arterial Blood Gases (ABG) - HCO₃ φ 1

- (00) Not injured
- (01) Injured, ABGs not measured or reported
- (02-50) Code the actual value of the HCO₃
- (96) ABGs reported, HCO₃ unknown
- (97) Injured, details unknown
- (99) Unknown if injured

OCCUPANT INJURY FORM

Form Approved
O.M.B. No. 2127-0021
NATIONAL ACCIDENT SAMPLING SYSTEM
CRASHWORTHINESS DATA SYSTEM

1. Primary Sampling Unit Number _____

3. Vehicle Number Φ 1

2. Case Number - Stratum DSI-93-AB-ΦΦ7

4. Occupant Number Φ 1

INJURY DATA

Record below the actual injuries sustained by this occupant that were identified from the official and unofficial data sources. Remember not to double count an injury just because it was identified from two different sources. If greater than ten injuries have been documented, encode the balance on the Occupant Injury Supplement.

OFFICIAL INJURY DATA — SOFT TISSUE INJURIES

Indicate the Location, Specific Anatomic Structure, Detail (size, depth, fracture type, head injury clinical signs and neurological deficits), and Source of all injuries indicated by official sources (or from PAR or other unofficial sources if medical records and interviewee data are unavailable.)

SOURCE OF INJURY DATA

OFFICIAL

- (1) Autopsy records with or without hospital/medical records
- (2) Hospital/medical records other than emergency room (e.g., discharge summary)
- (3) Emergency room records only (including associated X-rays or other lab reports)
- (4) Private physician, walk-in or emergency clinic

UNOFFICIAL

- (5) Lay coroner report
- (6) E.M.S. personnel
- (7) Interviewee
- (8) Other source (specify): _____

- (9) Police

INJURY SOURCE

FRONT

- (01) Windshield
- (02) Mirror
- (03) Sunvisor
- (04) Steering wheel rim
- (05) Steering wheel hub/spoke
- (06) Steering wheel (combination of codes 04 and 05)
- (07) Steering column, transmission selector lever, other attachment
- (08) Add on equipment (e.g., CB, tape deck, air conditioner)
- (09) Left instrument panel and below
- (10) Center instrument panel and below
- (11) Right instrument panel and below
- (12) Glove compartment door
- (13) Knee bolster
- (14) Windshield including one or more of the following: front header, A (A1/A2)-pillar, instrument panel, mirror, or steering assembly (driver side only)
- (15) Windshield including one or more of the following: front header, A (A1/A2)-pillar, instrument panel, or mirror (passenger side only)
- (16) Driver side air bag compartment cover
- (17) Passenger side air bag compartment cover
- (18) Windshield reinforced by exterior object (specify): _____
- (19) Other front object (specify): _____

LEFT SIDE

- (20) Left side interior surface, excluding hardware or armrests
- (21) Left side hardware or armrest
- (22) Left A (A1/A2)-pillar
- (23) Left B-pillar
- (24) Other left pillar (specify): _____

- (25) Left side window glass or frame
- (26) Left side window glass including one or more of the following: frame, window sill, A (A1/A2)-pillar, B-pillar, or roof side rail.
- (27) Other left side object (specify): _____

- (28) Left side window sill

RIGHT SIDE

- (30) Right side interior surface, excluding hardware or armrests
- (31) Right side hardware or armrest
- (32) Right A (A1/A2)-pillar
- (33) Right B-pillar
- (34) Other right pillar (specify): _____
- (35) Right side window glass or frame
- (36) Right side window glass including one or more of the following: frame, window sill, A (A1/A2)-pillar, B-pillar, or roof side rail.
- (37) Other right side object (specify): _____

- (38) Right side window sill

INTERIOR

- (40) Seat, back support
- (41) Belt restraint webbing/buckle
- (42) Belt restraint B-pillar or door frame attachment point
- (43) Other restraint system component (specify): _____
- (44) Head restraint system
- (45) Air bag (use codes "16" and "17" for injuries sustained from air bag compartment covers)
- (46) Other occupants (specify): _____
- (47) Interior loose objects
- (48) Child safety seat (specify): _____
- (49) Other interior object (specify): _____

ROOF

- (50) Front header
- (51) Rear header
- (52) Roof left side rail
- (53) Roof right side rail
- (54) Roof or convertible top

FLOOR

- (56) Floor (including toe pan)
- (57) Floor or console mounted transmission lever, including console
- (58) Parking brake handle
- (59) Foot controls including parking brake

REAR

- (60) Backlight (rear window)

- (61) Backlight storage rack, door, etc.
- (62) Other rear object (specify): _____

EXTERIOR of OCCUPANT'S VEHICLE

- (65) Hood
- (66) Outside hardware (e.g., outside mirror, antenna)
- (67) Other exterior surface or tires (specify): _____
- (68) Unknown exterior objects

EXTERIOR of OTHER MOTOR VEHICLE

- (70) Front bumper
- (71) Hood edge
- (72) Other front of vehicle (specify): _____
- (73) Hood
- (74) Hood ornament
- (75) Windshield, roof rail, A-pillar
- (76) Side surface
- (77) Side mirrors
- (78) Other side protrusions (specify): _____

- (79) Rear surface
- (80) Undercarriage
- (81) Tires and wheels
- (82) Other exterior of other motor vehicle (specify): _____
- (83) Unknown exterior of other motor vehicle

OTHER VEHICLE or OBJECT IN THE ENVIRONMENT

- (84) Ground
- (85) Other vehicle or object (specify): _____
- (86) Unknown vehicle or object

NONCONTACT INJURY

- (90) Fire in vehicle
- (91) Flying glass
- (92) Other noncontact injury source (specify): INERTIAL FORCE
- (93) Air bag exhaust gases
- (97) Injured, unknown source

INJURY SOURCE CONFIDENCE LEVEL

- (1) Certain
- (2) Probable
- (3) Possible
- (9) Unknown

DIRECT/INDIRECT INJURY

- (1) Direct contact injury
- (2) Indirect contact injury
- (3) Noncontact injury
- (7) Injured, unknown source

OCCUPANT INJURY CLASSIFICATION

Body Region

- (1) Head
- (2) Face
- (3) Neck
- (4) Thorax
- (5) Abdomen
- (6) Spine
- (7) Upper Extremity
- (8) Lower Extremity
- (9) Unspecified

Type of Anatomic Structure

- (1) Whole Area
- (2) Vessels
- (3) Nerves
- (4) Organs (includes muscles/ligaments)
- (5) Skeletal (includes joints)
- (6) Head - LOC
- (9) Skin

Specific Anatomic Structure

Whole Area

- (02) Skin - Abrasion
- (04) Skin - Contusion
- (06) Skin - Laceration
- (08) Skin - Avulsion
- (10) Amputation
- (20) Burn
- (30) Crush
- (40) Degloving
- (50) Injury - NFS
- (90) Trauma, other than mechanical

Head - LOC

- (02) Length of LOC
- (04, 06, 08) Level of Consciousness
- (10) Concussion

Spine

- (02) Cervical
- (04) Thoracic
- (06) Lumbar

Vessels, Nerves, Organs, Bones, Joints are assigned consecutive two digit numbers beginning with 02

Level of Injury

Specific injuries are assigned consecutive two-digit numbers beginning with 02.

To the extent possible, within the organizational framework of the AIS, 00 is assigned to an injury NFS as to severity or where only one injury is given in the dictionary for that anatomic structure. 99 is assigned to any injury NFS as to lesion or severity.

Abbreviated Injury Scale

- (1) Minor injury
- (2) Moderate injury
- (3) Serious injury
- (4) Severe injury
- (5) Critical injury
- (6) Maximum (untreatable)
- (7) Injured, unknown severity

Aspect

- (1) Right
- (2) Left
- (3) Bilateral
- (4) Central
- (5) Anterior
- (6) Posterior
- (7) Superior
- (8) Inferior
- (9) Unknown
- (0) Whole region

Indicate the Location, Specific Anatomic Structure, Detail (size, depth, fracture type, head injury clinical signs and neurological deficits), and Source of all injuries indicated by official sources (or from PAR or other unofficial sources if medical records and interviewee data are unavailable.)

OFFICIAL INJURY DATA —INTERNAL INJURIES

Indicate the Location, Specific Anatomic Structure, Detail (size, depth, fracture type, head injury clinical signs and neurological deficits), and Source of all injuries indicated by official sources (or from PAR or other unofficial sources if medical records and interviewee data are unavailable.)

OCCUPANT ASSESSMENT FORM

1. Primary Sampling Unit Number

2. Case Number - Stratum DSI-93-AB-007

3. Vehicle Number 01

4. Occupant Number 02

OCCUPANT'S CHARACTERISTICS

5. Occupant's Age 11
Code actual age at time of accident.
(00) Less than one year old (specify by month):

(97) 97 years and older

(99) Unknown

6. Occupant's Sex 1

(1) Male

(2) Female

(9) Unknown

7. Occupant's Height 147
Code actual height to the nearest
centimeter.

(999) Unknown

58 inches X 2.54 = 147 centimeters

8. Occupant's Weight 039
Code actual weight to the nearest
kilogram.

(999) Unknown

086 pounds X .4536 = 039 kilograms

9. Occupant's Role 2

(1) Driver

(2) Passenger

(9) Unknown

OCCUPANT'S SEATING

10. Occupant's Seat Position 13
Front Seat

(11) Left side

(12) Middle

(13) Right side

(14) Other (specify):

(15) On or in the lap of another occupant

Second Seat

(21) Left side

(22) Middle

(23) Right side

(24) Other (specify):

(25) On or in the lap of another occupant

Third Seat

(31) Left side

(32) Middle

(33) Right side

(34) Other (specify):

(35) On or in the lap of another occupant

Fourth Seat

(41) Left side

(42) Middle

(43) Right side

(44) Other (specify):

(45) On or in the lap of another occupant

(97) In or on unenclosed area

(98) Other seat (specify):

(99) Unknown

11. Occupant's Posture 0
(0) Normal posture

Abnormal posture

(1) Kneeling or standing on seat

(2) Lying on or across seat

(3) Kneeling, standing or sitting in front of seat

(4) Sitting sideways or turned to talk with another occupant or to look out a rear window

(5) Sitting on a console

(6) Lying back in a reclined seat position

(7) Bracing with feet or hands on a surface in front of seat

(8) Other abnormal posture (specify):

(9) Unknown

EJECTION/ENTRAPMENT

12. Ejection φ

- (0) No ejection
- (1) Complete ejection
- (2) Partial ejection
- (3) Ejection, unknown degree
- (9) Unknown

13. Ejection Area φ

- (0) No ejection
- (1) Windshield
- (2) Left front
- (3) Right front
- (4) Left rear
- (5) Right rear
- (6) Rear
- (7) Roof
- (8) Other area (e.g., back of pickup, etc.)
(specify): _____
- (9) Unknown

14. Ejection Medium φ

- (0) No ejection
- (1) Door/hatch/tailgate
- (2) Nonfixed roof structure
- (3) Fixed glazing
- (4) Nonfixed glazing (specify): _____
- (5) Integral structure
- (8) Other medium (specify): _____
- (9) Unknown

15. Medium Status (Immediately Prior To Impact) φ

- (0) No ejection
- (1) Open
- (2) Closed
- (3) Integral structure
- (9) Unknown

16. Entrapment φ

(NOTE: Entrapped means that part of the person was in the vehicle and mechanically restrained; jammed doors and immobilizing injuries by themselves are not sufficient to constitute entrapment.)

- (0) Not entrapped
- (1) Entrapped
- (9) Unknown

RESTRAINT SYSTEM EVALUATION

17. Manual (Active) Belt System Availability 4

- (0) None available
- (1) Belt removed/destroyed
- (2) Shoulder belt
- (3) Lap belt
- (4) Lap and shoulder belt
- (5) Belt available—type unknown

Integral Belt Partially Destroyed

- (6) Shoulder belt (lap belt destroyed/removed)
- (7) Lap belt (shoulder belt destroyed/removed)

(8) Other belt (specify): _____

(9) Unknown _____

18. Manual (Active) Belt System Use φ 4

- (00) None used, not available, or belt removed/destroyed
- (01) Inoperative (specify): _____

(02) Shoulder belt _____

(03) Lap belt _____

(04) Lap and shoulder belt _____

(05) Belt used—type unknown _____

(08) Other belt used (specify): _____

(12) Shoulder belt used with child safety seat _____

(13) Lap belt used with child safety seat _____

(14) Lap and shoulder belt used with child safety seat _____

(15) Belt used with child safety seat—type unknown _____

(18) Other belt used with child safety seat (specify): _____

(99) Unknown if belt used _____

19. Proper Use of Manual (Active) Belts 1

- (0) None used or not available
- (1) Belt used properly
- (2) Belt used properly with child safety seat

Belt Used Improperly

- (3) Shoulder belt worn under arm
- (4) Shoulder belt worn behind back or seat
- (5) Belt worn around more than one person
- (6) Lap belt worn on abdomen
- (7) Lap belt or lap and shoulder belt used improperly with child safety seat (specify): _____

(8) Other improper use of manual belt system (specify): _____

(9) Unknown _____

20. Manual (Active) Belt Failure Modes During Accident 1

- (0) No manual belt used
- (1) No manual belt failure(s)
- (2) Torn webbing (stretched webbing not included)
- (3) Broken buckle or latchplate
- (4) Upper anchorage separated
- (5) Other anchorage separated (specify): _____

(6) Broken retractor _____

(7) Combination of above (specify): _____

(8) Other manual belt failure (specify): _____

(9) Unknown _____

21. Air Bag System Availability/Function 1

- (0) Not equipped/not available
- (1) Air bag

Non-functional

(2) Air bag disconnected (specify): _____

(3) Air bag not reinstalled _____

(9) Unknown _____

22. Air Bag System Deployment 1

- (0) Not equipped/not available
- (1) Air bag deployed during accident (as a result of impact)
- (2) Air bag deployed inadvertently just prior to accident
- (3) Air bag deployed, accident sequence undetermined
- (4) Nondeployed
- (5) Unknown if deployed
- (6) Air bag deployed as a result of a noncollision event during accident sequence (e.g., fire, explosion, electrical)
- (9) Unknown

23. Are There Indications of Air Bag System Failure? 1

- (0) Not equipped/not available
- (1) No
- (2) Yes (specify): _____

(9) Unknown _____

Note: See Variables 44 through 48 (Page 5) for Information on Automatic Belts

24. Police Reported Restraint Use 4

- (0) None used
- (1) Police did not indicate restraint use
- (2) Shoulder belt
- (3) Lap belt
- (4) Lap and shoulder belt
- (5) Belt used, type not specified
- (6) Child safety seat
- (7) Other or automatic restraint (specify): _____

(8) Restrained, type unknown _____

(9) Police indicated "unknown" _____

HEAD RESTRAINT AND SEAT EVALUATION

25. Head Restraint Type/Damage by Occupant at This Occupant Position 3

- (0) No head restraints
- (1) Integral—no damage
- (2) Integral—damaged during accident
- (3) Adjustable—no damage
- (4) Adjustable—damaged during accident
- (5) Add-on—no damage
- (6) Add-on—damaged during accident
- (8) Other (specify):

(9) Unknown

26. Seat Type (this Occupant Position) 6

- (00) Occupant not seated or no seat
- (01) Bucket
- (02) Bucket with folding back
- (03) Bench
- (04) Bench with separate back cushions
- (05) Bench with folding back(s)
- (06) Split bench with separate back cushions
- (07) Split bench with folding back(s)
- (08) Pedestal (i.e., column supported)
- (09) Other seat type (specify):

(10) Box mounted seat (i.e., van type)

(99) Unknown

27. Seat Performance (this Occupant Position) 1

- (0) Occupant not seated or no seat
- (1) No seat performance failure(s)
- (2) Seat adjusters failed
- (3) Seat back folding locks or "seat back" failed
- (4) Seat track/anchors failed
- (5) Deformed by impact of occupant
- (6) Deformed by passenger compartment intrusion (specify):

(7) Combination of above (specify):

(8) Other (specify):

(9) Unknown

CHILD SAFETY SEAT

28. Child Safety Seat Make/Model φ φ φ
 (000) No child safety seat
 Applicable codes are found in your NASS CDS
 Data Collection, Coding and Editing
 (950) Built-in child safety seat
 (997) Other make/model (specify):

(998) Unknown make/model
 (999) Unknown if child safety seat used

29. Type of Child Safety Seat φ
 (0) No child safety seat
 (1) Infant seat
 (2) Toddler seat
 (3) Convertible seat
 (4) Booster seat
 (7) Other type child safety seat (specify):

 (8) Unknown child safety seat type
 (9) Unknown if child safety seat used

30. Child Safety Seat Orientation φ φ
 (00) No child safety seat

Designed for Rear Facing for This Age/Weight
 (01) Rear facing
 (02) Forward facing
 (08) Other orientation (specify):

 (09) Unknown orientation

Designed For Forward Facing for This Age/Weight
 (11) Rear facing
 (12) Forward facing
 (18) Other orientation (specify):

(19) Unknown orientation

*Unknown Design or Orientation For This
 Age/Weight, or Unknown Age/Weight*
 (21) Rear facing
 (22) Forward facing
 (28) Other orientation (specify):

(29) Unknown orientation

(99) Unknown if child safety seat used

31. Child Safety Seat Harness Usage φ φ

32. Child Safety Seat Shield Usage φ φ

33. Child Safety Seat Tether Usage φ φ

Note: Options below applicable to
 Variables OA31-OA33.
 (00) No child safety seat

Not Designed With Harness/Shield/Tether

(01) After market harness/shield/tether
 added, not used
 (02) After market harness/shield/tether used
 (03) Child safety seat used, but no after market
 harness/shield/tether added
 (09) Unknown if harness/shield/tether
 added or used

Designed With Harness/Shield/Tether

(11) Harness/shield/tether not used
 (12) Harness/shield/tether used
 (19) Unknown if harness/shield/tether used

Unknown If Designed With Harness/Shield/Tether

(21) Harness/shield/tether not used
 (22) Harness/shield/tether used
 (29) Unknown if harness/shield/tether used

(99) Unknown if child safety seat used

INJURY CONSEQUENCES34. Injury Severity (Police Rating) 1

- (0) O - No injury
- (1) C - Possible injury
- (2) B - Nonincapacitating injury
- (3) A - Incapacitating injury
- (4) K - Killed
- (5) U - Injury, severity unknown
- (6) Died prior to accident
- (9) Unknown

35. Treatment - Mortality 4

- (0) No treatment
- (1) Fatal
- (2) Fatal - ruled disease (specify):

Nonfatal

- (3) Hospitalization
- (4) Transported and released
- (5) Treatment at scene - nontransported
- (6) Treatment later
- (8) Treatment - other (specify):
- (9) Unknown

36. Type Of Medical Facility (for Initial Treatment) 2

- (0) Not treated at a medical facility
- (1) Trauma center
- (2) Hospital
- (3) Medical clinic
- (4) Physician's office
- (5) Treatment later at medical facility
- (8) Other (specify):
- (9) Unknown

37. Hospital Stay φ φ

- (00) Not Hospitalized
- Code the number of days (up through 60) that the occupant stayed in hospital.
- (61) 61 days or more
- (99) Unknown

99. Case Occupant φ

- (0) Not the Case Occupant
- (1) This is the Case Occupant
- (2) This is the Case Occupant in another case.

38. Working Days Lost 9 1

- Code the number of days (up through 60) that the occupant lost from work due to the accident
- (00) No working days lost
- (61) 61 days or more
- (62) Fatally injured
- (97) Not working prior to accident
- (99) Unknown

STOP - GO TO VARIABLE 44 ON PAGE 7**VARIABLES 39 THROUGH 43 ARE COMPLETED BY THE ZONE CENTER**39. Time to Death φ φ

- Code number of hours from time of accident to time of death up through 24 hours. If time of death is greater than 24 hours, code number of days. (Note: 1 day = 31, 2 days = 32, ... n days = 30 + n up through 30 days = 60)
- (00) Not fatal
- (96) Fatal - ruled disease
- (99) Unknown

40. 1st Medically Reported Cause of Death φ φ41. 2nd Medically Reported Cause of Death φ φ42. 3rd Medically Reported Cause of Death φ φ

- Code the Occupant Injury from line number(s) for the medically reported injury(s) which reportedly contributed to this occupant's death
- (00) Not fatal or no additional causes
- (96) Mode of death given but specific injuries are not linked to cause of death. (specify):

(97) Other result (includes fatal ruled disease) (specify):

(99) Unknown

43. Number of Recorded Injuries for This Occupant φ 3

- Code the actual number of injuries recorded for this occupant.
- (00) No recorded injuries
- (97) Injured, details unknown
- (99) Unknown if injured

AUTOMATIC BELT SYSTEM

44. Automatic (Passive) Belt System Availability/Function ϕ
- (0) Not equipped/not available
 - (1) 2 point automatic belts
 - (2) 3 point automatic belts
 - (3) Automatic belts - type unknown

Non-functional

- (4) Automatic belts destroyed or rendered inoperative
- (9) Unknown

45. Automatic (Passive) Belt System Use ϕ
- (0) Not equipped/not available/destroyed or rendered inoperative
 - (1) Automatic belt in use
 - (2) Automatic belt not in use (manually disconnected, motorized track inoperative) (specify): _____
 - (3) Automatic belt use unknown
 - (9) Unknown

46. Automatic (Passive) Belt System Type ϕ
- (0) Not equipped/not available
 - (1) Non-motorized system
 - (2) Motorized system
 - (9) Unknown

47. Proper Use of Automatic (Passive) Belt System ϕ
- (0) Not equipped/not available/not used
 - (1) Automatic belt used properly
 - (2) Automatic belt used properly with child safety seat
- Automatic Belt Used Improperly*
- (3) Automatic shoulder belt worn under arm
 - (4) Automatic shoulder belt worn behind back
 - (5) Automatic belt worn around more than one person
 - (6) Lap portion of automatic belt worn on abdomen
 - (7) Automatic lap and shoulder belt or automatic shoulder belt used improperly with child safety seat (specify): _____
 - (8) Other improper use of automatic belt system (specify): _____
 - (9) Unknown

48. Automatic (Passive) Belt Failure Modes During Accident ϕ
- (0) Not equipped/not available/not in use
 - (1) No automatic belt failure(s)
 - (2) Torn webbing (stretched webbing not included)
 - (3) Broken buckle or latchplate
 - (4) Upper anchorage separated
 - (5) Other anchorage separated (specify): _____
 - (6) Broken retractor
 - (7) Combination of above (specify): _____
 - (8) Other automatic belt failure (specify): _____
 - (9) Unknown

49. Seat Orientation (this Occupant Position) 1
- (0) Occupant not seated or no seat
 - (1) Forward facing seat
 - (2) Rear facing seat
 - (3) Side facing seat (inward)
 - (4) Side facing seat (outward)
 - (8) Other (specify): _____
 - (9) Unknown

STOP - VARIABLES 50 THROUGH 52 ARE COMPLETED BY THE ZONE CENTER

TRAUMA DATA

50. Glasgow Coma Scale (GCS) Score ϕ 2
(at Medical Facility)
- (00) Not injured
 - (01) Injured - not treated at medical facility
 - (02) No GCS Score at medical facility
 - (03-15) Code the actual value of the initial GCS Score recorded at medical facility.
 - (97) Injured, details unknown
 - (99) Unknown if injured
51. Was the Occupant Given Blood? 1
- (1) No - blood not given
 - (2) Yes - blood given (specify units): _____
 - (9) Unknown if blood given
52. Arterial Blood Gases (ABG) - HCO₃ ϕ 1
- (00) Not injured
 - (01) Injured, ABGs not measured or reported
 - (02-50) Code the actual value of the HCO₃
 - (96) ABGs reported, HCO₃ unknown
 - (97) Injured, details unknown
 - (99) Unknown if injured

O.M.B. No. 2127-0021
NATIONAL ACCIDENT SAMPLING SYSTEM
CRASHWORTHINESS DATA SYSTEM

1. Primary Sampling Unit Number	3. Vehicle Number
2. Case Number - Stratum	4. Occupant Number
DSI-93-AB-007	01 02

INJURY DATA

Record below the actual injuries sustained by this occupant that were identified from the official and unofficial data sources. Remember not to double count an injury just because it was identified from two different sources. If greater than ten injuries have been documented, encode the balance on the Occupant Injury Supplement.

	Source of Injury Data	O.I.C.-A.I.S.						Injury Source	Injury Source Confidence Level	Direct/ Indirect Injury	Occupant Area Intrusion Number	ICD-9

HS Form 433B (1/93)

This report is authorized by P.L. 89-563, Title 1, Section 106, 108, and 112. While you are not required to respond, your cooperation is needed to make the results of this data collection effort comprehensive, accurate, and timely.

OFFICIAL INJURY DATA — SOFT TISSUE INJURIES

Indicate the Location, Specific Anatomic Structure, Detail (size, depth, fracture type, head injury clinical signs and neurological deficits), and Source of all injuries indicated by official sources (or from PAR or other unofficial sources if medical records and interviewee data are unavailable.)

SOURCE OF INJURY DATA

OFFICIAL

- (1) Autopsy records with or without hospital/medical records
- (2) Hospital/medical records other than emergency room (e.g., discharge summary)
- (3) Emergency room records only (including associated X-rays or other lab reports)
- (4) Private physician, walk-in or emergency clinic

UNOFFICIAL

- (5) Lay coroner report
- (6) E.M.S. personnel
- (7) Interviewee
- (8) Other source (specify): _____

- (9) Police

INJURY SOURCE

FRONT

- (01) Windshield
- (02) Mirror
- (03) Sunvisor
- (04) Steering wheel rim
- (05) Steering wheel hub/spoke
- (06) Steering wheel (combination of codes 04 and 05)
- (07) Steering column, transmission selector lever, other attachment
- (08) Add on equipment (e.g., CB, tape deck, air conditioner)
- (09) Left instrument panel and below
- (10) Center instrument panel and below
- (11) Right instrument panel and below
- (12) Glove compartment door
- (13) Knee bolster
- (14) Windshield including one or more of the following: front header, A (A1/A2)-pillar, instrument panel, mirror, or steering assembly (driver side only)
- (15) Windshield including one or more of the following: front header, A (A1/A2)-pillar, instrument panel, or mirror (passenger side only)
- (16) Driver side air bag compartment cover
- (17) Passenger side air bag compartment cover
- (18) Windshield reinforced by exterior object (specify): _____
- (19) Other front object (specify): _____

LEFT SIDE

- (20) Left side interior surface, excluding hardware or armrests
- (21) Left side hardware or armrest
- (22) Left A (A1/A2)-pillar
- (23) Left B-pillar
- (24) Other left pillar (specify): _____

- (25) Left side window glass or frame
- (26) Left side window glass including one or more of the following: frame, window sill, A (A1/A2)-pillar, B-pillar, or roof side rail.
- (27) Other left side object (specify): _____

- (28) Left side window sill

RIGHT SIDE

- (30) Right side interior surface, excluding hardware or armrests
- (31) Right side hardware or armrest
- (32) Right A (A1/A2)-pillar
- (33) Right B-pillar
- (34) Other right pillar (specify): _____
- (35) Right side window glass or frame
- (36) Right side window glass including one or more of the following: frame, window sill, A (A1/A2)-pillar, B-pillar, or roof side rail.
- (37) Other right side object (specify): _____

- (38) Right side window sill

INTERIOR

- (40) Seat, back support
- (41) Belt restraint webbing/buckle
- (42) Belt restraint B-pillar or door frame attachment point
- (43) Other restraint system component (specify): _____
- (44) Head restraint system
- (45) Air bag (use codes "16" and "17" for injuries sustained from air bag compartment covers)
- (46) Other occupants (specify): _____
- (47) Interior loose objects
- (48) Child safety seat (specify): _____
- (49) Other interior object (specify): _____

ROOF

- (50) Front header
- (51) Rear header
- (52) Roof left side rail
- (53) Roof right side rail
- (54) Roof or convertible top

FLOOR

- (56) Floor (including toe pan)
- (57) Floor or console mounted transmission lever, including console
- (58) Parking brake handle
- (59) Foot controls including parking brake

REAR

- (60) Backlight (rear window)

- (61) Backlight storage rack, door, etc.
- (62) Other rear object (specify): _____

EXTERIOR of OCCUPANT'S VEHICLE

- (65) Hood
- (66) Outside hardware (e.g., outside mirror, antenna)
- (67) Other exterior surface or tires (specify): _____
- (68) Unknown exterior objects

EXTERIOR OF OTHER MOTOR VEHICLE

- (70) Front bumper
- (71) Hood edge
- (72) Other front of vehicle (specify): _____

- (73) Hood
- (74) Hood ornament
- (75) Windshield, roof rail, A-pillar
- (76) Side surface
- (77) Side mirrors
- (78) Other side protrusions (specify): _____

- (79) Rear surface
- (80) Undercarriage
- (81) Tires and wheels
- (82) Other exterior of other motor vehicle (specify): _____
- (83) Unknown exterior of other motor vehicle

OTHER VEHICLE OR OBJECT IN THE ENVIRONMENT

- (84) Ground
- (85) Other vehicle or object (specify): _____
- (86) Unknown vehicle or object

NONCONTACT INJURY

- (90) Fire in vehicle
- (91) Flying glass
- (92) Other noncontact injury source (specify): INERTIAL FORCE
- (93) Air bag exhaust gases
- (97) Injured, unknown source

INJURY SOURCE CONFIDENCE LEVEL

- (1) Certain
- (2) Probable
- (3) Possible
- (9) Unknown

DIRECT/INDIRECT INJURY

- (1) Direct contact injury
- (2) Indirect contact injury
- (3) Noncontact injury
- (7) Injured, unknown source

OCCUPANT INJURY CLASSIFICATION

Body Region

- (1) Head
- (2) Face
- (3) Neck
- (4) Thorax
- (5) Abdomen
- (6) Spine
- (7) Upper Extremity
- (8) Lower Extremity
- (9) Unspecified

Type of Anatomic Structure

- (1) Whole Area
- (2) Vessels
- (3) Nerves
- (4) Organs (includes muscles/ligaments)
- (5) Skeletal (includes joints)
- (6) Head - LOC
- (9) Skin

Specific Anatomic Structure

Whole Area

- (02) Skin - Abrasion
- (04) Skin - Contusion
- (06) Skin - Laceration
- (08) Skin - Avulsion
- (10) Amputation
- (20) Burn
- (30) Crush
- (40) Degloving
- (50) Injury - NFS
- (90) Trauma, other than mechanical

Head - LOC

- (02) Length of LOC
- (04, 06, 08) Level of Consciousness
- (10) Concussion

Spine

- (02) Cervical
- (04) Thoracic
- (06) Lumbar

Vessels, Nerves, Organs, Bones, Joints are assigned consecutive two digit numbers beginning with 02

Level of Injury

Specific injuries are assigned consecutive two-digit numbers beginning with 02.

To the extent possible, within the organizational framework of the AIS, 00 is assigned to an injury NFS as to severity or where only one injury is given in the dictionary for that anatomic structure. 99 is assigned to any injury NFS as to lesion or severity.

Abbreviated Injury Scale

- (1) Minor injury
- (2) Moderate injury
- (3) Serious injury
- (4) Severe injury
- (5) Critical injury
- (6) Maximum (untreatable)
- (7) Injured, unknown severity

Aspect

- (1) Right
- (2) Left
- (3) Bilateral
- (4) Central
- (5) Anterior
- (6) Posterior
- (7) Superior
- (8) Inferior
- (9) Unknown
- (0) Whole region

OFFICIAL INJURY DATA —INTERNAL INJURIES

Indicate the Location, Specific Anatomic Structure, Detail (size, depth, fracture type, head injury clinical signs and neurological deficits), and Source of all injuries indicated by official sources (or from PAR or other unofficial sources if medical records and interviewee data are unavailable.)

GENERAL VEHICLE FORM

1. Primary Sampling Unit Number
2. Case Number - Stratum DSI-93-AB-007
3. Vehicle Number 02

VEHICLE IDENTIFICATION

4. Vehicle Model Year 79
Code the last two digits of the model year
(99) Unknown
5. Vehicle Make (specify): 12
FORD
Applicable codes are found in your
NASS Data Collection, Coding and
Editing Manual.
(99) Unknown
6. Vehicle Model (specify): 003
MUSTANG II
Applicable codes are found in your
NASS Data Collection, Coding and
Editing Manual.
(999) Unknown
7. Body Type 03
Note: Applicable codes may be found on
the back of this page.
8. Vehicle Identification Number
F9R03Y * * * * *
Left justify; Slash zeros and letter Z (0 and Z)
No VIN—Code all zeros
Unknown—Code all nine's

OFFICIAL RECORDS

9. Police Reported Vehicle Disposition 1
(0) Not towed due to vehicle damage
(1) Towed due to vehicle damage
(9) Unknown
10. Police Reported Travel Speed 072
Code to the nearest kph (NOTE: 000 means
less than 0.5 kph)
(160) 159.5 kph and above
(999) Unknown
45 mph X 1.6093 = 072 kph

11. Police Reported Alcohol Presence 0
(0) No alcohol present
(1) Yes (alcohol present)
(7) Not reported
(8) No driver present
(9) Unknown

Note: See variables 37 through 55
(Page 4) for information on Other Drugs

12. Alcohol Test Result For Driver 96
Code actual value (decimal implied
before first digit—0.xx)
(95) Test refused
(96) None given
(97) AC test performed, results unknown
(98) No driver present
(99) Unknown

Source: PAR

ACCIDENT RELATED

13. Speed Limit 080
(000) No statutory limit
Code posted or statutory speed limit
in kph
(999) Unknown
50 mph X 1.6093 = 080 kph
14. Attempted Avoidance Maneuver 99
(00) No impact
(01) No avoidance actions
(02) Braking (no lockup)
(03) Braking (lockup)
(04) Braking (lockup unknown)
(05) Releasing brakes
(06) Steering left
(07) Steering right
(08) Braking and steering left
(09) Braking and steering right
(10) Accelerating
(11) Accelerating and steering left
(12) Accelerating and steering right
(97) No driver present
(98) Other action (specify):
(99) Unknown
15. Accident Type 64
Applicable codes may be found on the
back of page two of this field form
(00) No impact
Code the number of the diagram that
best describes the accident circumstance
(98) Other accident type (specify):
(99) Unknown

**** SKIP TO VARIABLE GV37 IF GV07 DOES NOT EQUAL 01-49 ****

CODES FOR BODY TYPE

BEST AVAILABLE COPY

CDS APPLICABLE VEHICLES

Automobiles

- (01) Convertible (excludes sun-roof, t-bar)
- (02) 2-door sedan, hardtop, coupe
- (03) 3-door/2-door hatchback
- (04) 4-door sedan, hardtop
- (05) 5-door/4-door hatchback
- (06) Station wagon (excluding van and truck based)
- (07) Hatchback, number of doors unknown
- (08) Other automobile type (specify): _____
- (09) Unknown automobile type

Automobile Derivatives

- (10) Auto based pickup (includes El Camino, Caballero, Ranchero, Brat, and Rabbit pickup)
- (11) Auto based panel (cargo station wagon, auto based ambulance/hearse)
- (12) Large limousine - more than four side doors or stretched chassis
- (13) Three-wheel automobile or automobile derivative

Utility Vehicles ($\leq 4,500$ kgs GVWR)

- (14) Compact utility (Jeep CJ-2 - CJ-7, Scrambler, Golden Eagle, Renegade, Laredo, Wrangler, Cherokee [84 and after], Dispatcher, Raider, Bronco II, Bronco [76 and before], Explorer, S-10 Blazer, Geo Tracker, Bravada, S-15 Jimmy, Thing, Pathfinder, Trooper, Trooper II, Rodeo, Amigo, Navajo, 4-Runner, Montero, Samurai, Sidekick, Rocky)
- (15) Large utility (includes Jeep Cherokee [83 and before], Ramcharger, Trailduster, Bronco-fullsize [78 and after], fullsize Blazer, fullsize Jimmy, Landcruiser, Rover, Scout)
- (16) Utility station wagon (Chevy Suburban, GMC Suburban, Travelall, Grand Wagoneer, includes suburban limousine)
- (19) Utility, unknown body type

Van Based Light Trucks ($\leq 4,500$ kgs GVWR)

- (20) Minivan (Chrysler Town and Country, Caravan, Grand Caravan, Voyager, Grand Voyager, Mini-Ram, Dodge/Plymouth Vista, Aerostar, Villager, Lumina APV, Trans Sport, Silhouette, Astro, Safari, Toyota Van, Toyota Minivan, Previa, Nissan Minivan, Quest, Mitsubishi Minivan, Vanagon/Camper.)
- (21) Large van (B150-B350, Sportsman, Royal, Maxiwagon, Ram, Tradesman, Voyager [83 and before], E150-E350, Econoline, Clubwagon, Chateau, G10-G30, Chevy Van, Beauville, Sport Van, G15-G35, Rally Van, Vandura.)
- (22) Step van or walk-in van ($\leq 4,500$ kgs GVWR)
- (23) Van based motorhome ($\leq 4,500$ kgs GVWR)
- (24) Van based school bus ($\leq 4,500$ kgs GVWR)
- (25) Van based other bus ($\leq 4,500$ kgs GVWR)
- (28) Other van type (Hi-Cube Van, Kary) (specify): _____
- (29) Unknown van type

Light Conventional Trucks (Pickup style cab, $\leq 4,500$ kgs GVWR)

- (30) Compact pickup (D50, Colt P/U, Ram 50, Dakota, Arrow Pickup [foreign], Ranger, Courier, S-10, T-10, LUV, S-15, T-15, Sonoma, Datsun/Nissan Pickup, P'up, Mazda Pickup, Toyota Pickup, Mitsubishi Pickup)
- (31) Large Pickup (Jeep Pickup, Comanche, Ram Pickup, D100-D350, W100-W350, F100-F350, C10-C35, K10-K35, R10-R35, V10-V35, Silverado, Sierra, R100-R500.)

- (32) Pickup with slide-in camper
- (33) Convertible pickup
- (39) Unknown pickup style light conventional truck type

Other Light Trucks ($\leq 4,500$ kgs GVWR)

- (40) Cab chassis based (includes rescue vehicles, light stake, dump, and tow truck)
- (41) Truck based panel
- (42) Light truck based motorhome (chassis mounted)
- (45) Other light conventional truck type
- (48) Unknown light truck type
- (49) Unknown light vehicle type (automobile, utility, van, or light truck)

OTHER VEHICLES

Buses (Excludes Van Based)

- (50) School bus (designed to carry students, not cross country or transit)
- (58) Other bus type (e.g., transit, intercity, bus based motorhome) (specify): _____
- (59) Unknown bus type

Medium/Heavy Trucks ($> 4,500$ kgs GVWR)

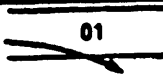

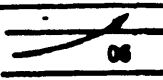

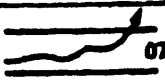

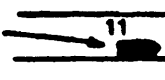

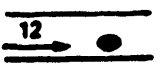

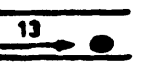

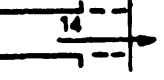

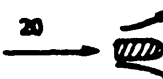

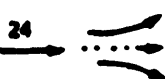

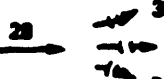

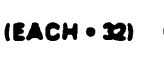

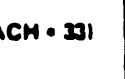

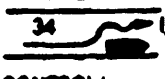

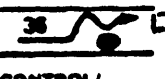

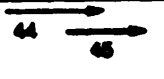

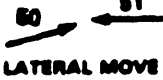

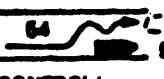

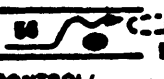

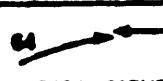

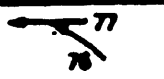

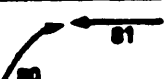

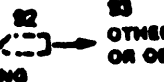

- (60) Step van ($> 4,500$ kgs GVWR)
- (61) Single unit straight truck ($4,500$ kgs $<$ GVWR $\leq 8,850$ kgs)
- (62) Single unit straight truck ($8,850$ kgs $<$ GVWR $\leq 12,000$ kgs)
- (63) Single unit straight truck ($> 12,000$ kgs GVWR)
- (64) Single unit straight truck, GVWR unknown
- (65) Medium/heavy truck based motorhome
- (67) Truck-tractor with no cargo trailer
- (68) Truck-tractor pulling one trailer
- (69) Truck-tractor pulling two or more trailers
- (70) Truck-tractor (unknown if pulling trailer)
- (78) Unknown medium/heavy truck type
- (79) Unknown truck type (light/medium/heavy)

Motored Cycles (Does Not Include All-Terrain Vehicles/Cycles)

- (80) Motorcycle
- (81) Moped (motorized bicycle)
- (82) Three-wheel motorcycle or moped
- (88) Other motored cycle (minibike, motorscooter) (specify): _____
- (89) Unknown motored cycle type

Other Vehicles

- (90) ATV (All-Terrain Vehicle) and ATC (All-Terrain Cycle)
- (91) Snowmobile
- (92) Farm equipment other than trucks
- (93) Construction equipment other than trucks
- (97) Other vehicle type
- (99) Unknown body type

OCCUPANT RELATED

16. Driver Presence in Vehicle 1
 (0) Driver not present
 (1) Driver present
 (9) Unknown
17. Number of Occupants This Vehicle 1
 (00-96) Code actual number of occupants for this vehicle
 (97) 97 or more
 (99) Unknown
18. Number of Occupant Forms Submitted 1

VEHICLE WEIGHT ITEMS

19. Vehicle Curb Weight 1,140
 Code weight to nearest 10 kilograms.
 (045) Less than 450 kilograms
 (610) 6,100 kilograms or more
 (999) Unknown
1,140 lbs X .4536 = 516 kgs
 Source:
20. Vehicle Cargo Weight 0
 Code weight to nearest 10 kilograms.
 (000) Less than 5 kilograms
 (450) 4,500 kilograms or more
 (999) Unknown
 lbs X .4536 = kgs

RECONSTRUCTION DATA

21. Towed Trailing Unit 0
 (0) No towed unit
 (1) Yes—towed trailing unit
 (9) Unknown
22. Documentation of Trajectory Data for This Vehicle 0
 (0) No
 (1) Yes
23. Post Collision Condition of Tree or Pole (For Highest Delta V) 0
 (0) Not collision (for highest delta V) with tree or pole
 (1) Not damaged
 (2) Cracked/sheared
 (3) Tilted <45 degrees
 (4) Tilted ≥45 degrees
 (5) Uprooted tree
 (6) Separated pole from base
 (7) Pole replaced
 (8) Other (specify):

 (9) Unknown

24. Rollover 0
 (0) No rollover (no overturning)
Rollover (primarily about the longitudinal axis)
 (1) Rollover, 1 quarter turn only
 (2) Rollover, 2 quarter turns
 (3) Rollover, 3 quarter turns
 (4) Rollover, 4 or more quarter turns (specify):

 (5) Rollover--end-over-end (i.e., primarily about the lateral axis)
 (9) Rollover (overturn), details unknown

OVERRIDE/UNDERRIDE (THIS VEHICLE)

25. Front Override/Underride (this Vehicle) 0
26. Rear Override/Underride (this Vehicle) 0
 (0) No override/underride, or not an end-to-end impact
Override (see specific CDC)
 (1) 1st CDC
 (2) 2nd CDC
 (3) Other not automated CDC (specify):

Underride (see specific CDC)
 (4) 1st CDC
 (5) 2nd CDC
 (6) Other not automated CDC (specify):

 (7) Medium/heavy truck or bus override
 (9) Unknown

HEADING ANGLE AT IMPACT FOR HIGHEST DELTA V

- Values: (000)-(359) Code actual value
 (997) Noncollision
 (998) Impact with object
 (999) Unknown
27. Heading Angle For This Vehicle 173
28. Heading Angle For Other Vehicle 273

29. Basis for Total Delta V (highest) 1*Delta V Calculated*

- (1) CRASH program—damage only routine
- (2) CRASH program—damage and trajectory routine
- (3) Missing vehicle algorithm

Delta V Not Calculated

- (4) At least one vehicle (which may be this vehicle) is beyond the scope of an acceptable reconstruction program, regardless of collision conditions.
- (5) All vehicles within scope (CDC applicable) of CRASH program but one of the collision conditions is beyond the scope of the CRASH program or other acceptable reconstruction technique, regardless of adequacy of damage data.
- (6) All vehicle and collision conditions are within scope of one of the acceptable reconstruction programs, but there is insufficient data available.

COMPUTER GENERATED DELTA V

30. Total Delta V

Secondary Highest

25.8 Nearest kph*(16.1 mph)*

(NOTE: 000 means less than 0.5 kph)

(160) 159.5 kph and above

(999) Unknown

31. Longitudinal Component of Delta V

+ ⊖ ⊖ ⊖ 3-3.1 Nearest kph*(-2.4 mph)*

(NOTE: 000 means greater than

-0.5 kph and less than +0.5 kph)

(±160) ±159.5 kph and above

(999) Unknown

32. Lateral Component of Delta V ⊕ ⊖ ⊖ 2 625.6 Nearest kph*(15.9 mph)*

(NOTE: 000 means greater than -0.5 kph and less than +0.5 kph)

(±160) ±159.5 kph and above

(999) Unknown

33. Energy Absorption

⊖ 4 8 ⊖ 0 048423.1 Nearest 100 joules*(35415.3 ft-lbs)*

(NOTE: 0000 means less than 50 joules)

(9997) 999,650 joules or more

(9999) Unknown

34. Confidence In Reconstruction Program Results (For Highest Delta V)

(0) No reconstruction

(1) Collision fits model — results appear reasonable

(2) Collision fits model — results appear high

(3) Collision fits model — results appear low

(4) Borderline reconstruction — results appear reasonable

35. Type of Vehicle Inspection

(0) No inspection

(1) Complete inspection

(2) Partial inspection (specify):

36. Is this an AOPS Vehicle?

(0) No

(1) Yes - researcher determined

(2) VIN determined air bag system

(3) VIN determined automatic (passive) belts

(4) VIN determined air bag and automatic (passive) belts

IS OLDMISS APPLICABLE FOR THIS VEHICLE? [] YES [X] NO

IF YES: IS A COMPLETED OLDMISS PROGRAM SUMMARY INCLUDED? [] YES [] NO

37. Police Reported Other Drug Presence ϕ

- (0) No other drugs present
- (1) Yes (other drug present)
- (7) Not reported
- (8) No driver present
- (9) Unknown

38. Police Reported Drug Evaluation Classification (DEC) Test For Driver ϕ

- (0) No DEC process available or given
- (1) DEC process given, results known
- (2) DEC process given, results unknown
- (3) DEC process available, unknown if given
- (8) No driver present

39. Other Drug Specimen Test Type For Driver ϕ

- (0) No specimen test given
- (1) Blood test
- (2) Urine test
- (3) Other specimen tests (specify):

- (7) Unspecified specimen test
- (8) No driver present
- (9) Unknown if specimen test given

DRUG EVALUATION CLASSIFICATION

OTHER DRUGS TEST RESULTS FOR DRIVER

	DEC Test Results	Specimen Test Results
Narcotic Drug	40. <u> ϕ </u>	41. <u> ϕ </u>

Codes For DEC Test Results

- (0) No DEC test given
- (1) Passed DEC test
- (2) Failed DEC test
- (3) DEC test given—results unknown
- (8) No driver present
- (9) Unknown if DEC test given

Codes for Specimen Test Results

- (0) No specimen test given
- (1) Drug not found in specimen
- (2) Drug found in specimen
- (7) Specimen test given, results unknown or not obtained
- (8) No driver present
- (9) Unknown if specimen test given

OTHER DATA

56. Driver's Zip Code

- (00000) Driver not present
 (00001) Driver not a resident of U.S. or territories
 Code actual 5-digit zip code
 (99999) Unknown

57. Driver's Race/Ethnic Origin

- (0) Driver not present
 (1) White (non-Hispanic)
 (2) Black (non-Hispanic)
 (3) White (Hispanic)
 (4) Black (Hispanic)
 (5) American Indian, Eskimo or Aleut
 (6) Asian or Pacific Islander
 (8) Other (specify):
 (9) Unknown

58. Vehicle Special Use (This Trip)

- (0) No special use
 (1) Taxi
 (2) Vehicle used as school bus
 (3) Vehicle used as other bus
 (4) Military
 (5) Police
 (6) Ambulance
 (7) Fire truck or car
 (8) Other (specify):
 (9) Unknown

ROLLOVER DATA

If GV07 (Body Type) \neq 1-49, leave GV59-GV63 blank.
 If GV24 (Rollover) = 0, then GV59-GV63 must equal 0.
 If GV24 = 9, then GV59-GV63 must equal 9.

59. Rollover Initiation Type

- (0) No rollover
 (1) Trip-over
 (2) Flip-over
 (3) Turn-over
 (4) Climb-over
 (5) Fall-over
 (6) Bounce-over
 (7) Collision with another vehicle
 (8) Other rollover initiation type specify):
 (9) Unknown rollover initiation type

60. Location of Rollover Initiation

- (0) No rollover
 (1) On roadway
 (2) On shoulder—paved
 (3) On shoulder—unpaved
 (4) On roadside or divided trafficway median
 (9) Unknown

61. Rollover Initiation Object Contacted

 ϕ ϕ

62. Location on Vehicle Where Initial Principal Tripping Force Is Applied

 ϕ

- (0) No rollover
 (1) Wheels/tires
 (2) Side plane
 (3) End plane
 (4) Undercarriage
 (5) Other location on vehicle (specify):
 (8) Non-contact rollover forces (specify):
 (9) Unknown

63. Direction of Initial Roll

 ϕ

- (0) No rollover
 (1) Roll right - primarily about the longitudinal axis
 (2) Roll left - primarily about the longitudinal axis
 (5) End-over-end (i.e., primarily about the lateral axis)
 (9) Unknown roll direction

PRECRASH DATA

64. Pre-Event Movement (Prior to Recognition of Critical Event)

 ϕ 1

- (01) Going straight
 (02) Slowing or stopping in traffic lane
 (03) Starting in traffic lane
 (04) Stopped in traffic lane
 (05) Passing or overtaking another vehicle
 (06) Disabled or parked in travel lane
 (07) Leaving a parking position
 (08) Entering a parking position
 (09) Turning right
 (10) Turning left
 (11) Making a U-turn
 (12) Backing up (other than for parking position)
 (13) Negotiating a curve
 (14) Changing lanes
 (15) Merging
 (16) Successful avoidance maneuver to a previous critical event
 (97) Other (specify):
 (98) No driver present
 (99) Unknown

CODES FOR ROLLOVER INITIATION OBJECT CONTACTED

- (00) No rollover
- (01-30) — Vehicle Number

Noncollision

- (31) Turn-over — fall-over
- (33) Jackknife

Collision With Fixed Object

- (41) Tree (≤ 10 cm in diameter)
- (42) Tree (> 10 cm in diameter)
- (43) Shrubbery or bush
- (44) Embankment

- (45) Breakaway pole or post (any diameter)

Nonbreakaway Pole or Post

- (50) Pole or post (≤ 10 cm in diameter)
- (51) Pole or post (> 10 cm but ≤ 30 cm in diameter)
- (52) Pole or post (> 30 cm in diameter)
- (53) Pole or post (diameter unknown)

- (54) Concrete traffic barrier
- (55) Impact attenuator
- (56) Other traffic barrier (includes guardrail)
(specify): _____

- (57) Fence
- (58) Wall
- (59) Building
- (60) Ditch or culvert
- (61) Ground
- (62) Fire hydrant
- (63) Curb
- (64) Bridge
- (68) Other fixed object (specify): _____

- (69) Unknown fixed object

Collision with Nonfixed Object

- (71) Motor vehicle not in-transport
- (76) Animal
- (77) Train
- (78) Trailer, disconnected in transport
- (88) Other nonfixed object (specify): _____

- (89) Unknown nonfixed object

- (98) Other event (specify): _____

- (99) Unknown event or object

PRECRASH DATA (Continued)

65. Critical Precrash Event 6*This Vehicle Loss of Control Due To:*

- (01) Blow out or flat tire
- (02) Stalled engine
- (03) Disabling vehicle failure (e.g., wheel fell off) (specify): _____
- (04) Non-disabling vehicle problem (e.g., hood flew up) (specify): _____
- (05) Poor road conditions (puddle, pot hole, ice, etc.) (specify): _____
- (06) Traveling too fast for conditions
- (08) Other cause of control loss (specify): _____
- (09) Unknown cause of control loss

This Vehicle Traveling

- (10) Over the lane line on left side of travel lane
- (11) Over the lane line on right side of travel lane
- (12) Off the edge of the road on the left side
- (13) Off the edge of the road on the right side
- (14) End departure
- (15) Turning left at intersection
- (16) Turning right at intersection
- (17) Crossing over (passing through) intersection
- (19) Unknown travel direction

Other Motor Vehicle In Lane

- (50) Stopped
- (51) Traveling in same direction with lower speed (i.e., lower steady speed or decelerating)
- (52) Traveling in same direction with higher speed
- (53) Traveling in opposite direction
- (54) In crossover
- (55) Backing
- (59) Unknown travel direction of other motor vehicle in lane

Other Motor Vehicle Encroaching Into Lane

- (60) From adjacent lane (same direction)—over left lane line
- (61) From adjacent lane (same direction)—over right lane line
- (62) From opposite direction—over left lane line
- (63) From opposite direction—over right lane line
- (64) From parking lane
- (65) From crossing street, turning into same direction
- (66) From crossing street, across path
- (67) From crossing street, turning into opposite direction
- (68) From crossing street, intended path not known
- (70) From driveway, turning into same direction
- (71) From driveway, across path
- (72) From driveway, turning into opposite direction
- (73) From driveway, intended path not known
- (74) From entrance to limited access highway
- (78) Encroachment by other vehicle—details unknown

Pedestrian or Pedalcyclist, or Other Nonmotorist

- (80) Pedestrian in roadway
- (81) Pedestrian approaching roadway
- (82) Pedestrian - unknown location
- (83) Pedalcyclist or other nonmotorist in roadway (specify): _____
- (84) Pedalcyclist or other nonmotorist approaching roadway (specify): _____
- (85) Pedalcyclist or other nonmotorist—unknown location (specify): _____

Object or Animal

- (87) Animal in roadway
- (88) Animal approaching roadway
- (89) Animal—unknown location
- (90) Object in roadway
- (91) Object approaching roadway
- (92) Object—unknown location
- (98) Other critical precrash event (specify): _____
- (99) Unknown

For Corrective Actions Attempted see variable GV14
(Attempted Avoidance Manuever)

66. Precrash Stability After Avoidance Maneuver 9

- (0) No avoidance maneuver
- (1) Tracking
- (2) Skidding longitudinally—rotation less than 30 degrees
- (3) Skidding laterally—clockwise rotation
- (4) Skidding laterally—counterclockwise rotation
- (7) Other vehicle loss-of-control (specify): _____
- (8) No driver present
- (9) Precrash stability unknown

67. Precrash Directional Consequences of Avoidance Maneuver (Corrective Action) 9

- (0) No avoidance maneuver
- (1) Vehicle stayed in travel lane where avoidance maneuver was initiated
- (2) Vehicle stayed on roadway but left travel lane where avoidance maneuver was initiated
- (3) Vehicle stayed on roadway, not known if left travel lane where avoidance maneuver was initiated
- (4) Vehicle departed roadway
- (5) Avoidance maneuver initiated off roadway
- (8) No driver present
- (9) Directional consequences unknown

THE EXTERIOR VEHICLE, INTERIOR VEHICLE,
OCCUPANT ASSESSMENT, AND OCCUPANT INJURY FORMS.

EXTERIOR VEHICLE FORM

**NATIONAL ACCIDENT SAMPLING SYSTEM
CRASHWORTHINESS DATA SYSTEM**

1. Primary Sampling Unit Number _____		3. Vehicle Number <u>42</u>	
2. Case Number - Stratum <u>DSE-93-AB-007</u>			

VEHICLE IDENTIFICATION

VIN F 9 R 0 3 Y * * * * * Model Year 7 9
Vehicle Make (specify): Ford Vehicle Model (specify): MUSTANG II 3-DOOR

LOCATOR

Locate the end of the damage with respect to the vehicle longitudinal center line or bumper corner for end impacts or an undamaged axle for side impacts.

Specific Impact No.	Location of Direct Damage	Location of Field L
Φ1	BEGINS 35.6cm (14") FORWARD OF L/R AXLE	BEGINS 61cm (24") FORWARD OF L/R AXLE

CRUSH PROFILE IN CENTIMETERS

NOTES: Identify the plane at which the C-measurements are taken (e.g., at bumper, above bumper, at sill, above sill, etc.) and label adjustments (e.g., free space).

Measure and document on the vehicle diagram the location of maximum crush.

Measure C1 to C6 from driver to passenger side in front or rear impacts and rear to front in side impacts.

Free space value is defined as the distance between the baseline and the original body contour taken at the individual C locations. This may include the following: bumper lead, bumper taper, side protrusion, side taper, etc. Record the value for each C-measurement and maximum crush.

Use as many lines/columns as necessary to describe each damage profile.

MEASUREMENTS IN CENTIMETERS

NOTES: Sketch new perimeter and cross hatch direct damage and single hatch induced damage on all views. Annotate observations which might be useful in reconstructing the accident (e.g., grass in tire bead, direction of striations, scuff on sidewalls, etc.). If pulling trailer, sketch type of trailer and damage received on the back of this page.

Annotate any damage caused by extrication such as component removal by torching, prying, or hydraulic shears.

CODES FOR INTERIOR COMPONENTS

FRONT

- (01) Windshield
- (02) Mirror
- (03) Sunvisor
- (04) Steering wheel rim
- (05) Steering wheel hub/spoke
- (06) Steering wheel (combination of codes 04 and 05)
- (07) Steering column, transmission selector lever, other attachment
- (08) Add on equipment (e.g., CB, tape deck, air conditioner)
- (09) Left instrument panel and below
- (10) Center instrument panel and below
- (11) Right instrument panel and below
- (12) Glove compartment door
- (13) Knee bolster
- (14) Windshield including one or more of the following: front header, A (A1/A2)-pillar, instrument panel, mirror, or steering assembly (driver side only)
- (15) Windshield including one or more of the following: front header, A (A1/A2)-pillar, instrument panel, or mirror (passenger side only)
- (16) Driver side air bag compartment cover
- (17) Passenger side air bag compartment cover
- (18) Windshield reinforced by exterior object (specify): _____
- (19) Other front object (specify): _____

LEFT SIDE

- (20) Left side interior surface, excluding hardware or armrests
- (21) Left side hardware or armrest
- (22) Left A (A1/A2)-pillar

(23) Left B-pillar

(24) Other left pillar (specify): _____

(25) Left side window glass or frame

(26) Left side window glass including one or more of the following: frame, window sill, A (A1/A2)-pillar, B-pillar, or roof side rail.

(27) Other left side object (specify): _____

(28) Left side window sill

RIGHT SIDE

(30) Right side interior surface, excluding hardware or armrests

(31) Right side hardware or armrest

(32) Right A (A1/A2)-pillar

(33) Right B-pillar

(34) Other right pillar (specify): _____

(35) Right side window glass or frame

(36) Right side window glass including one or more of the following: frame, window sill, A (A1/A2)-pillar, B pillar, or roof side rail.

(37) Other right side object (specify): _____

(38) Right side window sill

INTERIOR

- (40) Seat, back support
- (41) Belt restraint webbing/buckle
- (42) Belt restraint B-pillar attachment point
- (43) Other restraint system component (specify): _____
- (44) Head restraint system
- (45) Air bag (use codes "16" and "17" for injuries sustained from air bag compartment covers)

(46) Other occupants (specify): _____

(47) Interior loose objects

(48) Child safety seat (specify): _____

(49) Other interior object (specify): _____

ROOF

- (50) Front header
- (51) Rear header
- (52) Roof left side rail
- (53) Roof right side rail
- (54) Roof or convertible top

FLOOR

- (56) Floor (including toe pan)
- (57) Floor or console mounted transmission lever, including console
- (58) Parking brake handle
- (59) Foot controls including parking brake

REAR

- (60) Backlight (rear window)
- (61) Backlight storage rack, door, etc.
- (62) Other rear object (specify): _____

CONFIDENCE LEVEL OF CONTACT POINT

- (1) Certain
- (2) Probable
- (3) Possible
- (9) Unknown

AUTOMATIC RESTRAINTS

NOTES: Encode the data for each applicable front seat position. The attribute for the variables may be found below. Restraint systems should be assessed during the vehicle inspection then coded on the Occupant Assessment Form.

CHILD SAFETY SEAT FIELD ASSESSMENT

When a child safety seat is present enter the occupant's number in the first row and complete the column below the occupant's number using the codes listed below. Complete a column for each child safety seat present.

Occupant Number						
1. Type of Child Safety Seat						
2. Child Safety Seat Orientation						
3. Child Safety Seat Harness Usage			0			
4. Child Safety Seat Shield Usage						
5. Child Safety Seat Tether Usage						
6. Child Safety Seat Make/Model	Specify Below for Each Child Safety Seat					

1. Type of Child Safety Seat

- (0) No child safety seat
- (1) Infant seat
- (2) Toddler seat
- (3) Convertible seat
- (4) Booster seat
- (7) Other type child safety seat (specify):

- (8) Unknown child safety seat type
- (9) Unknown if child safety seat used

2. Child Safety Seat Orientation

- (00) No child safety seat
- Designed for Rear Facing for This Age/Weight
- (01) Rear facing
- (02) Forward facing
- (08) Other orientation (specify):

- (09) Unknown orientation

Designed for Forward Facing for This Age/Weight

- (11) Rear facing
- (12) Forward facing
- (18) Other orientation (specify):

- (19) Unknown orientation

Unknown Design or Orientation For This Age/Weight, or Unknown Age/Weight

- (21) Rear facing
- (22) Forward facing
- (28) Other orientation (specify):

- (29) Unknown orientation

- (99) Unknown if child safety seat used

3. Child Safety Seat Harness Usage

4. Child Safety Seat Shield Usage

- 5. Child Safety Seat Tether Usage
- Note: Options Below Are Used for Variables 3-5.
- (00) No child safety seat

Not Designed with Harness/Shield/Tether

- (01) After market harness/shield/tether added, not used
- (02) After market harness/shield/tether used
- (03) Child safety seat used, but no after market harness/shield/tether added
- (09) Unknown if harness/shield/tether added or used

Designed With Harness/Shield/Tether

- (11) Harness/shield/tether not used
- (12) Harness/shield/tether used
- (19) Unknown if harness/shield/tether used

Unknown If Designed With Harness/Shield/Tether

- (21) Harness/shield/tether not used
- (22) Harness/shield/tether used
- (29) Unknown if harness/shield/tether used

- (99) Unknown if child safety seat used

6. Child Safety Seat Make/Model

(Specify make/model and occupant number)

HEAD RESTRAINTS/SEAT EVALUATION

NOTES: Encode the applicable data for each seat position in the vehicle. The attribute for these variables may be found at the bottom of the page. Head restraint type/damage and seat type/performance should be assessed during the vehicle inspection then coded on the Occupant Assessment Form.

Seat Performance (this Occupant Position)

- (0) Occupant not seated or no seat
- (1) No seat performance failure(s)
- (2) Seat adjusters failed
- (3) Seat back folding locks or "seat back" failed specify: _____
- (4) Seat tracks/anchors failed
- (5) Deformed by impact of occupant
- (6) Deformed by passenger compartment intrusion (specify): _____

(7) Combination of above (specify): _____

(8) Other (specify): _____

(9) Unknown _____

Seat Orientation (this Occupant Position)

- (0) Occupant not seated or no seat
- (1) Forward facing seat
- (2) Rear facing seat
- (3) Side facing seat (inward)
- (4) Side facing seat (outward)
- (8) Other (specify): _____

(9) Unknown _____

DESCRIBE ANY INDICATION OF ABNORMAL OCCUPANT POSTURE (I.E., UNUSUAL OCCUPANT CONTACT PATTERN)

EJECTION/ENTRAPMENT DATA

Complete the following if the researcher has any indication that an occupant was either ejected from or entrapped in the vehicle. Code the appropriate data on the Occupant Assessment Form.

EJECTION No [☒] Yes []

Describe indications of ejection and body parts involved in partial ejection(s):

Occupant Number						
Ejection						
(Note on Vehicle Interior Sketch) Ejection Area						
Ejection Medium						
Medium Status						

Ejection

- (1) Complete ejection
- (2) Partial ejection
- (3) Ejection, Unknown degree
- (9) Unknown

Ejection Area

- (1) Windshield
- (2) Left front
- (3) Right front
- (4) Left rear
- (5) Right rear
- (6) Rear

(7) Roof

- (8) Other area (e.g., back of pickup, etc.) (specify):

(9) Unknown**Ejection Medium**

- (1) Door/hatch/tailgate
- (2) Nonfixed roof structure
- (3) Fixed glazing
- (4) Nonfixed glazing (specify):

(5) Integral structure

- (8) Other medium (specify):

(9) Unknown**Medium Status (Immediately Prior to Impact)**

- (1) Open
- (2) Closed
- (3) Integral structure
- (9) Unknown

ENTRAPMENT No [☒] Yes []

Describe entrapment mechanism: _____

Component(s): _____

(Note in vehicle interior diagram)

OCCUPANT ASSESSMENT FORM

Form Approved
O.M.B. No. 2127-0021

**NATIONAL ACCIDENT SAMPLING SYSTEM
CRASHWORTHINESS DATA SYSTEM**

OCCUPANT'S SEATING

1. Primary Sampling Unit Number _____
2. Case Number - Stratum DSI-93-AB-007
3. Vehicle Number 02
4. Occupant Number 01

OCCUPANT'S CHARACTERISTICS

5. Occupant's Age 2 1
Code actual age at time of accident.
(00) Less than one year old (specify by month):

(97) 97 years and older
(99) Unknown
6. Occupant's Sex 1
(1) Male
(2) Female
(9) Unknown
7. Occupant's Height 9 9 9
Code actual height to the nearest
centimeter.
(999) Unknown

____ inches X 2.54 = ____ centimeters
8. Occupant's Weight 9 9 9
Code actual weight to the nearest
kilogram.
(999) Unknown

____ pounds X .4536 = ____ kilograms
9. Occupant's Role 1
(1) Driver
(2) Passenger
(9) Unknown

10. Occupant's Seat Position _ / _
Front Seat
 (11) Left side
 (12) Middle
 (13) Right side
 (14) Other (specify): _____
 (15) On or in the lap of another occupant

Second Seat

- (21) Left side
(22) Middle
(23) Right side
(24) Other (specify): _____
(25) On or in the lap of another occupant

Third Seat

- (31) Left side
(32) Middle
(33) Right side
(34) Other (specify): _____
(35) On or in the lap of another occupant

Fourth Seat

- (41) Left side
(42) Middle
(43) Right side
(44) Other (specify): _____
(45) On or in the lap of another occupant

- (97) In or on unenclosed area
(98) Other seat (specify): _____
(99) Unknown

- | | |
|------------------------|---|
| 11. Occupant's Posture | 9 |
| (0) Normal posture | |

Abnormal posture

- (1) **Kneeling or standing on seat**
- (2) **Lying on or across seat**
- (3) **Kneeling, standing or sitting in front of seat**
- (4) **Sitting sideways or turned to talk with another occupant or to look out a rear window**
- (5) **Sitting on a console**
- (6) **Lying back in a reclined seat position**
- (7) **Bracing with feet or hands on a surface in front of seat**
- (8) **Other abnormal posture (specify):**
- (9) **Unknown**

EJECTION/ENTRAPMENT

12. Ejection φ

- (0) No ejection
- (1) Complete ejection
- (2) Partial ejection
- (3) Ejection, unknown degree
- (9) Unknown

13. Ejection Area φ

- (0) No ejection
- (1) Windshield
- (2) Left front
- (3) Right front
- (4) Left rear
- (5) Right rear
- (6) Rear
- (7) Roof
- (8) Other area (e.g., back of pickup, etc.)
(specify): _____
- (9) Unknown

14. Ejection Medium φ

- (0) No ejection
- (1) Door/hatch/tailgate
- (2) Nonfixed roof structure
- (3) Fixed glazing
- (4) Nonfixed glazing (specify): _____
- (5) Integral structure
- (8) Other medium (specify): _____
- (9) Unknown

15. Medium Status (Immediately Prior To Impact) φ

- (0) No ejection
- (1) Open
- (2) Closed
- (3) Integral structure
- (9) Unknown

16. Entrapment φ

(NOTE: Entrapped means that part of the person was in the vehicle and mechanically restrained; jammed doors and immobilizing injuries by themselves are not sufficient to constitute entrapment.)

- (0) Not entrapped
- (1) Entrapped
- (9) Unknown

RESTRAINT SYSTEM EVALUATION

17. Manual (Active) Belt System Availability 4

- (0) None available
- (1) Belt removed/destroyed
- (2) Shoulder belt
- (3) Lap belt
- (4) Lap and shoulder belt
- (5) Belt available—type unknown

Integral Belt Partially Destroyed

- (6) Shoulder belt (lap belt destroyed/removed)
- (7) Lap belt (shoulder belt destroyed/removed)

(8) Other belt (specify): _____

(9) Unknown

18. Manual (Active) Belt System Use φ φ

- (00) None used, not available, or belt removed/destroyed
- (01) Inoperative (specify): _____

(02) Shoulder belt

(03) Lap belt

(04) Lap and shoulder belt

(05) Belt used—type unknown

(08) Other belt used (specify): _____

(12) Shoulder belt used with child safety seat

(13) Lap belt used with child safety seat

(14) Lap and shoulder belt used with child safety seat

(15) Belt used with child safety seat—type unknown

(18) Other belt used with child safety seat (specify): _____

(99) Unknown if belt used

19. Proper Use of Manual (Active) Belts φ

- (0) None used or not available
- (1) Belt used properly
- (2) Belt used properly with child safety seat

Belt Used Improperly

(3) Shoulder belt worn under arm

(4) Shoulder belt worn behind back or seat

(5) Belt worn around more than one person

(6) Lap belt worn on abdomen

(7) Lap belt or lap and shoulder belt used improperly with child safety seat (specify): _____

(8) Other improper use of manual belt system (specify): _____

(9) Unknown

20. Manual (Active) Belt Failure Modes During Accident φ

- (0) No manual belt used
- (1) No manual belt failure(s)
- (2) Torn webbing (stretched webbing not included)
- (3) Broken buckle or latchplate
- (4) Upper anchorage separated
- (5) Other anchorage separated (specify): _____

(6) Broken retractor

(7) Combination of above (specify): _____

(8) Other manual belt failure (specify): _____

(9) Unknown

21. Air Bag System Availability/Function φ

- (0) Not equipped/not available
- (1) Air bag

Non-functional

(2) Air bag disconnected (specify): _____

(3) Air bag not reinstalled

(9) Unknown

22. Air Bag System Deployment φ

- (0) Not equipped/not available
- (1) Air bag deployed during accident (as a result of impact)
- (2) Air bag deployed inadvertently just prior to accident
- (3) Air bag deployed, accident sequence undetermined
- (4) Nondeployed
- (5) Unknown if deployed
- (6) Air bag deployed as a result of a noncollision event during accident sequence (e.g., fire, explosion, electrical)
- (9) Unknown

23. Are There Indications of Air Bag System Failure? φ

(0) Not equipped/not available

(1) No

(2) Yes (specify): _____

(9) Unknown

Note: See Variables 44 through 48 (Page 5) for Information on Automatic Belts

24. Police Reported Restraint Use φ

- (0) None used
- (1) Police did not indicate restraint use
- (2) Shoulder belt
- (3) Lap belt
- (4) Lap and shoulder belt
- (5) Belt used, type not specified
- (6) Child safety seat
- (7) Other or automatic restraint (specify): _____

(8) Restrained, type unknown

(9) Police indicated "unknown"

HEAD RESTRAINT AND SEAT EVALUATION

25. Head Restraint Type/Damage by Occupant
at This Occupant Position3

- (0) No head restraints
- (1) Integral—no damage
- (2) Integral—damaged during accident
- (3) Adjustable—no damage
- (4) Adjustable—damaged during accident
- (5) Add-on—no damage
- (6) Add-on—damaged during accident
- (8) Other (specify):

(9) Unknown

26. Seat Type (this Occupant Position)

φ 2

- (00) Occupant not seated or no seat
- (01) Bucket
- (02) Bucket with folding back
- (03) Bench
- (04) Bench with separate back cushions
- (05) Bench with folding back(s)
- (06) Split bench with separate back cushions
- (07) Split bench with folding back(s)
- (08) Pedestal (i.e., column supported)
- (09) Other seat type (specify):

(10) Box mounted seat (i.e., van type)(99) Unknown

27. Seat Performance (this Occupant Position)

5

- (0) Occupant not seated or no seat
- (1) No seat performance failure(s)
- (2) Seat adjusters failed
- (3) Seat back folding locks or "seat back" failed
- (4) Seat track/anchors failed
- (5) Deformed by impact of occupant
- (6) Deformed by passenger compartment intrusion (specify):

(7) Combination of above (specify):(8) Other (specify):(9) Unknown

CHILD SAFETY SEAT28. Child Safety Seat Make/Model ϕ ϕ ϕ

(000) No child safety seat

Applicable codes are found in your NASS CDS
Data Collection, Coding and Editing

(950) Built-in child safety seat

(997) Other make/model (specify):

(998) Unknown make/model

(999) Unknown if child safety seat used

29. Type of Child Safety Seat ϕ

(0) No child safety seat

(1) Infant seat

(2) Toddler seat

(3) Convertible seat

(4) Booster seat

(7) Other type child safety seat (specify):

(8) Unknown child safety seat type

(9) Unknown if child safety seat used

30. Child Safety Seat Orientation ϕ ϕ

(00) No child safety seat

Designed for Rear Facing for This Age/Weight

(01) Rear facing

(02) Forward facing

(08) Other orientation (specify):

(09) Unknown orientation

Designed For Forward Facing for This Age/Weight

(11) Rear facing

(12) Forward facing

(18) Other orientation (specify):

(19) Unknown orientation

*Unknown Design or Orientation For This
Age/Weight, or Unknown Age/Weight*

(21) Rear facing

(22) Forward facing

(28) Other orientation (specify):

(29) Unknown orientation

(99) Unknown if child safety seat used

31. Child Safety Seat Harness Usage ϕ ϕ32. Child Safety Seat Shield Usage ϕ ϕ33. Child Safety Seat Tether Usage ϕ ϕNote: Options below applicable to
Variables OA31-OA33.

(00) No child safety seat

Not Designed With Harness/Shield/Tether(01) After market harness/shield/tether
added, not used

(02) After market harness/shield/tether used

(03) Child safety seat used, but no after market
harness/shield/tether added(09) Unknown if harness/shield/tether
added or used*Designed With Harness/Shield/Tether*

(11) Harness/shield/tether not used

(12) Harness/shield/tether used

(19) Unknown if harness/shield/tether used

Unknown If Designed With Harness/Shield/Tether

(21) Harness/shield/tether not used

(22) Harness/shield/tether used

(29) Unknown if harness/shield/tether used

(99) Unknown if child safety seat used

INJURY CONSEQUENCES34. Injury Severity (Police Rating) 2

- (0) O - No injury
- (1) C - Possible injury
- (2) B - Nonincapacitating injury
- (3) A - Incapacitating injury
- (4) K - Killed
- (5) U - Injury, severity unknown
- (6) Died prior to accident
- (9) Unknown

35. Treatment - Mortality 2

- (0) No treatment
- (1) Fatal
- (2) Fatal - ruled disease (specify):

Nonfatal

- (3) Hospitalization
- (4) Transported and released
- (5) Treatment at scene - nontransported
- (6) Treatment later
- (8) Treatment - other (specify):

- (9) Unknown

36. Type Of Medical Facility (for Initial Treatment) 2

- (0) Not treated at a medical facility
- (1) Trauma center
- (2) Hospital
- (3) Medical clinic
- (4) Physician's office
- (5) Treatment later at medical facility
- (8) Other (specify):

- (9) Unknown

37. Hospital Stay 2 2

(00) Not Hospitalized

Code the number of days (up through 60) that the occupant stayed in hospital.

- (61) 61 days or more
- (99) Unknown

99. Case Occupant φ

- (0) Not the Case Occupant
- (1) This is the Case Occupant
- (2) This is the Case Occupant in another case.

38. Working Days Lost 2 2

Code the number of days (up through 60) that the occupant lost from work due to the accident

- (00) No working days lost
- (61) 61 days or more
- (62) Fatally injured
- (97) Not working prior to accident
- (99) Unknown

STOP - GO TO VARIABLE 44 ON PAGE 7**VARIABLES 39 THROUGH 43 ARE COMPLETED BY THE ZONE CENTER**39. Time to Death φ φ

Code number of hours from time of accident to time of death up through 24 hours. If time of death is greater than 24 hours, code number of days. (Note: 1 day = 31, 2 days = 32, ... n days = 30 + n up through 30 days = 60)

- (00) Not fatal
- (96) Fatal - ruled disease
- (99) Unknown

40. 1st Medically Reported Cause of Death φ φ41. 2nd Medically Reported Cause of Death φ φ42. 3rd Medically Reported Cause of Death φ φ

Code the Occupant Injury from line number(s) for the medically reported injury(s) which reportedly contributed to this occupant's death

- (00) Not fatal or no additional causes
- (96) Mode of death given but specific injuries are not linked to cause of death. (specify):

(97) Other result (includes fatal ruled disease) (specify):

(99) Unknown

43. Number of Recorded Injuries for This Occupant 2 7

Code the actual number of injuries recorded for this occupant.

- (00) No recorded injuries
- (97) Injured, details unknown
- (99) Unknown if injured

AUTOMATIC BELT SYSTEM

44. Automatic (Passive) Belt System Availability/ Function φ
- (0) Not equipped/not available
 - (1) 2 point automatic belts
 - (2) 3 point automatic belts
 - (3) Automatic belts - type unknown

Non-functional

- (4) Automatic belts destroyed or rendered inoperative
- (9) Unknown

45. Automatic (Passive) Belt System Use φ
- (0) Not equipped/not available/destroyed or rendered inoperative
 - (1) Automatic belt in use
 - (2) Automatic belt not in use (manually disconnected, motorized track inoperative) (specify): _____
 - (3) Automatic belt use unknown
 - (9) Unknown

46. Automatic (Passive) Belt System Type φ
- (0) Not equipped/not available
 - (1) Non-motorized system
 - (2) Motorized system
 - (9) Unknown

47. Proper Use of Automatic (Passive) Belt System φ
- (0) Not equipped/not available/not used
 - (1) Automatic belt used properly
 - (2) Automatic belt used properly with child safety seat
- Automatic Belt Used Improperly*
- (3) Automatic shoulder belt worn under arm
 - (4) Automatic shoulder belt worn behind back
 - (5) Automatic belt worn around more than one person
 - (6) Lap portion of automatic belt worn on abdomen
 - (7) Automatic lap and shoulder belt or automatic shoulder belt used improperly with child safety seat (specify): _____
 - (8) Other improper use of automatic belt system (specify): _____
 - (9) Unknown

48. Automatic (Passive) Belt Failure Modes During Accident φ
- (0) Not equipped/not available/not in use
 - (1) No automatic belt failure(s)
 - (2) Torn webbing (stretched webbing not included)
 - (3) Broken buckle or latchplate
 - (4) Upper anchorage separated
 - (5) Other anchorage separated (specify): _____
 - (6) Broken retractor
 - (7) Combination of above (specify): _____
 - (8) Other automatic belt failure (specify): _____
 - (9) Unknown

49. Seat Orientation (this Occupant Position) 1
- (0) Occupant not seated or no seat
 - (1) Forward facing seat
 - (2) Rear facing seat
 - (3) Side facing seat (inward)
 - (4) Side facing seat (outward)
 - (8) Other (specify): _____
 - (9) Unknown

STOP - VARIABLES 50 THROUGH 52 ARE COMPLETED BY THE ZONE CENTER

TRAUMA DATA

50. Glasgow Coma Scale (GCS) Score 9 1
(at Medical Facility)
- (00) Not injured
 - (01) Injured - not treated at medical facility
 - (02) No GCS Score at medical facility
 - (03-15) Code the actual value of the initial GCS Score recorded at medical facility.
 - (97) Injured, details unknown
 - (99) Unknown if injured
51. Was the Occupant Given Blood? 9
- (1) No - blood not given
 - (2) Yes - blood given (specify units): _____
 - (9) Unknown if blood given
52. Arterial Blood Gases (ABG) - HCO₃ 9 1
- (00) Not injured
 - (01) Injured, ABGs not measured or reported
 - (02-50) Code the actual value of the HCO₃
 - (96) ABGs reported, HCO₃ unknown
 - (97) Injured, details unknown
 - (99) Unknown if injured

IMPORTANT INFORMATION

This is the patient's copy of your Emergency Department Record. Please review the above information for accuracy and completeness. Pay special attention to the name, address, telephone number and insurance policy numbers.

1. Insurance Information

If you have insurance but did not have the necessary information in order for the hospital to bill at the time you were registered, please call the insurance department at Monday thru Friday 8:00 AM to 5:00 PM.

2. Emergency Department Physician's Charges

If you are treated by an Emergency Department Physician, you will receive a separate bill for his services from a private billing company. If you did not give your insurance information upon registration, you will need to call locally at and give them your insurance information.

3. Radiology Charges

If you have x-rays made, the radiologist will bill you separately for the reading of your x-rays.

The examination and treatment you have received in the Emergency/Outpatient Department has been rendered on an emergency basis only and is not intended to be a substitute for complete continuing medical care. Your records and test reports will be available to your personal physician or the local physician on call at the time you were seen. It is important that you report to this physician any new or remaining medical problems, because it is frequently impossible to recognize and treat all elements of injury or illness in a single Emergency/Outpatient Department visit.

DIAGNOSIS: Dx: acute cervical and lumbar strain; muscle strain
R hip; contusion of jaw

INSTRUCTIONS TO PATIENT:

Use an ice pack to sore area for 1/2 hr every 2 hrs for 24 hrs while awake; after 24 hrs start using a heat pack in same area for 1/2 hr 3-4 times per day. Head injury sheet. Take pain medication as directed. If your jaw is still bothering you tomorrow call Dr. and arrange for a recheck. If not well after one week with your neck or back call Dr. and arrange for a recheck.

I understand the instructions given me.

IMPORTANT INFORMATION

1. **[REDACTED] Insurance Information**

Emergency Department Physician's Charges

3. Radiology Charges

The examination and treatment you have received in the Emergency/Outpatient Department has been rendered on an emergency basis only, and is not intended to be a substitute for complete continuing medical care. Your records and test reports will be available to your personal physician or the local physician on call at the time you were seen. It is important that you report to this physician any new or remaining medical problems, because it is frequently impossible to recognize and treat all elements of injury or illness in a single Emergency/Outpatient Department visit.

INSTRUCTIONS TO PATIENTS:

WASH abrasion twice daily and apply Neosporin;
leave open to air if able to tolerate it; take Tylenol every 4
hrs for pain. Head injury sheet. Recheck in the ER or with the
health department pediatrician if any problems.

I certify that I understand the instructions given me.

EXCLUSION OF WARRANTIES

Any warranties on the parts and accessories sold hereby are made by the manufacturer. The undersigned purchaser understands and agrees that dealer makes no warranties of any kind, express or implied, and disclaims all warranties, including warranties of merchantability or fitness for a particular purpose, with regard to the parts and/or accessories purchased; and that in no event shall dealer be liable for incidental or consequential damages or commercial losses arising out of such purchases. The undersigned purchaser further agrees that the warranties excluded by dealer, include, but are not limited to any warranties that such parts and/or accessories are of merchantable quality or that they will enable any vehicle or any of its systems to perform with reasonable safety, efficiency, or comfort.

AUTHORIZATION FOR REPAIRS

I hereby authorize the repair work herein set forth to be done along with the necessary material and agree that you are not responsible for loss or damage to vehicle or articles left in vehicle in case of fire, theft or any other cause beyond your control or for any delays caused by unavailability of parts or delays in parts shipments by the supplier or transporter. I hereby grant you and/or your employees permission to operate the vehicle herein described on streets, highways or elsewhere for the purpose of testing and/or inspection. An express mechanic's lien is hereby acknowledged on above vehicle to secure the amount of repairs thereto. The dealership is not responsible for damages from freezing due to lack of antifreeze.

Mr. [REDACTED]
U.S. Department of Transportation
National Highway Transportation Safety Administration
[REDACTED]
[REDACTED]
Washington, D. C. [REDACTED]

Reference Number:

Mr. [REDACTED]

I am responding to your request on behalf of my wife, [REDACTED] She had talked to you on [REDACTED] about her accident.

We are concerned as to why the driver's air bag on our car did not deploy upon impact and the passenger's air bag did deploy. [REDACTED] finds a great deal of comfort finding a professional that is interested in the fact a product she purchased for it's safety features and placed so much trust in failed at the very time it was designed to function properly. It seems all the 'laymen' we've talked to are positive that something should be done, yet all the 'professionals' (lawyers) want to try and ignore it or play it down. It seems it would take her death to make this incident noticeable.

SOME INFORMATION REGARDING THE AIR BAG SYSTEM. THE TEST WARNING LIGHT FOR THE 'SRS' CAME ON EVERY TIME THE CAR WAS STARTED AND AFTER A COUPLE OF SECONDS IT WOULD GO OUT. TO MY UNDERSTANDING, THE CAR'S DIAGNOSTICS WAS TELLING US THAT THE 'SRS' WAS IN PROPER OPERATING ORDER. WE HAVE NEVER SEEN THE LIGHT COME ON AND STAY ON OR NOT COME ON AT ALL. I CAN ASSURE YOU, THAT PARTICULAR INDICATOR LIGHT WAS OF GREAT INTEREST TO MY WIFE. SHE IS A VERY SAFETY CONSCIOUS INDIVIDUAL.

I want to thank you for responding and your concern. It has taken a great deal of the anxiety and pressure off of [REDACTED] She feels more assured that something positive will come of this very unfortunate situation.

I have enclosed the items you requested. If there is any other information that we can provide to you, certainly call us.

Respectfully,

encs: (1) PHOTOS
(2) ACCIDENT REPORT
(3) EMERGENCY ROOM REPORTS
(4) AUTOMOBILE INFORMATION
(5) PREVIOUS REPAIR WORK

MR. [REDACTED]

I MARKED THE BACK OF THE PHOTOS TO MATCH THE SET I HAVE HERE. EACH PHOTO WAS TAKEN FOR A SPECIFIC REASON, BUT IT MAY NOT BE APPARENT. I WILL CERTAINLY BE AVAILABLE TO ASSIST YOU IN ANY WAY.

T

VEHICLE APPLICATION

Lincoln Town Car, Ford Crown Victoria/Mercury Grand Marquis.

DESCRIPTION

The Supplemental Air Bag Restraint System (SRS) is designed to provide increased accident protection for front seat occupants IN ADDITION TO that provided by the three point safety belt system. Safety belt use is necessary to obtain the best occupant protection and to receive the full advantages of the supplemental air bag. **FORD RECOMMENDS THE USE OF SAFETY BELT SYSTEMS FOR ALL VEHICLE OCCUPANTS.**

Refer to Section 41-50 for information on the Safety Belt Restraint System.

DESCRIPTION (Continued)

The Supplemental Air Bag Restraint System consists of two basic subsystems:

- The driver and passenger air bags.
- The electrical system; including impact sensors, electronic diagnostic monitor and a backup power supply.

R6563-A

Driver Air Bag

The driver air bag is mounted in the center of the steering wheel. The module consists of:

- Inflator.
- Mounting plate and retainer ring.
- Bag assembly.
- Steering wheel trim cover.

NOTE: The driver air bag is serviced as a complete assembly.

Inflator

The inflator assembly is not a serviceable item. When the sensors close, signalling a crash, battery power flows to the air bag inflator. Inside the inflator, an igniter converts the electrical signal to thermal (heat) energy, causing the ignition of the inflator gas

generant. This ignition reaction combusts the sodium azide/copper oxide gas generant in the inflator, producing nitrogen gas, which inflates the air bag.

Driver Air Bag

The air bag is constructed of neoprene coated nylon, is 28 inches in diameter and fills to a volume of about 2.3 cubic feet in approximately 40 milliseconds. It is not a serviceable item.

Mounting Plate and Retainer Ring

The mounting plate and retainer ring attach and seal the bag assembly to the inflator. The mounting plate is also used to attach the trim cover and to mount the entire module to the wheel. These items are components of the air bag module and cannot be serviced.

DESCRIPTION (Continued)

Steering Wheel Trim Cover

When the air bag is activated, tear seams moulded into the steering wheel trim cover separate to allow inflation of the bag. The cover is a component of the air bag module and is not serviceable.

**Passenger Air Bag****Lincoln Town Car**

The passenger air bag is mounted in the RH position of the instrument panel above the glove compartment. The Air Bag consists of the following components:

- Inflator.
- Reaction housing with mounting hardware.
- Bag assembly.
- Trim cover.

NOTE: The passenger air bag is serviced as a complete assembly.

Inflator

The passenger air bag inflator is not a serviceable item. As with the driver air bag, an igniter inside the inflator converts to battery power to thermal (heat) energy, causing ignition of the gas generant. The ignition reaction causes combustion of the sodium ozide/iron oxide gas generant producing nitrogen to fill the bag. Since the passenger air bag is much larger than the driver air bag, it contains more gas generant in a different inflator configuration to produce more nitrogen gas.

Passenger Air Bag Assembly

The passenger air bag is constructed of ripstop nylon. The bag fills to a volume of approximately 8 cubic feet. It is not a serviceable item.

Reaction Housing

The steel housing supplies support for the inflator, a reaction surface for the air bag, and is used to attach the trim cover. It contains mounting brackets that attach the air bag to the instrument panel, and is not a serviceable item.

Trim Cover

The thermo-plastic trim cover is textured and painted to match the surface of the instrument panel. It is constructed with a moulded-in tear seam that separates when the air bag inflates, and hinges out of the way during deployment. Its main function is to retain the air bag in the reaction housing during vehicle operation, and is not a serviceable item.

**Diagnostic Monitor**

The diagnostic monitor contains a microcomputer that monitors the electrical system components and connections. The monitor performs a self-check of the microcomputer internal circuits and energizes the system readiness indicator lamp during prove out and whenever a fault occurs. System electrical faults can be detected and translated into different coded lamp displays. If certain faults occur, the system will be disarmed by a firing disarm device built into the monitor. If a system fault exists and the lamp is malfunctioning, an audible tone will be heard indicating the need for service.

System Readiness Indicator Lamp

The system readiness indicator, located in the left pad of the electronic instrument cluster will light for approximately six seconds whenever the ignition switch is turned from OFF to RUN if the air bag is working properly. If air bag system faults are found, the lamp will either fail to light, stay on continuously, or light in a flashing mode (if a system fault exists and the lamp is malfunctioning an audible tone will be heard indicating the need for service). If a fault occurs after the prove out the lamp will light either continuously or in a coded flashing mode.

DESCRIPTION (Continued)

Tone Generator

The air bag readiness lamp is the prime means of determining the air bag system condition. However, a series of five sets of five tones will be heard if the readiness lamp is out and a fault occurs in the system. This also means that the Supplemental Air

Lincoln Town Car

Bag System is in need of service. The tone pattern will repeat periodically until the fault and lamp outage are serviced. Unless serviced, the Supplemental Air Bag Restraint System may not function properly in the event of an accident.

R6553-A

Electrical System

The air bag system is powered directly from the battery. The system can function with the ignition switch in any position, including OFF and LOCK. The system can also function when the driver or passenger seats are unoccupied. The electrical system performs three main functions:

- Detects an impact.
- Switches electric power to the air bags.
- Monitors the system to determine readiness.

The electrical system components include:

- Diagnostic monitor.
- Air bag system readiness indicator.
- Wiring harness.
- Sensors.
- The igniter within the driver and passenger air bags.
- Backup power supply.

Sensors

The sensor is an electrical switch which reacts to impacts according to direction and force. It discriminates between impacts that require air bag inflation and impacts that do not require air bag inflation. When an impact occurs that requires air bag inflation, the sensor contacts close, completing the electrical circuit necessary for system operation.

R6555-A

DESCRIPTION (Continued)

Five sensors are mounted in the vehicle. Their locations are as follows:

- A dual crash and safing sensor at the hood latch support.
- A crash sensor at the RH fender apron.
- A crash sensor at the LH fender apron.
- A safing sensor at the LH cowl side in the passenger compartment.

At least two sensors, one safing, one front, must be activated to inflate the air bag.

AIR BAG FIRING CIRCUIT DIAGRAM

Backup Power Supply

A backup power supply is included in the system to provide air bag deployment if the battery or battery cables are damaged in an accident before the crash sensors close. The power supply is a capacitor that will discharge approximately 15 minutes after the battery is disconnected. It is located in the instrument panel and is combined with the diagnostic monitor.

WARNING: THE BACKUP POWER SUPPLY MUST BE DISCONNECTED BEFORE ANY AIR BAG COMPONENT SERVICE IS PERFORMED.

PARTS REPLACEMENT

The various major assemblies in the air bag system have been designed to be tamper-resistant and are not intended to be disassembled for service. Component assemblies may be removed and replaced as required. Information on proper handling, storage, and disposal of the air bag inflator assemblies is provided in this Section. Refer to Removal and Installation. Warning labels for the air bag are shown.

Igniter Assembly

Refer to Air Bag Module for description

Repair of Air Bag Equipped Vehicles Involved in Accidents

While repairing an air bag equipped vehicle that has been involved in an accident, check sensors and wiring.

Vehicle sensor orientation is critical for proper system operation. If a vehicle equipped with an air bag system is involved in a crash where the fenders or grille area have been damaged, inspect the sensor mounting brackets for damage. If damaged, the sensor should be replaced whether or not the air bag is deployed. In addition, ensure that body structure in the area of the sensor mounting is restored to its original condition.

Inspect the sensor wiring and the wiring harness for any damage that may have occurred due to the accident. Repair or replace any damaged wiring, terminals, insulation or connectors as required. If splices are required in adjacent wiring, the splices should be staggered 50mm (2 inches) from each other. Repair as follows:

A waterproof butt splice connector should be used on all wiring repairs in the engine compartment. A heat shrink nylon splice prevents water, salt, condensation and heat from affecting the wiring repair.

The inner wall of the splice connector is lined with an adhesive that melts when heated with a heat gun and flows under pressure from the tubing, sealing the splice. The connectors can be crimped with a standard insulated connector crimping tool. The splices are color coded for gauge identification, and are transparent to allow inspection of the finished splice.

INSTALLATION INSTRUCTIONS

1. STRIP WIRES 7.6mm (0.3")
INSERT INTO CRIMP BARREL

2. CRIMP USING CRIMP TOOL FOR
PREINSULATED CRIMPS.

3. HEAT SPLICE WITH HEAT GUN UNTIL
TUBING SHRINKS AND ADHESIVE
FLOWS FROM EACH END.

R6710-A

Part Number	Part Name	Class
E6FZ-14488-A	Butt Connector Gauge: 18-22, Color: Red	C
E6FZ-14488-B	Butt Connector Gauge: 14-16, Color: Blue	C
E6FZ-14488-C	Butt Connector Gauge: 10-12, Color: Yellow	C

CR6720-A

If the accident involved air bag deployment, the steering column may have been loaded sufficiently to deform steering column mounting brackets or damage column wiring.

An inspection should be made of the column structure and clockspring wiring to ensure that any damaged components are replaced. Refer to Section 13-04.

After all service, **verify the air bag lamp.** This means turn the ignition switch to RUN and count the flashes only after the code (series of flashes) has cycled twice. If the air bag lamp comes on continuously for 4 to 8 seconds and then goes out, the system is functioning properly and all faults have been replaced. Refer to Diagnosis and Testing.

PARTS REPLACEMENT (Continued)

ON DRIVER AIR BAG

WARNING

This restraint module cannot be repaired. Use Ford published diagnostic instructions to determine if the unit is defective. If defective, replace and dispose of the entire unit as directed in instructions. Under no circumstances should diagnosis be performed using electrically powered test equipment or probing devices. Tampering or mishandling can result in personal injury. For special handling instructions, refer to the Ford Air Bag Shop Manual.

AVERTISSEMENT

On ne répare ce dispositif de sécurité. Des directives de diagnostic publiées par Ford vous permettront de déterminer si le dispositif est défectueux/S'il est défectueux, le remplacer et suivre les directives de mise au rebut du dispositif complet. On ne doit en aucun cas tester ce dispositif à l'aide d'appareils électriques ou de sondes. Toute altération ou manipulation induite pourrait causer des blessures. Le manuel technique Ford sur les coussins de sécurité donne des instructions spéciales de manipulation.

ON BACK OF VISORS

SERVICE PRECAUTIONS

WARNING: SAFE HANDLING OF AIR BAGS REQUIRE FOLLOWING THE PROCEDURES DESCRIBED BELOW FOR BOTH LIVE AND DEPLOYED AIR BAGS.

ALWAYS WEAR SAFETY GLASSES WHEN SERVICING AN AIR BAG VEHICLE, AND WHEN HANDLING AN AIR BAG.

Live Air Bags

WHEN CARRYING A LIVE AIR BAG, MAKE SURE THE BAG AND TRIM COVER ARE POINTED AWAY FROM YOUR BODY. IN THE UNLIKELY EVENT OF AN ACCIDENTAL DEPLOYMENT, THE BAG WILL THEN DEPLOY WITH MINIMAL CHANCE OF INJURY. IN ADDITION, WHEN PLACING A LIVE AIR BAG ON A BENCH OR OTHER SURFACE, ALWAYS FACE THE BAG AND TRIM COVER UP, AWAY FROM THE SURFACE. THIS WILL REDUCE THE MOTION OF THE AIR BAG IF IT IS ACCIDENTALLY DEPLOYED.

Deployed Air Bags

SAFETY PRECAUTIONS MUST ALSO BE OBSERVED WHEN HANDLING A DEPLOYED AIR BAG. AFTER DEPLOYMENT, THE AIR BAG SURFACE MAY CONTAIN DEPOSITS OF SODIUM HYDROXIDE, A PRODUCT OF THE GAS GENERANT COMBUSTION THAT IS IRRITATING TO THE SKIN. ALWAYS WEAR GLOVES AND SAFETY GLASSES WHEN HANDLING A DEPLOYED AIR BAG, AND WASH YOUR HANDS WITH MILD SOAP AND WATER AFTERWARDS.

General Instructions

BECAUSE OF THE CRITICAL OPERATING REQUIREMENTS OF THE SYSTEM, DO NOT ATTEMPT TO SERVICE SENSORS, THE CLOCKSPRING, THE MONITOR, THE BACKUP POWER SUPPLY OR THE AIR BAG. CORRECTIONS ARE MADE BY REPLACEMENT ONLY.

NOTE: IF A PART IS REPLACED AND THE NEW PART DOES NOT CORRECT THE PROBLEM, INSTALL THE ORIGINAL PART AND PERFORM THE DIAGNOSTIC PROCEDURE AGAIN.

NEVER PROBE THE CONNECTORS ON THE AIR BAGS. DOING SO MAY RESULT IN AIR BAG DEPLOYMENT WHICH COULD RESULT IN PERSONAL INJURY.

ALL COMPONENT REPLACEMENTS AND WIRING REPAIRS MUST BE MADE WITH THE BATTERY GROUND AND THE BACKUP POWER SUPPLY DISCONNECTED.

THE INSTRUCTION "DISCONNECT" ALWAYS REFERS TO A CONNECTOR. NEVER DETACH A COMPONENT FROM THE VEHICLE WHEN INSTRUCTED TO "DISCONNECT."

VEHICLE SENSOR ORIENTATION IS CRITICAL FOR PROPER SYSTEM OPERATION. IF A VEHICLE EQUIPPED WITH AN AIR BAG SYSTEM IS INVOLVED IN A CRASH WHERE THE FENDERS OR GRILLE AREA HAVE BEEN DAMAGED, INSPECT THE SENSOR MOUNTING BRACKETS FOR DEFORMATION. IF DAMAGED, THE SENSOR SHOULD BE REPLACED, WHETHER OR NOT THE AIR BAG IS DEPLOYED. IN ADDITION, ENSURE THAT BODY STRUCTURE IN THE AREA OF SENSOR MOUNTING IS RESTORED TO ITS ORIGINAL CONSTRUCTION.

To Deactivate System:

NOTE: Follow Steps 1,2,3,4 and 8 for driver air bags. For passenger air bag (Lincoln Town Car) follow Steps 1,5,6,7 and 8.

1. Disconnect battery ground cable and backup power supply.
2. Remove four nut and washer assemblies securing driver air bag module to steering wheel.
3. Disconnect driver air bag module connector.
4. Attach jumper wire to air bag terminals on clockspring assembly.

**DRIVER AIR BAG
CLOCKSPRING CONNECTOR**

5. Open glove compartment and rotate all the way down, past the stops.
6. Disconnect passenger air bag connector (Lincoln Town Car).
7. Attach jumper wire to air bag terminals on the wiring harness side.

**PASSENGER AIR BAG
WIRING CONNECTOR**

SERVICE PRECAUTIONS (Continued)

**To Reactivate System:**

1. Disconnect battery ground cable and backup power supply.
2. Remove jumper wire from air bag terminals on clockspring assembly, if connected.
3. Reconnect driver air bag connector.
4. Position driver air bag on steering wheel and secure with four nut and washer assemblies (10mm). Tighten nut and washer assemblies to 4-6 N·m (35-53 lb-in).
5. Remove jumper wire from air bag terminals on passenger air bag wiring connector in harness (Lincoln Town Car).
6. Reconnect passenger air bag connector (Lincoln Town Car).
7. Close glove compartment door (Lincoln Town Car).
8. Connect backup power supply and battery ground cable.
9. Verify air bag lamp.

REMOVAL AND INSTALLATION**Sensor—Front Center****Removal**

WARNING: THE ELECTRICAL CIRCUIT NECESSARY FOR SYSTEM DEPLOYMENT IS POWERED DIRECTLY FROM THE BATTERY AND BACKUP POWER SUPPLY. TO AVOID ACCIDENTAL DEPLOYMENT AND POSSIBLE PERSONAL INJURY, THE BATTERY GROUND CABLE AND BACKUP POWER SUPPLY MUST BE DISCONNECTED PRIOR TO SERVICING OR REPLACING ANY SYSTEM COMPONENTS.

1. Disconnect battery ground cable and backup power supply.
2. Disconnect center front sensor electrical connector and wiring retainer.
3. Remove screws attaching front sensor to radiator support. Remove sensor from vehicle.

Lincoln Town Car**Ford Crown Victoria/Mercury Grand Marquis****Installation**

1. Position front center sensor with arrow on top pointing toward front of vehicle and secure to radiator support with retaining screws. Tighten vertical retaining screw (two on Ford Crown Victoria/Mercury Grand Marquis) to 4-5 N·m (35-50 lb-in), and horizontal retaining screws (Lincoln Town Car) to 4-6 N·m (39-53 lb-in).

REMOVAL AND INSTALLATION (Continued)

2. Connect front center sensor wire lead connector to wiring assembly connector and install wiring retainer.
3. Connect backup power supply and battery ground cable.
4. Verify air bag indicator lamp.

Sensor—RH Front**Removal**

WARNING: THE ELECTRICAL CIRCUIT NECESSARY FOR SYSTEM DEPLOYMENT IS POWERED DIRECTLY FROM THE BATTERY AND BACKUP POWER SUPPLY. TO AVOID ACCIDENTAL DEPLOYMENT AND POSSIBLE PERSONAL INJURY, THE BATTERY GROUND CABLE AND BACKUP POWER SUPPLY MUST BE DISCONNECTED PRIOR TO SERVICING OR REPLACING ANY SYSTEM COMPONENTS.

1. Disconnect battery ground cable and backup power supply.
2. Remove battery.
3. Disconnect RH front sensor electrical connector and wiring retainer.
4. Remove two screws retaining RH front sensor to RH fender apron and remove sensor.

Lincoln Town Car

R6557-A

Ford Crown Victoria/Mercury Grand Marquis

R6741-A

Installation

1. Position RH front sensor and wire lead in vehicle and secure sensor to RH fender apron with retaining screws. Tighten screws to 4-5 N·m (35-44 lb-in).
2. Connect RH front sensor wire lead connector to wiring assembly connector and secure wiring retainer.
3. Install battery.
4. Connect backup power supply and battery ground cable.
5. Verify air bag indicator lamp.

Sensor—LH Front**Removal**

WARNING: THE ELECTRICAL CIRCUIT NECESSARY FOR SYSTEM DEPLOYMENT IS POWERED DIRECTLY FROM THE BATTERY AND BACKUP POWER SUPPLY. TO AVOID ACCIDENTAL DEPLOYMENT AND POSSIBLE PERSONAL INJURY, THE BATTERY GROUND CABLE AND BACKUP POWER SUPPLY MUST BE DISCONNECTED PRIOR TO SERVICING OR REPLACING ANY SYSTEM COMPONENTS.

1. Disconnect battery ground cable and backup power supply.
2. Remove washer fluid reservoir.
3. Disconnect LH front sensor electrical connector and wiring retainer.
4. Remove screws retaining LH front sensor to LH fender apron and remove sensor from vehicle.

REMOVAL AND INSTALLATION (Continued)

Installation

1. Position LH sensor to LH fender apron and secure with retaining screws. Tighten screws to 4-5 N·m (35-44 lb-in).
2. Connect LH front sensor electrical wiring connector to wiring assembly connector and secure wiring retainer.
3. Install washer fluid reservoir.
4. Connect backup power supply and battery ground cable.
5. Verify air bag indicator lamp.

Installation

1. Position sensor to cowl side panel.
2. Secure sensor with two screws. Tighten to 4-6 N·m (35-53 lb-in).
3. Connect rear sensor wiring connector to wiring assembly connector.
4. Install connector bracket.
5. Install cowl side trim panel.
6. Connect backup power supply and battery ground cable.
7. Verify air bag indicator lamp.

Sensor—Rear

Removal

WARNING: THE ELECTRICAL CIRCUIT NECESSARY FOR SYSTEM DEPLOYMENT IS POWERED DIRECTLY FROM THE BATTERY AND BACKUP POWER SUPPLY. TO AVOID ACCIDENTAL DEPLOYMENT AND POSSIBLE PERSONAL INJURY, THE BATTERY GROUND CABLE AND BACKUP POWER SUPPLY MUST BE DISCONNECTED PRIOR TO SERVICING OR REPLACING ANY SYSTEM COMPONENTS.

1. Disconnect battery ground cable and backup power supply.
2. Remove LH cowl side trim panel. Refer to Section 45-03.
3. Remove connector bracket.
4. Disconnect rear sensor wiring connector from wiring assembly connector.
5. Remove two screws attaching rear sensor to LH cowl side panel and remove sensor.

Diagnostic Monitor

Removal

WARNING: THE ELECTRICAL CIRCUIT NECESSARY FOR SYSTEM DEPLOYMENT IS POWERED DIRECTLY FROM THE BATTERY AND BACKUP POWER SUPPLY. TO AVOID ACCIDENTAL DEPLOYMENT AND POSSIBLE PERSONAL INJURY, THE BATTERY GROUND CABLE AND BACKUP POWER SUPPLY MUST BE DISCONNECTED PRIOR TO SERVICING OR REPLACING ANY SYSTEM COMPONENTS.

1. Disconnect battery ground cable and backup power supply.
2. Remove headlamp switch knob and retaining nut.
3. Remove LH and RH instrument panel mouldings.
4. Remove 12 upper and lower instrument panel finish panel retaining screws and finish panel.
5. Remove two bolts attaching steering column opening cover and pad assembly to instrument panel and remove cover.
6. Remove two screws and pushpin retaining instrument panel insulator and remove insulator.
7. Disconnect diagnostic monitor electrical wiring connectors.
8. Remove two screws attaching diagnostic monitor and bracket assembly and remove assembly.
9. Remove screws attaching monitor to bracket.

REMOVAL AND INSTALLATION (Continued)

R6560-A

Installation

1. Position diagnostic monitor to bracket and install retaining screws.
2. Position diagnostic monitor and bracket assembly on instrument panel and install retaining screws.
3. Connect electrical wiring connectors to the diagnostic monitor and backup power supply.
4. Position insulator assembly on instrument panel and install two screws and push rivet. Tighten screws to 1.5-3 N·m (13-27 lb-in).
5. Position steering column opening cover and pad assembly on instrument panel. Install five retaining screws. Tighten to 9-14 N·m (6-10 lb-ft).
6. Install instrument panel finish panel and retaining screws.
7. Install instrument panel mouldings.
8. Install headlamp switch, retaining nut and knob.
9. Connect battery ground cable.
10. Verify air bag indicator lamp.

Backup Power Supply**Removal**

WARNING: THE ELECTRICAL CIRCUIT NECESSARY FOR SYSTEM DEPLOYMENT IS POWERED DIRECTLY FROM THE BATTERY AND BACKUP POWER SUPPLY. TO AVOID ACCIDENTAL DEPLOYMENT AND POSSIBLE PERSONAL INJURY, THE BATTERY GROUND CABLE AND BACKUP POWER SUPPLY MUST BE DISCONNECTED PRIOR TO SERVICING OR REPLACING ANY SYSTEM COMPONENTS.

1. Disconnect battery ground cable and backup power supply.
2. Remove headlamp switch knob and retaining nut.
3. Remove LH and RH instrument panel mouldings.
4. Remove 12 upper and lower instrument panel finish panel retaining screws and finish panel.
5. Remove two bolts attaching steering column opening cover and pad assembly to instrument panel and remove cover.

REMOVAL AND INSTALLATION (Continued)

6. Remove two screws and pushpin retaining instrument panel insulator and remove insulator.
7. Disconnect diagnostic monitor backup power supply electrical wiring connector, mounted to the EEC module bracket.
8. Remove screws attaching EEC module bracket assembly and remove assembly.
9. Remove power supply by depressing retaining tabs to bracket.

Installation

1. Position power supply to bracket and install.
2. Position bracket assembly on instrument panel and install retaining screws.
3. Connect electrical wiring connectors to the power supply.
4. Position insulator assembly on instrument panel and install two screws and push rivet. Tighten screws to 1.5-3 N·m (13-27 lb-in).
5. Position steering column opening cover and pad assembly on instrument panel. Install five retaining screws. Tighten to 9-14 N·m (6-10 lb-ft).
6. Install instrument panel finish panel and retaining screws.
7. Install instrument panel mouldings.
8. Install headlamp switch, retaining nut and knob.
9. Connect battery ground cable.
10. Verify air bag indicator lamp.

Air Bag Clockspring

Refer to Section 13-04.

Driver Air Bag**Removal**

WARNING: THE ELECTRICAL CIRCUIT NECESSARY FOR SYSTEM DEPLOYMENT IS POWERED DIRECTLY FROM THE BATTERY AND BACKUP POWER SUPPLY. TO AVOID ACCIDENTAL DEPLOYMENT AND POSSIBLE PERSONAL INJURY, THE BATTERY GROUND CABLE AND BACKUP POWER SUPPLY MUST BE DISCONNECTED PRIOR TO SERVICING OR REPLACING ANY SYSTEM COMPONENTS.

1. Disconnect battery ground cable and backup power supply.
2. Remove four nut and washer assemblies retaining air bag module to steering wheel.

3. Disconnect the air bag electrical connector from clockspring connector. Remove air bag assembly.

WARNING: PLACE AIR BAG MODULE ON BENCH WITH TRIM COVER FACING UP.

Installation

1. Connect air bag module wiring connector to clockspring connector.
2. Position air bag module to steering wheel and secure with four nut and washer assemblies. Tighten to 4-6 N·m (35-53 lb-in).
3. Connect backup power supply and battery ground cable.
4. Verify air bag indicator lamp.

REMOVAL AND INSTALLATION (Continued)

Passenger Air Bag

Lincoln Town Car

Removal

WARNING: THE ELECTRICAL CIRCUIT NECESSARY FOR SYSTEM DEPLOYMENT IS POWERED DIRECTLY FROM THE BATTERY AND BACKUP POWER SUPPLY. TO AVOID ACCIDENTAL DEPLOYMENT AND POSSIBLE PERSONAL INJURY, THE BATTERY GROUND CABLE AND BACKUP POWER SUPPLY MUST BE DISCONNECTED PRIOR TO SERVICING OR REPLACING ANY SYSTEM COMPONENTS.

1. Disconnect battery ground cable and backup power supply.
2. Remove RH instrument panel.
3. Remove instrument panel finish panel retaining screws and remove panel.
4. Open glove compartment, press sides inward and lower glove compartment to floor.
5. Through glove compartment opening, remove two air bag module retaining screws.
6. Remove four remaining air bag module retaining screws, disconnect electrical connector and remove module.

WARNING: PLACE AIR BAG MODULE ON BENCH WITH TRIM COVER FACING UP.

Installation

1. Connect electrical connector to air bag module and position module in instrument panel.
2. Install four upper retaining screws. Tighten to 0.5-1.0 N·m (4-8 lb-in).
3. Install lower module retaining bolts. Tighten to 7-11 N·m (6-8 lb-ft).

4. Return glove compartment to correct position.
5. Install instrument panel finish panel with 12 retaining screws. Tighten upper screws to 9-14 N·m (6-10 lb-ft). Tighten lower screws to 2-4 N·m (17-35 lb-in).
6. Install instrument panel mouldings.
7. Connect backup power supply and negative battery terminal.
8. Verify air bag indicator lamp.

R6561-A

Trim Panel and Steering Column Opening

Removal and Installation

Refer to Section 13-04.

DISPOSAL PROCEDURES

Several situations may arise when some form of disposal action must be undertaken, scrapping a vehicle containing a deployed air bag; scrapping a vehicle with a live air bag, disposal of a live but

electrically inoperative air bag module, and scrapping a deployed module. These situations and the disposal recommendations are shown in the following chart and discussed in detail below.

AIR BAG DISPOSAL RECOMMENDATIONS

Condition	Instructions
1. Vehicle to be Scrapped; Live Air Bags.	Electrically Deploy Using Procedures 1 or 2 as Required.
2. Vehicle to be Scrapped; Deployed Air Bags.	Scrap Vehicle in the Usual Manner.
3. Module Replaced; Damaged but Live Air Bags.	Package and Label Properly. Return to Ford.
Module Replaced; Deployed Air Bags.	Scrap Air Bags in the Usual Manner.

CR6190-A

DISPOSAL PROCEDURES (Continued)

Deployed Air Bags

To service a vehicle in which the air bags have deployed, the deployed driver air bags must be replaced with all new air bags. The deployed air bags can be disposed of in the same manner as any part to be scrapped.

Air Bag Disposal

Procedure 1

Electronic Deployment with Intact Wiring

This procedure is to be used in the event that a vehicle with a live air bag is to be scrapped. Scrappage may be required due to severe damage in a non-air bag deployable accident, or at the end of the vehicle's useful life. This procedure assumes that the air bag wiring remains intact; that is, no fault codes are indicated by the readiness indicator, that the system proves out correctly, and that the vehicle's battery is still in place (or one has been provided). This procedure is to be performed outdoors away from other personnel, since the deploying air bags make a loud report upon actuation.

1. Check and clear the front seat of all loose objects.
2. Do not permit any occupants to remain inside the vehicle.
3. Open the hood and check for an operational vehicle battery. If no battery is found, supply one and connect it in the usual manner.
4. Turn the ignition switch to the RUN position and observe the air bag readiness indicator. If the lamp illuminates for six seconds and then stops, the system is intact and may be deployed. Continue with Procedure 1. If a series of fault codes appears, go to Procedure 2 to deploy the unit.
5. Locate the center air bag sensor at the hood latch support. Locate the connector on the wiring from the sensor.
6. Pull the submersible connector apart and examine the wiring harness end of the connector (not the sensor end). Identify circuits 619 PK/W, 620 P/LB, 611 W/O and 614 GY/O.

Center Air Bag Sensor Connector

Undeployed Air Bag—Inoperative

In the event that an air bag is diagnosed as inoperative, (refer to Diagnostic Procedures), the inoperative air bag must be replaced by a new air bag. The inoperative air bag **CANNOT BE DISPOSED OF IN THE USUAL MANNER**, and must be returned to Ford Motor Company for proper disposal.

Air bags must be packaged and shipped according to the U.S. Department of Transportation regulations. Retain packaging used for replacement air bags, including the labeling. Return air bags according to the instructions provided with replacement air bags.

Scrapped Vehicle

Some vehicles may be damaged or inoperable to the point that service cannot be made, but still contain undeployed air bags. This condition could occur by side or rear impact, or rollover, or if the vehicle is simply past its useful lifetime. **THE AIR BAGS SHOULD BE DEPLOYED PRIOR TO VEHICLE SCRAPPAGE, PER PROCEDURES 1 OR 2 BELOW.**

DISPOSAL PROCEDURES (Continued)

7. Using a 152mm (6 inch) length of bared wire, short the 619 PK/W wire to ground. Again, ensuring there are no occupants in the vehicle, short the 611 W/O and 614 GY/O circuits together with a second bared wire. The air bags should deploy. If the air bags do not deploy, go to Procedure 2.
8. If successful, a loud report will be heard and the bag material will be visible in the center of the steering wheel and above the glove compartment. Allow at least 10 minutes before approaching the air bag to allow for cooling, and dissipation of the effluents.

The air bag(s) is now inoperative and the vehicle may be scrapped in the usual manner.

Procedure 2

Remote Deployment of Air Bags

This procedure is to be used in the event that a vehicle with live air bags is to be scrapped, but the vehicle does not contain an intact wiring harness or certain system components are inoperative. This procedure can also be used if Step 7 of Procedure 1 was unsuccessful.

WARNING: REMOTE DEPLOYMENT IS TO BE PERFORMED OUTDOORS WITH ALL PERSONNEL AT LEAST 20 FEET AWAY TO ENSURE PERSONNEL SAFETY AND DUE TO THE LOUD REPORT WHICH OCCURS WHEN DRIVER AIR BAGS ARE DEPLOYED.

1. Remove the driver and passenger air bags from the vehicle as outlined.
2. Cut the two module connector wires and strip 25mm (1 inch) of insulation from the ends. Obtain two wires at least 20 feet long. Connect one end of each wire to each of the air bag module wires.
3. Place the air bag with the trim cover facing upward on a flat surface in a remote area such as a parking lot or field.

WARNING: DO NOT PLACE THE AIR BAG WITH THE TRIM COVER FACING DOWN, AS THE FORCES OF THE DEPLOYING AIR BAG MAY CAUSE IT TO RICOCHET AND CAUSE PERSONAL INJURY.

4. Remaining at least 20 feet away from the air bag, deploy it by touching the other ends of the two wires to the terminals of a 12 volt vehicle battery.

Loud report will be heard and the bag material will be visible. Allow at least 10 minutes before approaching the air bag to allow for cooling, and dissipation of the effluents.

The air bag(s) is now inoperative and may be scrapped in the usual manner.

DIAGNOSIS AND TESTING

The diagnostic monitor has a coded flashing indicator lamp feature which assists in isolating system malfunctions or faults. The codes are produced by a series of air bag lamp flashes. Each flash is on for about one-half second and off for about one-half second. The number of flashes in each series is based on the type of fault being detected. The code (series of flashes) is repeated when the ignition switch is in the RUN position and a fault exists. The coded fault feature is prioritized so that if two or more different faults occur at the same time, the highest priority fault indication will be shown until corrected.

NOTE: If a system fault exists and the lamp is malfunctioning, an audible tone will be heard indicating the need for service. The tone produced is a series of five sets of five beeps. The number of beeps does not indicate the fault code; it means the lamp is out and a fault is present.

The faults and associated codes are listed in the Fault Code Priorities chart in the order that they are ranked from top to bottom. In other words, the code at the top of the list has the highest priority (or ranking) and would be shown over any other code by the air bag lamp. The code at the bottom of the list has the lowest priority (or ranking). These listings are for information only and should not be used for system diagnosis or troubleshooting. The following diagnostic charts and deactivation procedure should be used to pinpoint the specific fault and to safely diagnose and service the system. However, if after using the diagnostic charts, the fault is not located, proceed to the diagnostic schematic to perform additional diagnostic checks to determine and correct uncommon faults.

"Check Connection" means inspect connector for proper seating to mating connector, inspect terminals for good contact and inspect wiring for proper crimping to terminal.

All continuity checking is done with the system deactivated. This means that the air bags are disconnected and jumper wires are installed.

"Disconnect" does not mean removal.

A disconnected part is not reconnected until specific reconnect instruction is given.

The following test equipment is used:

- Dwell-Tach-Volt-Ohms Tester Rotunda 059-00010 or equivalent.
- Jumper Wires.

NOTE: Attach positive (+) lead to circuit voltage and negative (-) lead to specified ground. (If a Digital Voltmeter is used on circuits 608 and 609 with monitor disconnected, the readout will not indicate the correct voltage).

DIAGNOSIS AND TESTING (Continued)

All resistance checks must be made with the negative lead of the ohmmeter at vehicle ground, not battery ground, unless specifically directed otherwise. Three places are recommended; the metal bracket of starter relay, the ignition lock cylinder on the steering column, or the ground wire from harness under RH side of instrument panel.

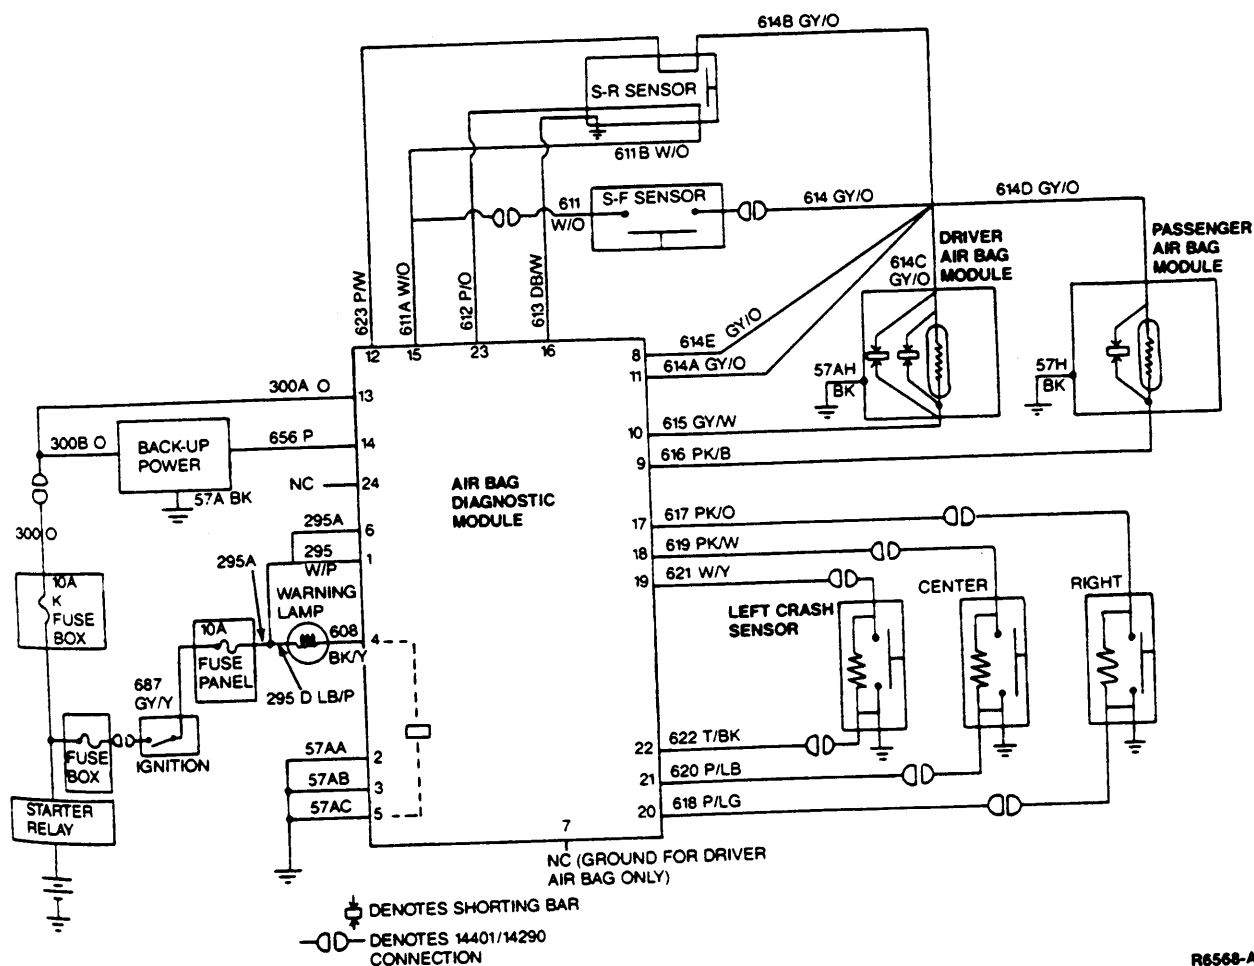

Refer to the Fault Code Priorities Chart, the System Schematic, Connector Illustration and the Diagnosis Charts for Diagnosis and Testing.

VERIFY AIR BAG LAMP means to turn the ignition switch to RUN and count the flashes only after the

code (series of flashes) has cycled twice. If the air bag lamp comes on continuously for four to eight seconds and then goes out, the system is functioning properly and all faults have been serviced.

NOTE: The following Diagnosis and Testing applies to Lincoln Town Car vehicles. Diagnosis and Testing for Ford Crown Victoria/Mercury Grand Marquis vehicles follows Diagnosis and Testing for Lincoln Town Car.

Air Bag System Schematic Lincoln Town Car

R6568-A

DIAGNOSIS AND TESTING (Continued)**FAULT CODE PRIORITIES**

Number of Flashes	Probable Fault
No Lamp	Inoperative air bag indicator lamp circuit
Continuous Lamp	Faulty monitor or disconnected or loose monitors
3	Loss of air bag deployment circuit power. Backup power supply disconnected
5	Shorted forward impact sensor deployment circuit or potential short in air bag deployment circuit
10	Faulty firing circuit disarm device
4	Potential short in air bag deployment circuit. Must use Diagnosis Guide No. 4 for diagnosis
6	Driver air bag circuit inoperative
7	Passenger air bag circuit inoperative
8	Forward impact sensor improperly attached or grounded
9	Open forward impact sensor deployment circuit
2	All forward impact sensors disconnect

Probable Fault — Loss of Air Bag Circuit Deployment Power
and/or Backup Power Supply Disconnected

TEST STEP		RESULT	ACTION TO TAKE
3.4	CHECK RESISTANCE IN CIRCUIT 611 (W/O)		
<ul style="list-style-type: none"> Using an ohmmeter find resistance in Pin 15 Circuit 611 (W/O) on diagnostic monitor wiring connector and to ground. Is resistance less than 1 ohm? 		No	REPLACE diagnostic monitor. RECONNECT system. VERIFY Air Bag lamp. REACTIVATE system.
		Yes	GO to 3.5.
3.5	CHECK RESISTANCE IN CIRCUIT 611 (W/O) — CONTINUED		
<ul style="list-style-type: none"> Disconnect rear safing sensor. Attach ohmmeter to Pin 15 (Circuit 611, W/O) on diagnostic monitor wiring connector and to ground. Is resistance less than 1 ohm? 		No	GO to 3.7.
		Yes	GO to 3.6.
3.6	CHECK RESISTANCE IN CIRCUIT 611 (W/O) — CONTINUED		
<ul style="list-style-type: none"> Disconnect center front sensor. Attach ohmmeter to Pin 15 (611 W/O) on diagnostic monitor wiring connector and to ground. Is resistance less than 1 ohm? 		No	REPLACE center front sensor. REPLACE diagnostic monitor. RECONNECT system. VERIFY Air Bag lamp. REACTIVATE system.
		Yes	TRACE Circuit 611 (W/O) to find contact to ground and SERVICE. REPLACE diagnostic monitor. RECONNECT system. VERIFY Air Bag lamp. REACTIVATE system.

DIAGNOSIS AND TESTING (Continued)

Fault Indication — Air Bag Lamp Flashes Three Times
Probable Fault — Loss of Air Bag Circuit Deployment Power
and/or Backup Power Supply Disconnected

TEST STEP	RESULT	ACTION TO TAKE
3.7 CHECK RESISTANCE IN CIRCUIT 612 (P/O)		
<ul style="list-style-type: none"> ● Attach ohmmeter to Circuit 612 (P/O) on rear safing sensor wiring connector and to ground. ● Is resistance less than 1 ohm? <div data-bbox="264 705 727 989"> <p>REAR SAFING SENSOR CONNECTOR</p> </div> <div data-bbox="282 1199 721 1381"> <p>REAR SAFING SENSOR HARNESS CONNECTOR</p> </div>	<p>No</p> <p>Yes</p>	<p>▶ REPLACE rear safing sensor. REPLACE diagnostic monitor. RECONNECT system. VERIFY Air Bag lamp. REACTIVATE system.</p> <p>▶ TRACE Circuit 612 (P/O) to find contact to ground and SERVICE. REPLACE diagnostic monitor. RECONNECT system. VERIFY Air Bag lamp. REACTIVATE system.</p>

DIAGNOSIS AND TESTING (Continued)

Fault Indication — Air Bag Lamp Flashes Four Times

Probable Fault — Potential Short in Air Bag Deployment Circuit

TEST STEP		RESULT	ACTION TO TAKE
4.0	DURING SYSTEM PROVE-OUT AIR BAG LAMP PROVIDES A FAULT INDICATION OF 4 FLASHES		
4.1	CHECK REAR SAFING SENSOR GROUND		
	<ul style="list-style-type: none"> Deactivate system. Place jumper wire on dash panel sensor Circuit 613 (DBW) and to ground. Verify lamp. Does Air Bag lamp flash code 4? 	Yes	GO to 4.4.
		No	GO to 4.2.
4.2	CONTINUE REAR SAFING SENSOR CHECK		
	<ul style="list-style-type: none"> Remove jumper wire. Loosen and tighten rear safing sensor attaching screws. Turn ignition switch to RUN. Does Air Bag lamp flash code 4? 	Yes	GO to 4.3.
		No	VERIFY air bag lamp.
4.3	CHECK SAFING SENSOR GROUND CIRCUIT		
	<ul style="list-style-type: none"> Turn ignition switch to OFF. Disconnect rear safing sensor wiring connector. Attach ohmmeter to Circuit 613 (DBW) in sensor connector and to ground. Is resistance less than one ohm? 	Yes	INSPECT connector terminals and wires and SERVICE as required. REACTIVATE system. VERIFY Air Bag lamp.
		No	REPLACE rear safing sensor. REACTIVATE system. VERIFY Air Bag lamp.
4.4	CHECK 611 CIRCUIT IN CENTER FRONT SENSOR		
	<ul style="list-style-type: none"> Remove jumper wire. Disconnect center front sensor. Verify lamp. Does lamp flash code 4? 	Yes	GO to 4.5.
		No	REPLACE center front sensor. RECONNECT system. VERIFY lamp. REACTIVATE system. VERIFY lamp.
4.5	CONTINUE CIRCUIT 611 CHECK		
	<ul style="list-style-type: none"> Check resistance between Circuit 611 (Pin 15) and 612 (Pin 23) at the back of the diagnostic monitor connector. Is resistance less than one ohm? 	Yes	GO to 4.7.
		No	GO to 4.6.

DIAGNOSIS AND TESTING (Continued)

Fault Indication — Air Bag Lamp Flashes Four Times

Probable Fault — Potential Short in Air Bag Deployment Circuit

TEST STEP		RESULT	ACTION TO TAKE
4.6	CHECK 611 IN REAR SAFING SENSOR		
<ul style="list-style-type: none"> • Disconnect rear safing sensor. • Check resistance between Circuits 611 (W/O) and 612 (P/O). • Is resistance less than one ohm? 		Yes	TRACE Circuits 611 and 612 back to diagnostic monitor for open circuit and SERVICE (check connectors and terminals to confirm proper connections). If no open circuit exists, REPLACE diagnostic monitor. RECONNECT system. REACTIVATE system. VERIFY Air Bag lamp.
		No	REPLACE rear safing sensor. RECONNECT system. REACTIVATE system. VERIFY Air Bag lamp.
4.7	CHECK FOR REAR SAFING SENSOR SHORT OR FORWARD CRASH SENSOR INPUT SHORT		
<ul style="list-style-type: none"> • Check voltage at back of diagnostic monitor connector Circuit 617 (Pin 17, PK/O) and to ground. • Is voltage less than one volt? 		Yes	GO to 4.8.
		No	A short to B + exists in the forward crash sensor input Circuits 615 (GY/W), 616 (PK/BK), 617 (PK/O), 619 (PK/W), or 621 (W/Y). DISCONNECT diagnostic monitor and CHECK for voltage on these circuits. If no short to B + exists, REPLACE diagnostic monitor. RECONNECT system. REACTIVATE system. VERIFY Air Bag lamp.

DIAGNOSIS AND TESTING (Continued)

Fault Indication — Air Bag Lamp Flashes Four Times

Probable Fault — Potential Short in Air Bag Deployment Circuit

TEST STEP		RESULT	ACTION TO TAKE
4.8	CHECK CIRCUIT 623 (P/W)		
	<ul style="list-style-type: none"> • Disconnect rear safing sensor. • With voltmeter, probe wiring connector Circuit 623 (P/W) to ground. • Is 623 at battery voltage? 	Yes	GO to 4.10.
		No	GO to 4.9.
4.9	CHECK 623 OPEN		
	<ul style="list-style-type: none"> • With voltmeter, check wiring harness side of connector to diagnostic monitor, Circuit 623 (Pin 12, P/W). • Is 623 at battery voltage? 	Yes	SERVICE open in Circuit 623 (P/W) between diagnostic monitor and rear sensor. RECONNECT system. REACTIVATE system. VERIFY lamp.
		No	REPLACE diagnostic monitor.
4.10	CHECK CIRCUIT 623 SHORT TO BATTERY POSITIVE (B+)		
	<ul style="list-style-type: none"> • Disconnect diagnostic monitor. • With voltmeter, check rear safing sensor wiring connector Circuit 623 (P/W) and to ground. • Is 623 still at battery voltage? 	Yes	Short to B+ exists in Circuit 623 between diagnostic monitor and rear safing sensor. TRACE circuit and SERVICE. If no short exists, REPLACE diagnostic monitor. RECONNECT system. REACTIVATE system. VERIFY Air Bag lamp.
		No	RECONNECT diagnostic monitor. GO to 4.11.
4.11	CHECK REAR SAFING SENSOR OR CIRCUIT 614		
	<ul style="list-style-type: none"> • With diagnostic module reconnected, check rear safing sensor resistance between Circuits 623 (P/W) and 614 (BY/O). • Is resistance less than one ohm? 	Yes	GO to 4.12.
		No	REPLACE rear safing sensor. RECONNECT system. REACTIVATE system. VERIFY Air Bag lamp.

DIAGNOSIS AND TESTING (Continued)

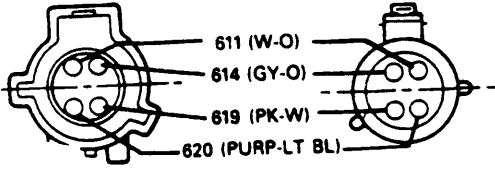

Fault Indication — Air Bag Lamp Flashes Four Times
Probable Fault — Potential Short in Air Bag Deployment Circuit

TEST STEP		RESULT	ACTION TO TAKE
4.12	CONTINUE REAR SAFING SENSOR CHECKS		
<ul style="list-style-type: none">• Check rear safing sensor resistance between Circuit 623 (P/W) and Circuits 611 (W/O), 612 (P/O), and 613 (DB/W).• Are all paths open circuits (off scale)?		Yes	An open exists in 614 (GY/O) between the rear safing sensor and the diagnostic monitor Pins 8 or 11. FIND open and SERVICE. If no open exists, REPLACE diagnostic monitor. RECONNECT system. REACTIVATE system. VERIFY Air Bag lamp.
		No	REPLACE rear safing sensor. RECONNECT system. REACTIVATE system. VERIFY Air Bag lamp.

DIAGNOSIS AND TESTING (Continued)

Fault Indication — Air Bag Lamp Flashes Five Times

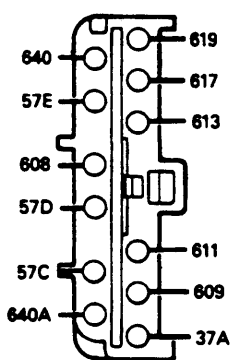

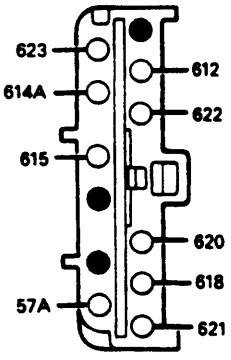

Probable Fault — Forward Crash Sensor Or Ignition Circuit Shorted to Ground

	FRONT CENTER SENSOR 																		

DIAGNOSIS AND TESTING (Continued)

Fault Indication — Air Bag Lamp Flashes Five Times

Probable Fault — Shorted Forward Crash Sensor Deployment Circuit

TEST STEP			RESULT	ACTION TO TAKE
5.4	CHECK RESISTANCE IN CIRCUITS 617 (PK/O), 619 (PK/W) AND 621 (W/Y)		Yes	TRACE appropriate circuit(s) to find contact to ground and SERVICE. RECONNECT system. VERIFY Air Bag lamp. If lamp flashes fault code 10, INSTALL a new diagnostic monitor. REACTIVATE system. VERIFY Air Bag lamp.
<ul style="list-style-type: none">• Disconnect diagnostic monitor.• Perform all three of the following tests.• Attach ohmmeter to ground and to appropriate pin on the diagnostic monitor wiring connector.				
Pin No.	Circuit	Wire Color		
17	617	PK/O		
18	619	PK/W		
19	621	W/Y		
<ul style="list-style-type: none">• Is resistance less than 1 ohm for any test? <div><p>DIAGNOSTIC MONITOR CONNECTOR — GRAY</p></div> <div><p>DIAGNOSTIC MONITOR CONNECTOR — BLACK</p></div>			Resistance is 1 ohm or greater	GO to 5.5.
5.5	CHECK CIRCUIT 615 (GY/W) BETWEEN MONITOR AND DRIVER AIR BAG			
<ul style="list-style-type: none">• Remove jumper in wiring connector to driver air bag. Leave open.• Fault code should change to Code 4 or Code 6.			Code 6	GO to 5.6.
			Code 4	GO to 5.7.

DIAGNOSIS AND TESTING (Continued)

Fault Indication — Air Bag Lamp Flashes Five Times

Probable Fault — Forward Crash Sensor or Igniter Circuit Shorted to Ground

TEST STEP		RESULT	ACTION TO TAKE
5.6	CHECK CLOCKSPrING		
<ul style="list-style-type: none"> • Short to ground in Circuit 615 (GY/W) between driver air bag and diagnostic monitor. • Disconnect clockspring connector to 14401 at base of column. • Jumper wiring connector Circuits 614 (GY/O) and 615 (GY/W). • Verify lamp. Does lamp flash code 6? 		Yes	TRACE and SERVICE Circuit 615 short to ground between clockspring and diagnostic monitor. If code 10 is present, or no short exists, REPLACE diagnostic monitor.
		No lamp goes out	REPLACE clockspring. RECONNECT system. If code 10 is present, REPLACE monitor. VERIFY Air Bag lamp.
5.7	SHORT IN CIRCUIT 614 (GY/O) OR 623 (P/W) CHECK CIRCUIT 614 (GY/O)		
<ul style="list-style-type: none"> • Disconnect rear safing sensor. • With an ohmmeter, check Circuit 614 (GY/O) Pin 11 and ground. • Is resistance less than 1 ohm? 		Yes	A short to ground exists in Circuit 614 (GY/O) between safing sensors, air bag and Pin 11 of diagnostic monitor. TRACE short to ground. REPAIR as required. RECONNECT and REACTIVATE system. VERIFY lamp. If no short is found, or code 10 is present, replace diagnostic module.
		No	GO to 5.8.
5.8	CHECK CIRCUIT 623 (P/W) PIN 12		
<ul style="list-style-type: none"> • With an ohmmeter check Circuit 623 (P/W) Pin 12 and ground. • Is resistance less than 1 ohm? 		Yes	TRACE short to ground in Circuit 623 (P/W). REPAIR as required. RECONNECT and REACTIVATE system. VERIFY lamp. If code 10 exists, REPLACE monitor.
		No	GO to 5.9.

DIAGNOSIS AND TESTING (Continued)

Fault Indication — Air Bag Lamp Flashes Five Times
Probable Fault — Forward Crash Sensor or Igniter Circuit Shorted to Ground

TEST STEP		RESULT	ACTION TO TAKE
5.9	CHECK REAR SAFING SENSOR		
<ul style="list-style-type: none">• With an ohmmeter, check Circuit 623 (P/W) in sensor connector and ground. (With sensor attached to vehicle.)• Is resistance less than 1 ohm?		Yes	REPLACE rear safing sensor. If code 10 exists, REPLACE diagnostic monitor. RECONNECT and REACTIVATE system. VERIFY Air Bag lamp.
		No	REPLACE diagnostic monitor. RECONNECT and REACTIVATE system. VERIFY Air Bag lamp.

DIAGNOSIS AND TESTING (Continued)

Fault Indication — Air Bag Lamp Flashes Six Times

Probable Fault — Driver Air Bag Circuit Inoperative

TEST STEP		RESULT	ACTION TO TAKE
6.0	DURING SYSTEM PROVE-OUT AIR BAG LAMP PROVIDES A FAULT CODE OF 6 FLASHES		
6.1	CHECK DRIVER AIR BAG		
	<ul style="list-style-type: none"> Deactivate air bag system. Verify Air Bag lamp while slowly rotating the steering wheel assembly. Does the Air Bag lamp still flash fault code 6 and/or flash intermittently? 	Yes No	GO to 6.2. DISCONNECT battery ground cable and power supply. REMOVE jumper wire. INSTALL a new driver air bag. RECONNECT system. VERIFY Air Bag lamp.
6.2	CHECK CLOCKSPRING		
	<ul style="list-style-type: none"> Disconnect Air Bag clockspring wiring connector at base of column. Place a jumper wire across Circuits 614 (GY/O) and 615 (PK) of the wiring connector. Verify Air Bag lamp. Does the Air Bag lamp still flash fault code 6? 	Yes No	GO to 6.3. DISCONNECT battery ground cable and power supply. REMOVE jumper wire from air bag clockspring wiring connector. INSTALL new clockspring. RECONNECT system. VERIFY Air Bag lamp. REACTIVATE system.
6.3	CHECK AIR BAG DIAGNOSTIC MONITOR CONNECTORS		
	<ul style="list-style-type: none"> Remove jumper wire from air bag clockspring wiring connector. Disconnect diagnostic monitor connectors. Before continuing, visually inspect connector to ensure that Pin 11, Circuit 614 (GY/O) and Pin 10, Circuit 615 (PK) are touching. Attach ohmmeter to Pin 11, Circuit 614 (GY/O) on the diagnostic monitor wiring connector and to Circuit 614 (PK) clockspring wiring connector. Is resistance less than 1 ohm? 	Yes No	GO to 6.4. TRACE Circuit 614 (GY/O) from clockspring wiring connector to diagnostic monitor connector to locate and SERVICE open circuit. RECONNECT system. REACTIVATE air bag system. VERIFY Air Bag lamp.

DIAGNOSIS AND TESTING (Continued)

Fault Indication — Air Bag Lamp Flashes Six Times
Probable Fault — Driver Air Bag Circuit Inoperative

TEST STEP		RESULT	ACTION TO TAKE
6.4	CHECK RESISTANCE IN CIRCUITS		
<ul style="list-style-type: none">• Attach ohmmeter to Pin 10. Circuit 615 (GY/N) on diagnostic monitor wiring connector and to Circuit 615 (PK) on the clockspring connector.• Is resistance less than 1 ohm?		Yes	INSPECT connector for properly seated pins. If okay, INSTALL a new diagnostic monitor. RECONNECT system. REACTIVATE system. VERIFY Air Bag lamp.
		No	TRACE Circuit 615 (GY/W) from clockspring connector to diagnostic monitor assembly to find open and SERVICE. RECONNECT system. REACTIVATE system. VERIFY Air Bag lamp.

DIAGNOSIS AND TESTING (Continued)

Fault Indication — Air Bag Lamp Flashes Seven Times

Probable Fault — Passenger Air Bag Circuit Inoperative

TEST STEP		RESULT	ACTION TO TAKE
7.0	DURING SYSTEM PROVE OUT AIR BAG LAMP PROVIDES A FAULT INDICATION OF 7 FLASHES.		
7.1	VERIFY AIR BAG LAMP		
	<ul style="list-style-type: none"> Deactivate passenger air bag. Verify Air Bag lamp. 	Air Bag lamp still flashes fault code 7 Air Bag lamp does not flash fault code 7	GO to 7.2. DISCONNECT battery ground cable and power supply. REMOVE jumper wire used in deactivation of passenger air bag. REPLACE passenger air bag. RECONNECT system. REACTIVATE system. VERIFY Air Bag lamp.
7.2	CHECK DIAGNOSTIC MONITOR CONNECTOR		
	<ul style="list-style-type: none"> Deactivate driver air bag. Remove jumper wire from passenger air bag wiring connector. Disconnect diagnostic monitor. Visually inspect the monitor wiring connector to be sure Pin 8 Circuit 614 (GY/O) and Pin 9 Circuit 616 (PK/BK) are touching. 	Pins are not touching Pins are touching as required	SERVICE or REPLACE connector as required. RECONNECT system. REACTIVATE Air Bag system (passenger and driver). VERIFY Air Bag lamp. GO to 7.3.
7.3	CHECK RESISTANCE IN CIRCUIT 614 (GY/O)		
	<ul style="list-style-type: none"> Using an ohmmeter, attach a lead to Pin 8 Circuit 614 (GY/O) on the monitor wiring connector and the other lead to Circuit 614 (GY/O) on the passenger air bag wiring connector to find the resistance. 	Resistance is less than one ohm Resistance is one ohm or greater	GO to 7.4. TRACE Circuit 614 (GY/O) from passenger air bag wiring connector to LOCATE and SERVICE open circuit. RECONNECT system. REACTIVATE air bag system (passenger and driver). VERIFY Air Bag lamp.

DIAGNOSIS AND TESTING (Continued)

Fault Indication — Air Bag Lamp Flashes Seven Times

Probable Fault — Passenger Air Bag Circuit Inoperative

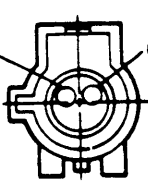

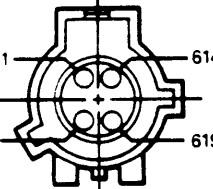

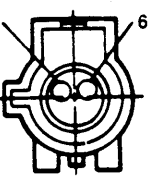

TEST STEP		RESULT	ACTION TO TAKE
7.4	CHECK RESISTANCE IN CIRCUIT 616 (PK/BK)		
<ul style="list-style-type: none"> Using an ohmmeter, attach a lead to Pin 9 Circuit 614 (BY/O) on the monitor wiring connector and the other lead to Circuit 616 (PK/BK) on the Passenger Air Bag wiring connector to find resistance. 		Resistance is less than one ohm	REPLACE diagnostic monitor. RECONNECT system. REACTIVATE Air Bag system (Passenger and Driver). VERIFY Air Bag lamp.
		Resistance is one ohm or greater	TRACE Circuit 616 (PK/BK) from Passenger Air Bag wiring connector to monitor wiring connector to LOCATE and SERVICE open circuit. RECONNECT system. REACTIVATE Air Bag system (Passenger and Driver). VERIFY Air Bag lamp.

CR6187-A

DIAGNOSIS AND TESTING (Continued)

Fault Indication — Air Bag Lamp Flashes Eight Times

Probable Fault — Forward Crash Sensor Improperly Attached or Ground

TEST STEP		RESULT	ACTION TO TAKE												
8.0	DURING SYSTEM PROVE-OUT AIR BAG LAMP PROVIDES A FAULT INDICATION OF 8 FLASHES														
8.1	INSPECT FRONT SENSORS														
<ul style="list-style-type: none">• Visually inspect each front sensor to ensure they are attached (properly grounded) to the vehicle.• Are all sensors properly attached to vehicle?		Yes	GO to 8.2.												
		No	ATTACH sensor(s) properly. VERIFY Air Bag lamp.												
8.2	INSPECT EACH SENSOR'S WIRING CONNECTORS														
<ul style="list-style-type: none">• Visually check each front sensor connector for proper connection to the vehicle wiring.• Are all sensors properly connected?		Yes	GO to 8.3.												
		No	CONNECT sensor(s) properly. VERIFY Air Bag lamp.												
8.3	CHECK FOR RESISTANCE IN FRONT SENSORS														
<ul style="list-style-type: none">• Disconnect battery ground and power supply.• Disconnect all front sensors.• Perform the following tests.• Attach an ohmmeter to ground and to appropriate pin on each front sensor connector.		Yes	GO to 8.4.

DIAGNOSIS AND TESTING (Continued)

Fault Indication—Air Bag Lamp Flashes 10 Times**Probable Fault:**

- Firing circuit disarm device blown due to deployment circuit shorted to ground.

NOTE: A thermal fuse is built into the diagnostic monitor that opens the battery and power supply circuit to the air bag should a short occur in the air bag deployment circuit without a safing sensor being closed. This prevents unwanted air bag deployment due to damaged vehicle wiring.

The Code 10 is a result of a short to ground, as described in the diagnosis for a Code 5. Code 10 is normally found after repair of a Code 5 condition. If the Code 5 is intermittent, just the Code 10 may be showing. Always look for shorts before repairing the Code 10, (replacing the diagnostic monitor. **Since the thermal fuse is built into the diagnostic monitor, the monitor must be replaced to repair a Code 10. Refer to Code 5 diagnosis.**

Ford Crown Victoria/Mercury Grand Marquis

NOTE: The following diagnosis and testing procedures cover Ford Crown Victoria and Mercury Marquis vehicles with driver air bag only. For Diagnosis of Lincoln Town Car, refer to Diagnosis and Testing, Lincoln Town Car in this Section.

FAULT CODE PRIORITIES

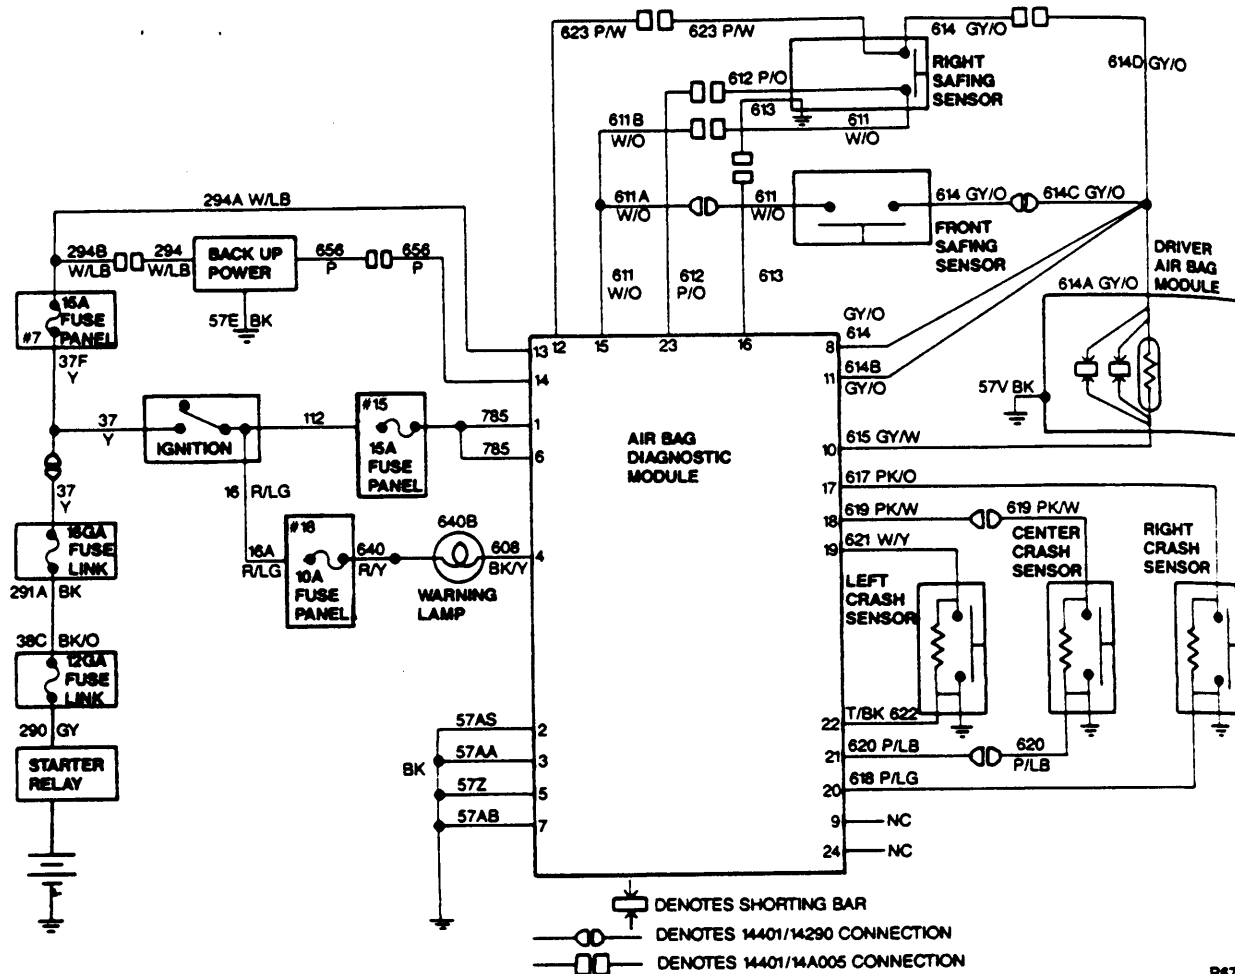

Number of Flashes	Probable Fault
No Lamp	Inoperative air bag indicator lamp circuit
Continuous Lamp	Faulty monitor or disconnected or loose monitors
3	Loss of air bag deployment circuit power. Backup power supply disconnected
5	Shorted forward impact sensor deployment circuit or potential short in air bag deployment circuit
10	Faulty firing circuit disarm device
4	Potential short in air bag deployment circuit. Must use Diagnosis Guide No. 4 for diagnosis
6	Driver air bag circuit inoperative
7	Passenger air bag circuit inoperative
8	Forward impact sensor improperly attached or grounded
9	Open forward impact sensor deployment circuit
2	All forward impact sensors disconnect

Probable Fault — Inoperative Air Bag Lamp Circuit

TEST STEP	RESULT	ACTION TO TAKE
<p>A5 CHECK CIRCUIT 640 (R/Y) FOR OPEN CIRCUIT</p> <ul style="list-style-type: none"> • Turn ignition switch to OFF. • Deactivate air bag system. • Remove warning lamps fuse. • Attach ohmmeter to Circuit 640 (R/Y) at fuse panel and cluster wiring connector. • Is resistance less than 1 ohm? <div style="display: flex; justify-content: space-around;">   </div>	<p>Yes</p> <p>No</p>	<p>REPLACE bulbs and/or cluster printed circuit as required.</p> <p>REACTIVATE system and VERIFY warning lamps.</p> <p>TRACE Circuit 640 (R/Y) from Cluster connector to fuse panel to find open in circuit, and REPAIR.</p> <p>REACTIVATE air bag system and VERIFY warning lamps.</p>
<p>A6 CHECK THAT MONITOR CONNECTOR IS PROPERLY CONNECTED</p> <ul style="list-style-type: none"> • Are the diagnostic monitor connectors properly connected? <div style="display: flex; justify-content: space-around;">   </div> <p style="text-align: center;">DIAGNOSTIC MONITOR CONNECTOR (GRAY) DIAGNOSTIC MONITOR CONNECTOR (BLACK)</p>	<p>Yes</p> <p>No</p>	<p>GO to A7.</p> <p>Properly connect diagnostic monitor connectors. VERIFY Air Bag lamp. If Air Bag lamp does not light GO to A8.</p>

DIAGNOSIS AND TESTING (Continued)

Fault Indication — Air Bag Lamp Does Not Light

Probable Fault — Inoperative Air Bag Lamp Circuit

TEST STEP		RESULT	ACTION TO TAKE
A7	CHECK LAMP WITH MONITOR CONNECTOR DISCONNECTED		
<ul style="list-style-type: none"> • Turn ignition switch to OFF. • Disconnect diagnostic monitor wiring from monitor assembly. • Turn ignition switch to RUN. • Is the air bag lamp continuously on? 		No	GO to A8.
		Yes	GO to A9.
A8	CHECK MONITOR CONNECTOR		
<ul style="list-style-type: none"> • Turn ignition switch to OFF. • Deactivate air bag system. • Visually inspect the monitor connector to be sure Pin 5 (Circuit 57, BK) and Pin 4 (Circuit 608, BK/Y) are touching each other. • Turn ignition switch to RUN. • Does air bag lamp flash continuously? 		Yes	GO to A9.
		No	GO to A10.

DIAGNOSIS AND TESTING (Continued)

Fault Indication — Air Bag Lamp Does Not Light

Probable Fault — Inoperative Air Bag Lamp Circuit

TEST STEP		RESULT	ACTION TO TAKE
A9	CHECK CIRCUIT 298 (P/O)		
<ul style="list-style-type: none"> • Turn ignition switch to OFF. • Deactivate air bag system. • Attach voltmeter to Pin 6 (Circuit 785) on monitor wiring connector and to ground. • Turn ignition switch to RUN. • Is voltage greater than 10 volts? 		Yes	TURN ignition switch to OFF. REPLACE diagnostic monitor. REACTIVATE air bag system. TURN ignition switch to RUN. VERIFY Air Bag warning lamp.
		No	TURN ignition switch to OFF. CHECK fuse No. 15 (15 amp). REPLACE fuse if blown and/or trace Circuit 785 from monitor wiring connector Pin 6 to fuse panel to find open and/or short to ground, and REPAIR. REACTIVATE air bag system. Turn ignition to RUN. VERIFY Air Bag warning lamp.
A10	JUMP CIRCUIT 57 (BK)		
<ul style="list-style-type: none"> • Reconnect diagnostic monitor assembly connector. • Attach a jumper wire to Pin 5 (Circuit 57, BK) through back of monitor wiring connector and to ground. • Does Air Bag lamp light? 		Yes	TURN ignition to OFF. REMOVE jumper wire. SERVICE ground circuit. REACTIVATE air bag system. TURN ignition switch to RUN. VERIFY Air Bag warning lamp.
		No	GO to A11.

41-58-50

DIAGNOSIS AND TESTING (Continued)

Fault Indication — Air Bag Lamp Does Not Light

Probable Fault — Inoperative Air Bag Lamp Circuit

TEST STEP		RESULT	ACTION TO TAKE
A11	INSPECT CLUSTER PRINTED CIRCUIT	Yes	REPLACE printed circuit, connector and/or bulb as required. ACTIVATE air bag system. TURN ignition switch to RUN. VERIFY Air Bag warning lamp.
		No	TRACE Circuit 608 (BK/Y) from cluster to find open and SERVICE. REACTIVATE air bag system. TURN ignition to RUN. VERIFY Air Bag warning lamp.

AIR BAG BAG MONITOR CONNECTORS

DIAGNOSIS AND TESTING (Continued)

Fault Indication — Air Bag Lamp Stays On

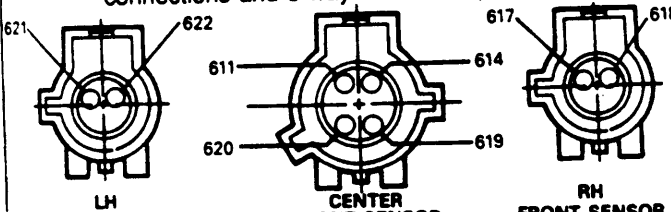

Probable Fault — Diagnostic Module Fault

TEST STEP		RESULT	ACTION TO TAKE
B0	DURING SYSTEM PROVE-OUT AIR BAG LAMP STAYS ON		
B1	CHECK DIAGNOSTIC MONITOR		
	<ul style="list-style-type: none"> Visually inspect diagnostic monitor for proper connection to monitor wiring connector. Is diagnostic monitor properly connected? 	Yes No	GO to B2. SERVICE connector. VERIFY Air Bag lamp.
B2	CHECKING DIAGNOSTIC MONITOR — CONTINUED		
	<ul style="list-style-type: none"> Disconnect diagnostic monitor. Insert toothpick or other non-conducting object into wiring connector between Pins 4 and 5 to depress shorting bar between the two terminals. Verify Air Bag lamp. Is Air Bag lamp still on? 	No Yes	REPLACE diagnostic monitor. RECONNECT system. VERIFY Air Bag lamp. TRACE Circuit 608 (BK/Y) from diagnostic monitor to find contact to ground and SERVICE. RECONNECT system. VERIFY Air Bag lamp.

DIAGNOSIS AND TESTING (Continued)

Fault Indication — Air Bag Lamp Flashes Two Times

Probable Fault — All Forward Crash Sensors Disconnected

TEST STEP		RESULT	ACTION TO TAKE
2.0	DURING SYSTEM PROVE-OUT AIR BAG LAMP PROVIDES A FAULT INDICATOR OF 2 FLASHES		
2.1	INSPECT FRONT SENSORS		
	<ul style="list-style-type: none"> Visually inspect all three front sensor assembly connections and 8-way connector (on fuse panel).  <p style="text-align: center;">LH CENTER RH FRONT SENSOR FRONT SENSOR FRONT SENSOR</p>	<p>All three sensors are properly connected</p> <p>One or all sensors are not properly connected</p>	<p>GO to 2.2.</p> <p>Properly connect the sensor(s) or 8-way connector. VERIFY Air Bag lamp.</p>
2.2	INSPECT WIRING CONNECTORS		
	<ul style="list-style-type: none"> Deactivate air bag system. Disconnect diagnostic monitor. Visually inspect monitor wiring connector for proper connection at Pin numbers: 17 (617, PK/O) 18 (619, PK/W) 20 (618, P/LG) 21 (620, P/LB) 22 (622, T/BK) 19 (621, W/Y) Are all connections made? 	<p>Yes</p> <p>No</p>	<p>GO to 2.3.</p> <p>SERVICE connections. RECONNECT system. VERIFY Air Bag lamp. REACTIVATE system.</p>

DIAGNOSIS AND TESTING (Continued)

Fault Indication — Air Bag Lamp Flashes Two Times

Probable Fault — All Forward Crash Sensors Disconnected

TEST STEP				RESULT	ACTION TO TAKE
2.3 CHECK RESISTANCE IN DIAGNOSTIC MONITOR CIRCUITS					
<ul style="list-style-type: none"> Perform all of the following circuit tests with monitor disconnected. Attach the lead of the ohmmeter to each set of pins indicated on the diagnostic monitor wiring connector to check the resistance between them. 				Yes	REPLACE diagnostic monitor. VERIFY Air Bag lamp. REACTIVATE system.
				Resistance is NOT between 1000-1300 ohms on one or more of the tests.	TRACE appropriate circuit(s) and find open and SERVICE. CONNECT diagnostic monitor. VERIFY Air Bag lamp. REACTIVATE system.
Pin A	Pin B	Corresponding Sensor	Circuits		
17	20	Right	617 (PK/O)/ 618 (P/LG)		
19	22	Left	621 (W/Y)/ 622 (T/BK)		
18	21	Center	619 (PK/W)/ 620 (P/LB)		
<ul style="list-style-type: none"> Is the resistance between 1000-1300 ohms for each test?

Fault Indication — Air Bag Lamp Flashes Three Times
Probable Fault — Loss of Air Bag Circuit Deployment Power
and/or Backup Power Supply Disconnected

TEST STEP		RESULT	ACTION TO TAKE
3.4	CHECK RESISTANCE IN CIRCUIT 611 (W/O)		
<ul style="list-style-type: none"> Using an ohmmeter find resistance in Pin 15 Circuit 611 (W/O) on diagnostic monitor wiring connector and to ground. Is resistance less than 1 ohm? 		No	REPLACE diagnostic monitor. RECONNECT system. VERIFY Air Bag lamp. REACTIVATE system.
		Yes	GO to 3.5.
3.5	CHECK RESISTANCE IN CIRCUIT 611 (W/O) — CONTINUED		
<ul style="list-style-type: none"> Disconnect rear safing sensor. Attach ohmmeter to Pin 15 (Circuit 611, W/O) on diagnostic monitor wiring connector and to ground. Is resistance less than 1 ohm? 		No	GO to 3.7.
		Yes	GO to 3.6.
3.6	CHECK RESISTANCE IN CIRCUIT 611 (W/O) — CONTINUED		
<ul style="list-style-type: none"> Disconnect center front sensor. Attach ohmmeter to Pin 15 (611 W/O) on diagnostic monitor wiring connector and to ground. Is resistance less than 1 ohm? 		No	REPLACE center front sensor. REPLACE diagnostic monitor. RECONNECT system. VERIFY Air Bag lamp. REACTIVATE system.
		Yes	TRACE Circuit 611 (W/O) to find contact to ground and SERVICE. REPLACE diagnostic monitor. RECONNECT system. VERIFY Air Bag lamp. REACTIVATE system.

DIAGNOSIS AND TESTING (Continued)

Fault Indication — Air Bag Lamp Flashes Three Times **Probable Fault — Loss of Air Bag Circuit Deployment Power** **or Backup Power Supply Disconnected**

TEST STEP		RESULT	ACTION TO TAKE
3.7	CHECK RESISTANCE IN CIRCUIT 612 (P/O)		
<ul style="list-style-type: none"> • Attach ohmmeter to Circuit 612 (P/O) on rear safing sensor wiring connector and to ground. • Is resistance less than 1 ohm? 		No	<p>▶ REPLACE rear safing sensor. REPLACE diagnostic monitor. RECONNECT system. VERIFY Air Bag lamp. REACTIVATE system.</p>
 <p>REAR SAFING SENSOR CONNECTOR</p>		Yes	<p>▶ TRACE Circuit 612 (P/O) to find contact to ground and SERVICE. REPLACE diagnostic monitor. RECONNECT system. VERIFY Air Bag lamp. REACTIVATE system.</p>

DIAGNOSIS AND TESTING (Continued)

Fault Indication — Air Bag Lamp Flashes Four Times

Probable Fault — Potential Short in Air Bag Deployment Circuit

TEST STEP		RESULT	ACTION TO TAKE
4.0	DURING SYSTEM PROVE-OUT AIR BAG LAMP PROVIDES A FAULT INDICATION OF 4 FLASHES		
4.1	CHECK REAR SAFING SENSOR GROUND		
	<ul style="list-style-type: none"> Deactivate system. Place jumper wire on dash panel sensor Circuit 613 (DBW) and to ground. Verify lamp. Does Air Bag lamp flash code 4? 	Yes No	GO to 4.4. GO to 4.2.
4.2	CONTINUE REAR SAFING SENSOR CHECK		
	<ul style="list-style-type: none"> Remove jumper wire. Loosen and tighten rear safing sensor attaching screws. Turn ignition switch to RUN. Does Air Bag lamp flash code 4? 	Yes No	GO to 4.3. VERIFY air bag lamp.
4.3	CHECK SAFING SENSOR GROUND CIRCUIT		
	<ul style="list-style-type: none"> Turn ignition switch to OFF. Disconnect rear safing sensor wiring connector. Attach ohmmeter to Circuit 613 (DBW) in sensor connector and to ground. Is resistance less than one ohm? 	Yes No	INSPECT connector terminals and wires and SERVICE as required. REACTIVATE system. VERIFY Air Bag lamp. REPLACE rear safing sensor. REACTIVATE system. VERIFY Air Bag lamp.
4.4	CHECK 611 CIRCUIT IN CENTER FRONT SENSOR		
	<ul style="list-style-type: none"> Remove jumper wire. Disconnect center front sensor. Verify lamp. Does lamp flash code 4? 	Yes No	GO to 4.5. REPLACE center front sensor. RECONNECT system. VERIFY lamp. REACTIVATE system. VERIFY lamp.
4.5	CONTINUE CIRCUIT 611 CHECK		
	<ul style="list-style-type: none"> Check resistance between Circuit 611 (Pin 15) and 612 (Pin 23) at the back of the diagnostic monitor connector. Is resistance less than one ohm? 	Yes No	GO to 4.7. GO to 4.6.

DIAGNOSIS AND TESTING (Continued)

Fault Indication — Air Bag Lamp Flashes Four Times

Probable Fault — Potential Short in Air Bag Deployment Circuit

TEST STEP		RESULT	ACTION TO TAKE
4.6	CHECK 611 IN REAR SAFING SENSOR		
<ul style="list-style-type: none"> • Disconnect rear safing sensor. • Check resistance between Circuit 611 (W/O) and 612 (P/O). • Is resistance less than one ohm? 		Yes	<p>TRACE Circuits 611 and 612 back to diagnostic monitor for open circuit and SERVICE (check connectors and terminals to confirm proper connections). If no open circuit exists, REPLACE diagnostic monitor. RECONNECT system. REACTIVATE system. VERIFY Air Bag lamp.</p>
		No	<p>REPLACE rear safing sensor. RECONNECT system. REACTIVATE system. VERIFY Air Bag lamp.</p>
4.7	CHECK FOR REAR SAFING SENSOR SHORT OR FORWARD CRASH SENSOR INPUT SHORT		
<ul style="list-style-type: none"> • Check voltage at back of diagnostic module connector Circuit 617 (Pin 17, PK/O) and to ground. • Is voltage less than one volt? 		Yes	<p>GO to 4.8.</p>
		No	<p>A short to B+ exists in the forward crash sensor input Circuits 615 (GY/W), 616 (PK/BK), 617 (PK/O), 619 (PK/W), or 621 (W/Y). DISCONNECT diagnostic module and CHECK for voltage on these circuits. If no short to B+ exists, REPLACE diagnostic module. RECONNECT system. REACTIVATE system. VERIFY Air Bag lamp.</p>
4.8	CHECK CIRCUIT 623 (P/W)		
<ul style="list-style-type: none"> • Disconnect rear safing sensor. • With voltmeter, probe wiring connector Circuit 623 (P/W) to ground. • Is 623 at battery voltage? 		Yes	<p>GO to 4.10.</p>
		No	<p>GO to 4.9.</p>

DIAGNOSIS AND TESTING (Continued)

Fault Indication — Air Bag Lamp Flashes Four Times

Probable Fault — Potential Short in Air Bag Deployment Circuit

TEST STEP		RESULT	ACTION TO TAKE
4.9	CHECK 623 OPEN		
<ul style="list-style-type: none"> With voltmeter check voltage at back of diagnostic monitor connector, Circuit 623 (Pin 12, P/W). Is 623 at battery voltage? 		Yes	<ul style="list-style-type: none"> SERVICE open in Circuit 623 (P/W) between diagnostic monitor and rear sensor. RECONNECT system. REACTIVATE system. VERIFY lamp.
		No	<ul style="list-style-type: none"> REPLACE diagnostic monitor.
4.10	CHECK CIRCUIT 623 SHORT TO BATTERY POSITIVE (B+)		
<ul style="list-style-type: none"> Disconnect diagnostic monitor. With voltmeter, check rear safing sensor wiring connector Circuit 623 (P/W) and to ground. Is 623 still at battery voltage? 		Yes	<ul style="list-style-type: none"> Short to B+ exists in Circuit 623 between diagnostic monitor and rear safing sensor. TRACE circuit and SERVICE. If no short exists, REPLACE diagnostic monitor. RECONNECT system. VERIFY Air Bag lamp. REACTIVATE system. VERIFY Air Bag lamp.
		No	<ul style="list-style-type: none"> RECONNECT diagnostic monitor. GO to 4.11.
4.11	CHECK REAR SAFING SENSOR OR CIRCUIT 614		
<ul style="list-style-type: none"> With diagnostic monitor reconnected check rear safing sensor resistance between Circuits 623 (P/W) and 614 (BY/O). Is resistance less than one ohm? 		Yes	<ul style="list-style-type: none"> GO to 4.12.
		No	<ul style="list-style-type: none"> REPLACE rear safing sensor. RECONNECT system. REACTIVATE system. VERIFY Air Bag lamp.

DIAGNOSIS AND TESTING (Continued)

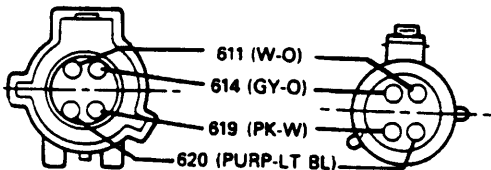

Fault Indication — Air Bag Lamp Flashes Four Times
Probable Fault — Potential Short In Air Bag Deployment Circuit

TEST STEP		RESULT	ACTION TO TAKE
4.12	CONTINUE REAR SAFING SENSOR CHECKS		
<ul style="list-style-type: none">• Check rear safing sensor resistance between Circuit 623 (P/W) and Circuits 611 (W/O), 612 (P/O), and 613 (DB/W).• Are all paths open circuits (off scale)?		Yes	▶ An open exists in Circuit 614 (GY/O) between the rear safing sensor and the diagnostic monitor, Pins 8 and 11. FIND open and SERVICE. If no open exists, REPLACE diagnostic monitor. RECONNECT system. REACTIVATE system. VERIFY Air Bag lamp.
		No	▶ REPLACE rear safing sensor. RECONNECT system. REACTIVATE system. VERIFY Air Bag lamp.

DIAGNOSIS AND TESTING (Continued)

Fault Indication — Air Bag Lamp Flashes Five Times

Probable Fault — Forward Crash Sensor Or Ignition Circuit Shorted to Ground

TEST STEP		RESULT	ACTION TO TAKE

DIAGNOSIS AND TESTING (Continued)

Fault Indication — Air Bag Lamp Flashes Five Times

Probable Fault — Forward Crash Sensor or Igniter Circuit Shorted to Ground

TEST STEP		RESULT	ACTION TO TAKE
5.6	CHECK CLOCKSPrING		
<ul style="list-style-type: none"> • Short to ground in Circuit 615 (GY/W) between driver air bag and diagnostic monitor. • Disconnect clockspring connector to 14401 at base of column. • Jumper wiring connector Circuits 614 (GY/O) and 615 (GY/W). • Verify lamp. Does lamp flash code 6? 		Yes	TRACE and SERVICE Circuit 615 short to ground between clockspring and diagnostic monitor. If code 10 is present, or no short exists, REPLACE diagnostic monitor.
		No lamp goes out	REPLACE clockspring. RECONNECT system. If code 10 is present, REPLACE monitor. VERIFY Air Bag lamp.
5.7	SHORT IN CIRCUIT 614 (GY/O) OR 623 (P/W) CHECK CIRCUIT 614 (GY/O)		
<ul style="list-style-type: none"> • Disconnect rear safing sensor. • With an ohmmeter, check Circuit 614 (GY/O) Pin 11 and ground. • Is resistance less than 1 ohm? 		Yes	A short to ground exists in Circuit 614 (GY/O) between safing sensors, air bag and Pin 11 of diagnostic monitor. TRACE short to ground. REPAIR as required. RECONNECT and REACTIVATE system. VERIFY lamp. If no short is found, or code 10 is present, replace diagnostic module.
		No	GO to 5.8.
5.8	CHECK CIRCUIT 623 (P/W) PIN 12		
<ul style="list-style-type: none"> • With an ohmmeter check Circuit 623 (P/W) Pin 12 and ground. • Is resistance less than 1 ohm? 		Yes	TRACE short to ground in Circuit 623 (P/W). REPAIR as required. RECONNECT and REACTIVATE system. VERIFY lamp. If code 10 exists, REPLACE monitor.
		No	GO to 5.9.

DIAGNOSIS AND TESTING (Continued)

Fault Indication — Air Bag Lamp Flashes Five Times
Probable Fault — Forward Crash Sensor or Igniter Circuit Shorted to Ground

TEST STEP		RESULT	ACTION TO TAKE
5.9	CHECK REAR SAFING SENSOR		
<ul style="list-style-type: none">• With an ohmmeter, check Circuit 623 (P/W) in sensor connector and ground. (With sensor attached to vehicle.)• Is resistance less than 1 ohm?		Yes	REPLACE rear safing sensor. If code 10 exists, REPLACE diagnostic monitor. RECONNECT and REACTIVATE system. VERIFY Air Bag lamp.
		No	REPLACE diagnostic monitor. RECONNECT and REACTIVATE system. VERIFY Air Bag lamp.

DIAGNOSIS AND TESTING (Continued)

Fault Indication — Air Bag Lamp Flashes Six Times Probable Fault — Driver Air Bag Circuit Inoperative

TEST STEP		RESULT	ACTION TO TAKE
6.0	DURING SYSTEM PROVE-OUT AIR BAG LAMP PROVIDES A FAULT CODE OF 6 FLASHES		
6.1	CHECK CLOCKSPRING		
	<ul style="list-style-type: none"> Deactivate air bag system. Verify air bag lamp while slowly rotating the steering wheel assembly. Does the air bag lamp still flash fault code 6 and/or flash intermittently? 	Yes No	GO to 6.2. DISCONNECT battery ground cable and backup power supply. REMOVE jumper wire. INSTALL a new driver air bag. RECONNECT system. VERIFY air bag lamp.
6.2	CHECK SLIP RING — CONTINUED		
	<ul style="list-style-type: none"> Disconnect air bag clockspring wiring connector at base of steering column. Place a jumper wire across Circuits 614 (GY/O) and 615 (PK) of the clockspring connector. Verify air bag lamp. Does the air bag lamp still flash fault code 6? 	Yes No	GO to 6.3. DISCONNECT battery ground cable and backup power supply. REMOVE jumper wire from air bag clockspring wiring connector. INSTALL new clockspring. RECONNECT system. VERIFY air bag lamp. REACTIVATE system.
6.3	CHECK AIR BAG DIAGNOSTIC MONITOR CONNECTORS		
	<ul style="list-style-type: none"> Remove jumper wire from air bag clockspring wiring connector. Disconnect diagnostic monitor connectors. Before continuing, visually inspect connector to ensure that Pin 11, Circuit 614 (GY/O) and Pin 10, Circuit 615 (GY/W) are touching. Attach ohmmeter to Pin 11, Circuit 614 (GY/O) on the monitor wiring connector and to the (GY/O) clockspring wiring connector. Is resistance less than 1 ohm? 	Yes No	GO to 6.4. TRACE circuit 614 (GY/O) from clockspring wiring connector to diagnostic monitor connector to locate and SERVICE open circuit. RECONNECT system. REACTIVATE air bag system. VERIFY air bag lamp.

DIAGNOSIS AND TESTING (Continued)

Fault Indication — Air Bag Lamp Flashes Six Times
Probable Fault — Driver Air Bag Circuit Inoperative

TEST STEP		RESULT	ACTION TO TAKE
6.4	CHECK RESISTANCE IN CIRCUITS		
<ul style="list-style-type: none">• Attach ohmmeter to Pin 11, Circuit 614 (GY/O) on diagnostic monitor wiring connector and to Circuit 615 (GY/W) on the clockspring connector.• Is resistance less than 1 ohm?		Yes	INSTALL a new diagnostic monitor. RECONNECT system. REACTIVATE system. VERIFY Air Bag lamp.
		No	TRACE Circuit 615 (GY/W) from clockspring connector to diagnostic monitor to find open and SERVICE. RECONNECT system. REACTIVATE system. VERIFY Air Bag lamp.

DIAGNOSIS AND TESTING (Continued)

Fault Indication — Air Bag Lamp Flashes Seven Times

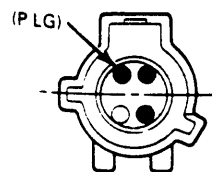

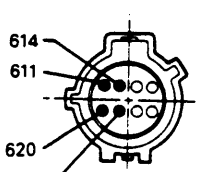

Probable Fault — Monitor Wiring Circuit Inoperative

TEST STEP		RESULT	ACTION TO TAKE
7.0	DURING SYSTEM PROVE-OUT AIR BAG LAMP PROVIDES A FAULT INDICATION OF 7 FLASHES		
7.1	VERIFY AIR BAG LAMP		
	<ul style="list-style-type: none"> Deactivate air bag system. Visually inspect diagnostic monitor wiring connector. Reconnect diagnostic monitor wiring connector. Does the Air Bag lamp flash code 7? 	Yes No	GO to 7.2. REACTIVATE system. TURN ignition switch to RUN. VERIFY Air Bag lamp.
7.2	INSPECT DIAGNOSTIC MONITOR PIN 7; CIRCUIT 57		
	<ul style="list-style-type: none"> Disconnect diagnostic monitor. Inspect Pin 7, Circuit 57 (BK) in wiring connector for good connection to monitor. Is Pin 7 properly seated and good contact made? 	Yes No	GO to 7.3. SERVICE terminal and/or connector. RECONNECT diagnostic monitor. VERIFY Air Bag lamp.
7.3	INSPECT CIRCUIT 57		
	<ul style="list-style-type: none"> With ohmmeter, measure resistance from Pin 7, Circuit 57 (BK) to ground. Is resistance less than one ohm? 	Yes No	REPLACE diagnostic monitor. RECONNECT system. VERIFY Air Bag lamp. FIND open circuit and SERVICE. RECONNECT system. VERIFY Air Bag lamp.

DIAGNOSIS AND TESTING (Continued)

Fault Indication — Air Bag Lamp Flashes Eight Times

Probable Fault — Forward Crash Sensor Improperly Attached or Grounded

TEST STEP		RESULT	ACTION TO TAKE												
8.0	DURING SYSTEM PROVE-OUT AIR BAG LAMP PROVIDES A FAULT INDICATION OF 8 FLASHES														
8.1	INSPECT FRONT SENSORS	Yes No	GO to 8.2. ATTACH sensor(s) properly. VERIFY Air Bag lamp.												
<ul style="list-style-type: none">Visually inspect each front sensor to ensure they are attached (properly grounded) to the vehicle.Are all sensors properly attached to vehicle?															
8.2	INSPECT EACH SENSOR'S WIRING CONNECTORS	Yes No	GO to 8.3. CONNECT sensor(s) properly. VERIFY Air Bag lamp.												
<ul style="list-style-type: none">Visually check each front sensor connector for proper connection to the vehicle wiring.Are all sensors properly connected?

DIAGNOSIS AND TESTING (Continued)

Fault Indication — Air Bag Lamp Flashes Eight Times

Probable Fault — Forward Crash Sensor Improperly Attached or Grounded

TEST STEP			RESULT	ACTION TO TAKE
8.4	CHECK FOR RESISTANCE IN CIRCUITS 618 (P/LG), 620 (P/LB) AND 622 (T/BK)		Yes	INSPECT terminals in diagnostic monitor connector and SERVICE as required. If terminals and connections are OK, INSTALL a new diagnostic monitor. RECONNECT system. VERIFY Air Bag lamp.
<ul style="list-style-type: none">Reconnect all front sensors.Perform all three of the following tests.Attach ohmmeter to ground and to appropriate pin on diagnostic monitor connector. Probe back of connector.				
Pin No.	Circuit	Wire Color	No	TRACE appropriate circuit(s) to find open(s) and SERVICE. RECONNECT system. VERIFY Air Bag lamp.
20	618	P/LG		
21	620	P/LB		
22	622	T/BK		
<ul style="list-style-type: none">Is the resistance less than 1 ohm for each test?				

DIAGNOSIS AND TESTING (Continued)

Fault Indication — Air Bag Lamp Flashes Nine Times

Probable Fault — Open Forward Crash Sensor Deployment Circuit

TEST STEP			RESULT	ACTION TO TAKE												
9.0 DURING SYSTEM PROVE-OUT AIR BAG LAMP PROVIDES A FAULT INDICATION OF 9 FLASHES																
9.1	INSPECT EACH FRONT SENSOR CONNECTOR TO VEHICLE WIRING															
<ul style="list-style-type: none">• Visually inspect each front sensor, left, right, and center for a proper connection to the vehicle wiring.• Are all sensors properly connected?			Yes	GO to 9.2.												
			No	CONNECT sensor(s) properly. VERIFY air bag lamp.												
9.2	CHECK RESISTANCE OF EACH FRONT SENSOR															
<ul style="list-style-type: none">• Disconnect battery ground cable and power supply.• Disconnect all front sensors.• Perform all three of the following tests on all three of the front sensors.• Attach ohmmeter to ground and to appropriate pin on front sensor connector.			Yes	GO to 9.3.												
			No	REPLACE those sensors that did not have a resistance between 1000-1300 ohms. RECONNECT system. VERIFY air bag lamp.												
<table><tr><th>Sensor</th><th>Circuit</th><th>Wire Color</th></tr><tr><td>Right</td><td>617</td><td>PK/O</td></tr><tr><td>Center</td><td>619</td><td>PK/W</td></tr><tr><td>Left</td><td>621</td><td>W/Y</td></tr></table>			Sensor	Circuit	Wire Color	Right	617	PK/O	Center	619	PK/W	Left	621	W/Y		
Sensor	Circuit	Wire Color														
Right	617	PK/O														
Center	619	PK/W														
Left	621	W/Y														
<ul style="list-style-type: none">• Is resistance of each sensor between 1000-1300 ohms for each test?																
9.3	CHECK RESISTANCE OF CIRCUITS 617 (PK/O), 619 (PK/W) AND 621 (W/Y)															
<ul style="list-style-type: none">• Reconnect front sensors.• Deactivate system.• Perform all three of the following tests.• Disconnect diagnostic monitor and attach ohmmeter to ground and to appropriate pin on diagnostic monitor wiring connector.			Yes	REPLACE diagnostic monitor. RECONNECT system. VERIFY air bag lamp. REACTIVATE system.												
			No	TRACE appropriate circuits to locate opens and SERVICE. RECONNECT system. VERIFY air bag lamp. REACTIVATE system.												
<table><tr><th>Pin No.</th><th>Circuit</th><th>Wire Color</th></tr><tr><td>17</td><td>617</td><td>PK/O</td></tr><tr><td>18</td><td>619</td><td>PK/W</td></tr><tr><td>19</td><td>621</td><td>W/Y</td></tr></table>			Pin No.	Circuit	Wire Color	17	617	PK/O	18	619	PK/W	19	621	W/Y

DIAGNOSIS AND TESTING (Continued)

**Fault Indication — Air Bag Lamp Flashes Three Times
Probable Fault — Loss of Air Bag Circuit Deployment Power
and/or Backup Power Supply Disconnected**

TEST STEP		RESULT	ACTION TO TAKE
3.4	CHECK RESISTANCE IN CIRCUIT 611 (W/O)		
<ul style="list-style-type: none"> Using an ohmmeter find resistance in Pin 15 Circuit 611 (W/O) on diagnostic monitor wiring connector and to ground. Is resistance less than 1 ohm? 		No	REPLACE diagnostic monitor. RECONNECT system. VERIFY Air Bag lamp. REACTIVATE system.
		Yes	GO to 3.5.
3.5	CHECK RESISTANCE IN CIRCUIT 611 (W/O) — CONTINUED		
<ul style="list-style-type: none"> Disconnect rear safing sensor. Attach ohmmeter to Pin 15 (Circuit 611, W/O) on diagnostic monitor wiring connector and to ground. Is resistance less than 1 ohm? 		No	GO to 3.7.
		Yes	GO to 3.6.
3.6	CHECK RESISTANCE IN CIRCUIT 611 (W/O) — CONTINUED		
<ul style="list-style-type: none"> Disconnect center front sensor. Attach ohmmeter to Pin 15 (611 W/O) on diagnostic monitor wiring connector and to ground. Is resistance less than 1 ohm? 		No	REPLACE center front sensor. REPLACE diagnostic monitor. RECONNECT system. VERIFY Air Bag lamp. REACTIVATE system.
		Yes	TRACE Circuit 611 (W/O) to find contact to ground and SERVICE. REPLACE diagnostic monitor. RECONNECT system. VERIFY Air Bag lamp. REACTIVATE system.
